Sir,—In reply to Mr. Thos. L. M. Gibson, who, by the way, does not appear to be a private member of the Auto Cycle Union, although so jealous of their interests, may I say that the Competitions Committee of the Auto Cycle Union—none of the members of which Committee are directly interested in the sale or manufacture of motor cycles—would gladly consider the promotion of a race for private owners if Mr. Gibson could show them by letter or, better still, by attendance before the Committee in person, that such a proposition is a practicable one. It would, I suggest, be necessary to satisfy the Committee on the following points:

(1.) The object of such a race.
(2.) The definition of a private owner.
(3.) The support such a race would receive.
(4.) Its financial aspect.

T. W. LOUGHBOROUGH,
Secretary, Auto Cycle Union.

### WHEN BORED WITH MAIN ROADS.

Sir,—I was much interested in Mr. Fincher's three "stunt" hills. Nos. 1 and 2 I know well, but I am not sure of No. 3. I usually go out on an A.B.C., but have now a 2¾ h.p. A.J.S. I have taken a Cubitt chassis up Crowell Hill on two occasions, but it was quite dry on each occasion.

There is a sloping grass track up Beacon Hill—Sheet 106. It starts half a mile from the Lambert Arms on the Stokenchurch Road. I have been down it once on a chassis, but should not care to repeat, but it should "go" on a solo taken upwards.

There is also an interesting grass path on the right, going half mile from Crowell towards and almost into Oakley. There is one stile, but a detour avoids it. The A.B.C. would not take the path direct, but the surface of the hill permits wide zigzags on the grass. T. S. SHARRATT.

Sir,—I know of a freak hill at South Harting, in Sussex, which I have never yet seen a machine climb—and I have seen several make attempts. I myself have tried several machines on the hill, without success. The entrance turns off the main road about one mile from South Harting, on the Midhurst and Elsted road. It lies at the foot of the Beacon Hill, on the main line of the South Downs. Not much trouble is experienced till after the second bend. The road is cut across by numerous water ruts, particularly on the top bend (approximately 1 in 3). The hill is about one mile long.

REGINALD S. FOWLER (R.A.F.).

Sir,—Mr. G. E. Meade gives a very interesting account of the hill included in the road from Topley Pike to Peak Forest Station, near Buxton. This hill is called Wormhill, and can only be likened to several worms tied in knots. Fortunately, it is exceedingly difficult of approach with a sidecar, as the nearest hospital is nearly four miles distant.

HAROLD KARSLAKE.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
New Edition. Just Published. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 5/-. By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of 'The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### BELT FOR VARIABLE PULLEY GEAR.

(1.) What do you consider the most suitable belt for a 3½ h.p. Rudge-Multi for general durability over hilly country? (2.) Does the one you recommend also prevent excessive belt slip in wet weather? (3.) I have had balata belts recommended. Do you consider them satisfactory?—R.H.F.

(1 and 2.) For obvious reasons we cannot undertake to recommend any particular accessory in preference to others of the same description on the market. You should get good results from almost any rubber belt of first-class make, especially if you use the Multi-gear exactly as recommended in the makers' handbook. (3.) Belts made of balata fabric are possibly more satisfactory in wet weather, but, generally speaking, the rubber belt is preferable on this particular machine.

### MACHINE FOR A MIDDLE-AGED RIDER.

For some months past I have been interested in following motor cycle matters through your pages, and should now be greatly obliged if you would kindly advise me as to the purchase of a machine. I have been a cyclist all my life, but have only ridden a motor cycle a few times during the last twelve months. My age is forty-five, and I want a machine filling the following requirements as far as they can be obtained in one costing from £60 to £70: Lightweight; an engine which (without a kick start) will start up quite easily; absence of vibration; sufficient horse-power to take a pillion passenger (9½ st.) occasionally (my weight is 10 st. 11 lb.). General ease, comfort, and reliability in riding; speed does not matter. It is essential that an effective windscreen can be fitted. I understand this is possible, and should like to know where such a screen can be obtained.—E.A.M.

We should recommend you to obtain a 2½ or 2¾ h.p. two-stroke machine with two-speed gear, clutch and kick-starter. There are several machines on the market with such a specification at about £70. Windscreens on touring solo machines cannot be recommended; they are only used in racing, when they may be fitted very low down on the handle-bars to afford protection to the rider, who assumes a position which would not be comfortable for any length of time in ordinary riding.

## Important Dates.

**Sat., Feb. 25th—Colmore Cup Trial.**
**Sat., Feb. 25th, to Sunday, Mar. 5th—Brussels Motor Cycle Show.**
**Wed., Mar. 1st, to Sun., Mar. 5th—Paris—Nice Trial.**
**Sun., Mar. 5th—Argenteuil Hill-climb (France).**
**Mon., Mar. 6th—La Turbie Hill-climb (Nice).**
**Wed., Mar. 15th—A.C.U. One-day Trial for Stock Machines.**
**Sat., Mar. 18th—Victory Cup Trial.**
**Thurs., Mar. 23rd—East Midland Centre A.C.U. Open Reliability Trial.**
**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Sat., April 1st—Western Centre A.C.U.—Open Reliability Trial.**
**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**
**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs. June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**

### LONG EXHAUST PIPES AGAIN!

Does a straight-through exhaust pipe 4ft. 6in. in length, without muffler of any kind, comply with the law when fitted to a 4 h.p. Triumph?—T.H.T.

The law requires that the exhaust gases shall be reasonably silenced by being passed through an expansion chamber or "other device" suitable for the purpose. A long exhaust pipe certainly does not give that degree of reasonable silence which the law was framed to obtain, and although the police in your district may not raise any objection, you are quite likely to find trouble in other districts away from your home if you do any extensive touring.

### FITTING DECOMPRESSORS.

I read in a handbook that a decompressor can be fitted to any make of engine. I have an 8 h.p. Royal Enfield, 1921 model; could I fit decompressors?—J.H.A.

Decompressors can be fitted in the valve caps of your machine, but they should not be necessary, as, if the engine is in good order, it is particularly easy to start. Most of the accessory houses supply decompressors that would suit, but it would be necessary to have your exhaust valve caps drilled and tapped with a sparking plug thread to receive them.

### MEASURING FOR WHEEL ALIGNMENT.

How does one line or measure a motor cycle frame to see if it is true, as I met with an accident, and since then I have to steer with the front wheel running towards the right, and this makes my arms ache pulling on the right all the time?—F.W.N.

The essential thing is that the two wheels shall be in the same track. This may be measured by stretching a cord tightly across both wheels, trying it first on one side and then on the other. It should be touching, or equally distant from the four points of the rims which it passes, on both sides.

### LICENCE TO BE ENDORSED.

Having been summoned for driving a sidecar to the danger of the public, I did not attend the Court and was not represented. I have received a notice from the Clerk stating I have been fined 50s., and asking for my licence to be forwarded for endorsement. I am remitting the fine, but have not sent my licence for endorsement, as I should like to know whether I can ask for reconsideration of the order to endorse, or appeal against it. If so, what procedure shall I have to adopt, as I cannot afford legal aid?—C.H.K.

If you wished to make any appeal against the endorsement of your licence you should have been either present or represented at the Court when the case was heard; but you cannot do anything now. We should advise you to forward the licence, as it will probably save further trouble. Provided there is no further endorsement during the next three years, you will then be able to apply for a "clean" licence at the end of that period.

### TYRE SIZE FOR 4½ h.p. B.S.A.

Please enlighten me in reference to the rear wheel tyre of my chain-cum-belt B.S.A. and sidecar. I have just fitted a new one; on examination I find it wearing very badly just where the beading comes in contact with the rim, and cutting the canvas through; it is a 26×2½in., and the wheel measures 21¼ diameter and the rim is 2in. wide. I may say the wheel is not quite true, and I find the joint of rim opening slightly.—H.J.

You do not give the date of your machine, but all the later ones at any rate are fitted with B.S.D.2 rims and sent out from the works with tyres 26×2½ for 2¼ rims. If by chance you have got a 26×2½ (old size) cover, this is not suitable for this rim, but if the latter is beginning to open at the joint, it would be advisable to have the wheel rebuilt with a new one.

### VARIOUS ADJUSTMENTS.

Will you kindly inform me on the following: (1.) 3½ h.p. Rover, 1920 countershaft solo model: at slow speeds, below 10 m.p.h., the machine jerks badly; what is the remedy? It is all right on any higher speed. (2.) In place of the twenty-one teeth on engine sprocket, I have had a twenty-five tooth sprocket fixed; what is the gear now? (3.) Do you recommend a spark intensifier attachment to the plug? (4.) On my front wheel the cone that is movable tightened up on my last ride, and I was thrown over the handlebars. As this is a very serious matter, especially should I be going fast or down a hill, I should like to know the cause. I have had the wheel off, and adjusted it. It was quite tight, and the wheel would only just move round. The balls are all right. There seems to be no contrivance for keeping the thing from screwing up. (5.) The head seems to answer far too easily to the helm.—R.C.R.

(1.) The trouble is probably due to the gear ratio being slightly too high for top gear running at very low speeds. You should change down to middle gear when you wish to run very slowly. (2.) You will find instructions for calculating gear ratios in the latest edition of "Motor Cycles and How to Manage Them." We cannot answer your question without knowing the numbers of teeth (or diameters of the pulleys) of all the elements of the transmission. (3.) "Spark intensifiers" will not necessarily improve the running, but they are of some advantage in guarding against sooting of the plugs on oily engines. (4.) If the front wheel cones were properly fitted it should be impossible to tighten up while the machine is running; it is just possible that you have removed the wheel and fitted it in the forks with the adjusting cone on the wrong side. The off side cone should be screwed up to the end of its thread or to a shoulder on the spindle. The adjusting cone should be on the near side of the machine. (5.) If the head is loose, it is quite easy to adjust. We would recommend that you obtain the makers' instruction booklet.

## READERS' REPLIES.

### FOR A LEGLESS RIDER.

I think "Legless" would find that a 1921 Bleriot-Whippet with the variable geared belt drive would suit his requirements, as this does away with the necessity for declutching when changing gear. The only alteration required to make the car completely hand-controlled is to fit a hand lever connecting up with the foot brake. The makers do this for about £4. Though not a legless driver myself, I am somewhat similarly placed, as I am paralysed from the waist downwards, the result of a shrapnel bullet in the spine, and, of course, cannot use my feet.—SPINE CASE.

With reference to your reply to "Legless" I am rather doubtful whether the Scott Sociable would be the most suitable machine to convert to hand control. I have never driven one of these machines, but it appears to me that gear-changing would present some difficulties, as one usually requires to manipulate clutch, throttle, and gear lever more or less simultaneously besides steering. Might I suggest that a 1914 or 1915 G.W.K. would be very suitable for the purpose, or, if the controls are of the same type, one of the current "engine behind" models. The car in question had a combined clutch and brake, by pedal, which was, I believe, particularly light to operate, and a foot throttle control. The latter could be worked by a lever on the steering wheel with the left hand, leaving the right free for the gear lever and hand brake. I suggest that, for working the clutch, a lever could be arranged working transversely and in such a position that it could be operated by the right elbow, being pushed outwards to release clutch, a further movement, of course, applying the brake. The top of the lever could be fitted with a flat plate about 8in. long, which would allow the elbow to slide backwards and forwards when changing gear, which is accomplished on this car by a straight backward and forward movement of the gear lever, there being no gate. The fact that the friction drive is foolproof and does not require delicate handling when changing gear would, I think, make such a control quite satisfactory. — The Scott Sociable certainly scores as regards starting, as an electric starter would, I suppose, have to be fitted to the G.W.K., but, on the other hand, the latter has a reverse, the lack of which might occasionally be felt on the Scott. In conclusion, might I, as another "disabled" driver, ask whether any of your readers have ever fitted an electric starter to a Morgan runabout, and whether there is any particular difficulty or disadvantage in doing so.—R.F.G. (Weymouth).

I think an outfit like mine would be the very thing for "Legless." It is a 2¾ h.p. three-speed Douglas, adapted to be driven entirely by hand from the light sidecar. It has one long handle-bar on which are the gas, air, and exhaust levers. The saddle has been removed, and the gear controls and brakes are arranged in its place. There is a lever to work the kick-start, and the second rider sits on the carrier. Are Derbyshire hills worse than these we have in the Lake District, I wonder? My Douglas regularly takes Dunmail Raise with two riding.—MARION W. LEE.

### IT WOULD BE NICE!

With reference to "Beginner's" query regarding the conversion of a four-stroke into a two-stroke when extra power is needed, I only know of one solution to this problem, namely, that he visits Slough and purchases a few spares (cylinder, piston, crankshaft, and crank case) all of two-stroke pattern. With these in his tool roll, he will be able to challenge any two, four, six, or eight-stroke on the market!—CONVERT.

The A.A. Scout equipped with his motor cycle and yellow side carrier is a familiar sight on British roads, and now the Association has extended its much appreciated service to France. The photograph depicts a scout on duty on the boulevards of Nice.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"G.J.C." (Burgess Hill).—Low generator; Terry spring saddle; Terry spring links, Wex carburetter; W.S.R. jet adapter; "Zoom-zoom" exhaust pipe; all for 2¾ h.p. Douglas.

"C.E.H." (Ware, Herts).—8 h.p. Blackburne with sidecar under heavy loads.

"G.A.W." (Northampton).—2½ h.p. Sun-Vitesse with rotary valve; solo or with light sidecar.

"E.C.B." (Rugby).—Overlap cam on 3½ h.p. Rudge Multi; speed, noise, general running.

"C.F.B." (Leith).—Fallolite lamps; reliability and life of pastille.

"Jeweller" (Harrow).—Sidecar outfit (box carrier); suitable for collecting and delivering clock repairs; absence of vibration first consideration.

"W.R." (Maldon).—Best mechanical lubricator.

"T. O'G." (Swinton).—2¾ h.p. A.J.S. 1922 touring model: speed; consumption.

"V.G.H." (Plymouth).—4½ h.p. Quadrant; solo.

"O.W.G." (Watford).—8 h.p. Royal Ruby outfit: speed, consumption, and lateral rigidity of springing system under heavy and continuous work.

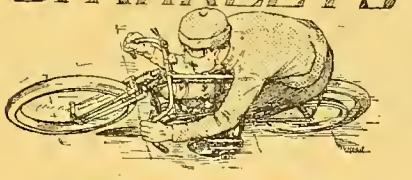
"W.C." (Edinburgh).—Binks or Atmos carburetter on 7-9 h.p. Harley-Davidson: advantage of Flexekas on valve stems.

"H.B." (Denton).—Methods of improving consumption of 2¼ h.p. New Hudson. B. and B. carburetter fitted with 26 jet (70 m.p.g.).

E.P. (Aspatria).—Watsonian Featherweight or similar sidecar on 2¾ h.p. 3-speed New Imperial; consumption and climbing in moderately hilly district.

"F.G.T." (Lewes).—7 h.p. F.N. and 8 h.p. Henderson for heavy sidecar work.

# SPARKLETS



### Spare Parts Price Reduction.

A reduction of 15% in the catalogue price of replacement parts is announced by Rudge-Whitworth, Ltd., Coventry.

### At the Scottish Show.

It is claimed that 53 per cent. of the tyres and 72 per cent. of the belts fitted to the machines staged in Kelvin Hall were of Dunlop manufacture.

### Another London-Exeter Echo.

A gold medal has now been awarded to P. Cunningham, the P. & M. rider, in place of the silver, with which he was credited in the M.C.C. Exeter run.

### A French Motor Cycle Journal.

Our French contemporary, *Motocyclisme*, is now published from its new address at 18 Rue Saint-Marc, Paris; starting with February the journal will appear on the 10th and 25th of each month.

### A Floating Exhibition.

It is proposed to send a Diesel oil engine driven 20,000-ton ship round the world fitted up as an exhibition of British trade. One of the suggested stands illustrated is shown fitted up for the exhibition with a sidecar outfit on the floor and a showcase at the rear for accessories. The ship is due to sail from London on August 15th, 1923, and will finish on February 7th, 1925. Particulars of available space can be obtained from the British Trade Ship, Ltd., 12, Grosvenor Gardens, London, S.W.1.

### For Competitions Committees

New motor cycle clubs, the committees of which are at a loss where to obtain suitable medals and awards for the year's competitions, would no doubt find their requirements met by W. O. Lewis (Badges), Ltd., of Howard Street, Birmingham.

### Triumph Service Depots.

Service agents who will carry comprehensive stocks of Triumph replacements are being appointed in all parts of the country; in addition there are already over 1,000 appointed agents in the British Isles, most of whom can supply spares for current models from stock.

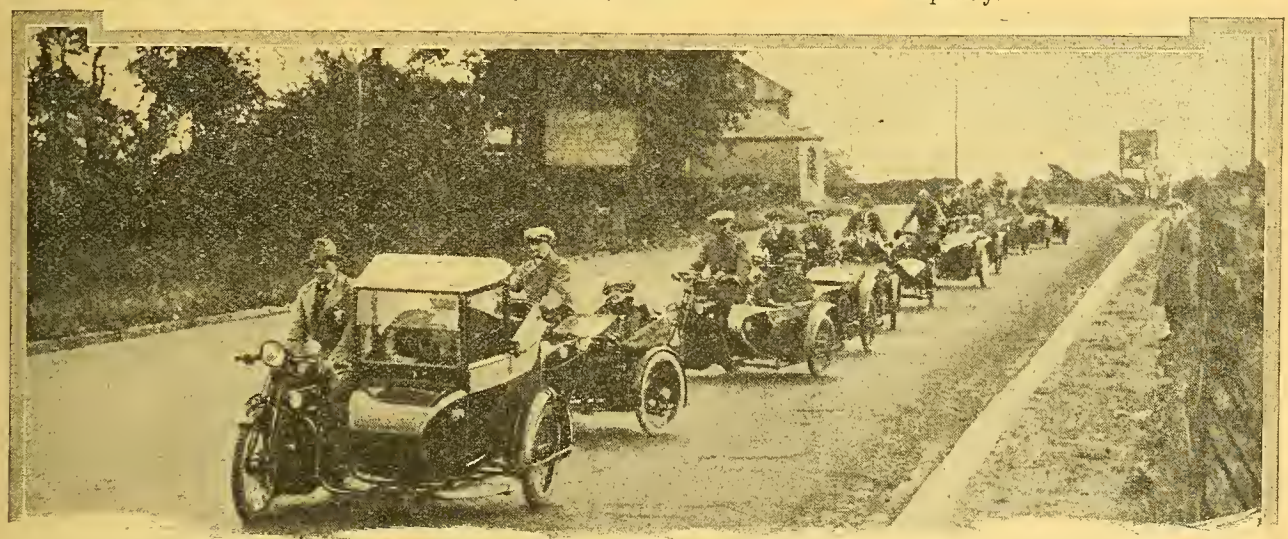
### Catalogues Received.

Holroyd Motors, 6, Warwick Street, Regent Street, London, W.1: A leaflet concerning the Holroyd sporting model, which was described in *The Motor Cycle* of December 8th, 1921.

Brookes and Harris, Bishop Street, Wolverhampton: A folder describing the compact folding coupé sidecar made by this concern. The body is one offering more protection from the weather than most, and the complete sidecar, on Millford chassis, is listed in two models at £51 and £58 respectively.

S. A. Newman, Ltd., 49, Lichfield Road, Birmingham: The first part of the new Ivy catalogue is devoted to a general description and chief features of the 2½ h.p. and 3 h.p. two-strokes and useful details, such as gear ratios for both solo and sidecar models, chain sizes, and just those particulars which the user wants.

Triumph Cycle Co., Ltd., Coventry: A well-written descriptive catalogue of thirty-two pages, with five illustrations printed on art paper. All the Triumph models are described, and many of the essential parts are shown in detail. All the preliminary details a prospective purchaser requires to know are dealt with adequately.



TO FOSTER THE SOCIAL SPIRIT. Staff trials and works reliability trials were a feature of last year. Development of the social side is all to the good in the motor cycle world, for when the productive staffs of factories are all keen riders the quality of the machines they make is bound to improve. Above is shown a group of Bradbury workers—may many such social runs take place in 1922.

# CLUB NEWS

### Uxbridge and District L.C. and M.C.C.

The first annual dinner was held at the Chequers Hotel, Uxbridge, Col. the Hon S. Peel, D.S.O., M.P., the president of the club, presiding over a fairly representative gathering. The club, which only started in the middle of last season, has now a membership approaching forty

### Bulwell M.C

Considerable progress has been made by this comparatively new club, and the membership is increasing very satisfactorily. Both sides of the movement, social and sporting, are receiving attention; sub-committees have been formed and are now at work, and the club has joined the East Midland Centre A.C.U. The honorary secretary is Mr. Chas. Marriot, 110, Commercial Road, Bulwell, Nottingham.

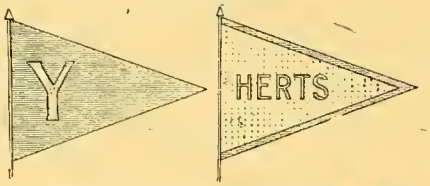
### Dublin and District M.C.C.

The sixteenth annual dinner was held on the 28th ult. at the Dolphin Hotel, under the chairmanship of Mr. S. L. Hutchinson, the president of the club. The company numbered over one hundred and twenty, and the proceedings throughout the evening were characterised by a good deal of merriment. The chairman said it gave him particular pleasure to have the honour of being the first chairman of a motor cycle club dinner to propose the sentiment of the "Irish Free State," and he expressed the hope that in the more settled state of affairs that the future promised for Ireland the sport would continue to flourish, and that it would be less difficult to carry out their competitions than it had been during the past two years. During the evening the toasts of "The Club," "The President," "The Visitors," "The Press," and "The Hon. Secretary" were honoured. Submitting the latter, the chairman mentioned that Mr. W H. Freeman had presented to the club a fifty guinea cup as a perpetual trophy for the winning team in the club's twenty-four hours' trial, which had been officially recognised by the British Motor Cycle Manufacturers' Union. Replicas of the cup would be given to the individual members of the team.

### Ilkley M.C. and L.C.C.

Headquarters of the club have been transferred from the Crescent Hotel to the Lister Arms Hotel, Ilkley.

CLUB COLOURS



We have several times recently published illustrations of the colours adopted by motor cycle clubs, and have encouraged a more general extension of the scheme. Here are two more: the blue and gold pennants of the Yeovil and District M.C.C and the Herts M.C. and L.C.C. The enamelled badge of the City and Guilds M.C.C. is shown at the side

### West Kent M.C.

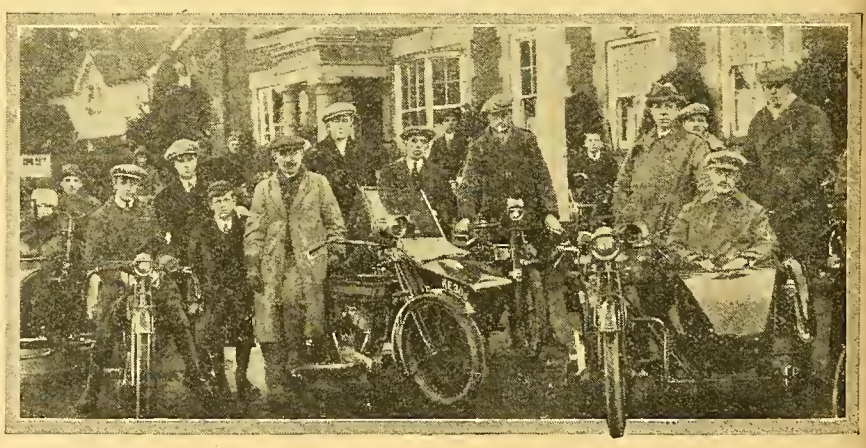
Fifteen machines took part in the speed judging twenty-mile trial starting and finishing at Chislehurst Common. A ten-mile circuit was well marked with arrows. Before the start, speedometer glasses were covered and watches handed over. The winner was T. Spratt (8 Matchless sc.), 5s. outside schedule. J. Wilson (4 Harley) was awarded consolation prize.

### South Birmingham M.C.C.

The annual general meeting was held on Tuesday of last week, at the Mermaid Hotel, Birmingham. The following officers were elected: President, Mr. Alec Ross; hon. secretary, Mr. E. Boydell; treasurer, Mr. J. Luckett; captain, Mr. Bert Kershaw; vice-captain, Mr. H. Uzzell. The balance sheet showed a very successful year and was passed without discussion. All communications should be addressed to Mr. E. Boydell, 93, John Bright Street, Birmingham. The first trial will be held on February 18th, the premier award being a cup to be won outright.

### Atherton and District M.C.C.

Members and friends of the newly formed club had their first run on Sunday, the 29th ult., under the captaincy of Mr. J. Mansley. It had been intended to have a run of thirty miles over Rivington and Bolton moors, but unexpected difficulties in the form of deep snow prevented the carrying out of the programme. Clean ascents were made of Rivington Pike, but along the top road to Belmont snowdrifts of two or three feet in thickness were encountered. The solo riders managed to find channels where the depth of snow was only 6in., but a sidecar machine had to be carried about 200 yards. The next run takes place on February 12th, when Blackpool will be visited under the captaincy of Mr. A. Bleakley.



A WINTER TRIAL. Start at Chislehurst Common of the West Kent M.C. Speed Judging trial, on the 27th of January. A 10 mile hilly circuit was covered twice.

**Club News.—**

### Proposed Brixton M.C.C. Club.

Mr. C. Willcox, of the Light Car and Motor Cycle Eng. Co., 22-26a, Tulse Hill, Brixton, has been approached by several local motor cyclists suggesting that he should form a club as above. He would like to hear the views of other local readers.

### Wallington and District M.C. and L.C.C.

Mr. Wilfrid Hiscox accepted the presidency of the club, the officers were re-elected, and a strong committee formed at the second annual general meeting, held on January 23rd at the Greyhound Hotel, Croydon. Messrs. A. Gruzelier and R. A. Green jointly presented a challenge cup, and the programme for the ensuing year was discussed.

### Keighley M.C.

Quite a large number were present at the second annual dinner held recently at the Victoria Hotel. Responding to the toast of "The Club," Mr. G. A. Shore said they could claim to have a big percentage of sporting riders. Last year two of the members took part in the Senior T.T., and he ventured to say that it was only mechanical trouble which prevented them from bringing the trophy home to Keighley. In addition, some of their members won gold medals in the Scottish and English Six Days Trials, so, he thought, the club could claim to be making some progress.

### Colchester and District M.C.

Sir L. Worthington Evans, Bart., M.P., the War Minister, was re-elected president at the annual general meeting, held at headquarters, the Red Lion Hotel, Colchester, on Friday, January 27th. The club has received from this gentleman a valuable silver challenge cup. The secretary's report showed that the club was in a sound financial position. All interested should address their inquiries to the secretary, Mr. T. S. Wilkin, 10, Osborne Street, Colchester.

### Avalon and Wells M.C.C.

A most successful annual meeting and dinner was held at the Swan Hotel, Wells, on Wednesday of last week, followed by presentation of two cups and prizes valuing £20 by Mr. A. J. Clare. An excellent musical programme ensued. Mr. W. H. Millard, 32, Bore Town, Glastonbury, is the honorary secretary.

### Redhill, Reigate and District M.C.C.

The first annual dinner took place on Wednesday, February 1st, at the Warwick Hotel, Redhill. It was regretted that the president, Mr. C. S. Case-Green, was unable to be present. Mr. B. L. Jephson presided. In addition to the Challenge Cup given by the President, some 30 medals, gold and silver, were presented. An excellent entertainment completed a most enjoyable evening.

The annual general meeting will be held on Thursday next at 8 o'clock at the Warwick Hotel, Redhill. New members will receive a hearty welcome. The hon. secretary is Mr. E. P. Duplock, 15, High Street, Redhill.

### Public Schools M.C.C.

The opening run will be held on March 12th, and the rendezvous will be, as usual, the Bear Hotel, Esher, at 11 a.m. The subscription is one guinea except for members who are still at school, who pay 10s. 6d. only. A fee of 10s. 6d. paid in addition to the subscription will cover entries for all competitions during the 1922 season. This does not prevent a member who anticipates entering for only one or two events paying these entry fees only; but it is pointed out that the entry fee for a Brooklands race is 7s. 6d., so that for an additional 3s. the member is free to enter all other 1922 competitions.

### Shirebrook M.C.

The club recently held its first annual meeting since severing its connection with the North Derbyshire Club. There was a good attendance, but the business was confined to the election of officers and arrangements for affiliation with the A.C.U.

### York and District M.C.

On Wednesday of last week, the club held its annual general meeting at the club headquarters, the Windmill Hotel. A satisfactory season was reported. Mr. G. A. Walker was elected captain for the ensuing year, and Mr. F. T. Cleveland hon. secretary; his address is "The Kiosk," Lendal, York.

### Ulster M.C.C.

On Monday of last week the club held its first annual general meeting, with Mr. T. Moles, M.P., in the chair. The report of the committee showed that the club had carried out a very big programme of competitive events during the past season, despite the difficulties of the times. The club had a membership of 150, and can claim to be the largest motor cycle organisation in Ireland. In moving the adoption of the report, Mr. Moles referred to the possibility of an international motor car race being held in Ireland next year, and suggested the Ulster club might consider whether it could on its own, or in co-operation with others, promote about the same period an international motor cycle contest on the lines of the Tourist Trophy Race.

### Acton M.C.C.

On March 11th the club will open its competition season with a sporting trial for solo machines. The trial will consist of sixty-mile circuits, each non-stop. All non-stop finishers within the time limits of 10m. late or early will receive gold medals. All entries have to be in by March 1st. Full particulars and entry forms can be obtained from the secretary, 46, Churchfield Road, Acton, London, W.3.

### North West London M.C.

Chiefly known for the fact that it gives every encouragement to the private owner, the club held its seventeenth annual dinner at the Holborn Restaurant on the evening of the 2nd inst., with Mr. J. W. Thomas in the chair. The duty of proposing "The Club" fell upon Prof. A. M. Low, who made an excellent speech, mentioning that the club was the only one in England composed solely of amateurs. It had had a clean record and a clean run for seventeen years. He coupled with its name the names of Mr. H. J. Pooley, the honorary secretary, and Mr. Frank Thomas, son of the chairman.

Mr. Pooley, in reply, mentioned that the members were out for sport only, and did not decry the ordinary trade club, as the British trade was the most sporting in the world. Their club had started with fifteen after the war, having lost fifty members. He was glad to say these fifteen had carried on the old traditions.

Then followed the distribution of prizes by Mrs. J. W. Thomas. The toast of the ladies was proposed by Dr. C. H. Auty and ably replied to by Mrs. Goddard.

In the course of the evening Mr. H. J. Pooley was presented with a cheque as a recognition of his services, and was instructed by the chairman that it was the wish of the club that he should purchase anything he desired with it. That most excellent sportsman stated that nothing would give him greater pleasure than to devote the money to the purchase of a challenge cup for a car event.

# A FRENCH ONE-DAY TRIAL.

THERE will be a repetition of last year's motor cycle and cycle car non-stop reliability trials in the Forest of Marly, near Paris, on February 19th. The trials, which are organised by the national body, the *Union Motocycliste de France*, are based on English non-stop runs, with penalties of 5 marks for each time the machine is stopped to take up supplies, 5 marks for a stoppage of the engine to change tyres, 15 marks for a stop to carry out repairs or make adjustments, and 10 marks for a stoppage for any other cause. A closely guarded and rather difficult circuit of about five miles will be used, the average speed varying from 18.6 m.p.h. for 250 c.c. machines to 24½ m.p.h. for machines of 500 c.c. and upwards. Scooters and motor-assisted bicycles are admitted, the average speed required of them being 12½ m.p.h.

The distance varies with the class of machine, the maximum being 155 miles. Last year's event attracted considerable interest, but a freak hill having been included in the course, and rain having made the surface of this greasy, there were many complaints that the event was unnecessarily severe. In view of this it has been decided to improve the hill by giving sufficient width for a motor cycle and a cycle car to run side by side. If the weather conditions should be very bad, this hill will not be included. For the scooters and motor-assisted bicycles a shorter and easier course will be adopted.

# THE FRENCH GRAND PRIX.

## France's big Motor Cycle Event this Year to form part of Great Alsatian Fete.

AS every race in France is glorified with the title Grand Prix, it is often a difficult matter for British motorists to distinguish between the really great international event of the year and the scores of competitions of nothing more than local interest.

This year the leading motor cycle race in France will be a long distance speed contest to be held at Strasbourg, probably on July 12th. The race is organised by the national body, the *Union Motocycliste de France*, and doubtless will be open to machines of 250, 350, and 500 c.c. Strasbourg has been selected as the scene of the great French Car Grand Prix on July 15th, in which French, British, and Italian cars are entered. This speed contest for machines of

(Centre).
Strasbourg Cathedral is one of the architectural beauties of the old Alsatian capital.

(Bottom).
A picturesque corner of France's regained city, which will be the centre of much motor activity next summer.

**The French Grand Prix.—**

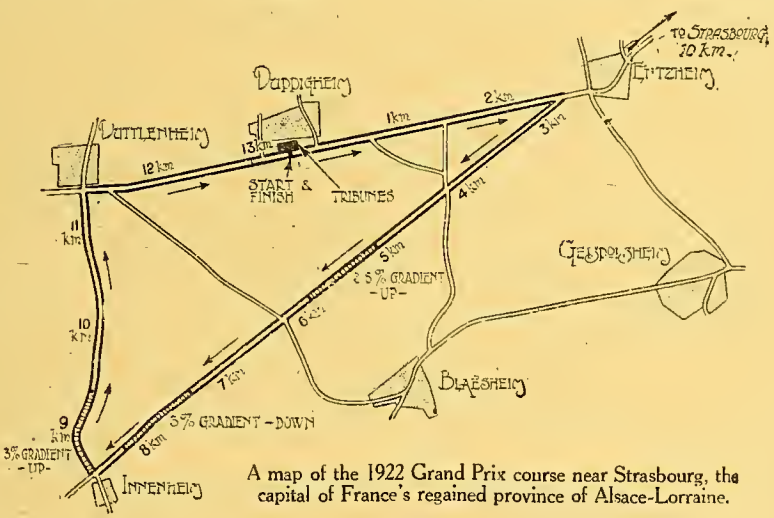
2,000 c.c. will be followed on the 16th by a Touring Car Grand Prix, the contestants in which will be granted a limited amount of fuel.

The Motor Cycle Grand Prix, to be run on the 12th, will have all the advantages of the preparations made for the great car race. A triangular course a little more than eight miles round has been laid out, and will be provided with grand stands, substantial supply pits, barricades at all dangerous corners, and on the day of the race will be guarded by regular troops. Some idea of the importance of the preparations can be gathered from the fact that 150,000 francs (£3,000 at present exchange) will be spent on improving these eight miles of road, and that in addition the City of Strasbourg has voted a subsidy of 300,000 francs (£6,000) towards general expenses.

### Hard Granite Surface.

The Strasbourg circuit is about as level as the Grand Prix course at Le Mans, on which a Sunbeam machine was victorious last year. It has the great advantage, however, of being made of hard granite, which will not be affected at all by the passage of the two-wheelers, and is expected to stand up under the strain of the 100 mile an hour racing cars.

The motor cycle and car races in Alsace will form part of a general programme of festivities to begin on July 9th and to finish on the 17th of the same month. These activities will comprise exhibitions of Alsatian costumes, the opening of the new race-course with important horse races, a competition for the decoration of houses and balconies, military reviews on the French national holiday, the *Quatorze Juillet*, boxing matches, boat races, and finally the arrival of the cyclists in the Tour de France 3,000 mile bicycle race. This big programme cannot fail to add to the general interest of the Motor Cycle Grand Prix and to attract big crowds from all parts of the country.



A map of the 1922 Grand Prix course near Strasbourg, the capital of France's regained province of Alsace-Lorraine.

### Tourist Attractions.

This part of Alsace being particularly attractive to the tourist, it is quite certain that not a few British motoring parties will take advantage of the race to explore the region. Excellent hotel accommodation can be obtained in Strasbourg, while in addition there are at least a score of surrounding towns and villages, comprising such historic centres as Saverne, Molsheim, and Colmar, where travellers are sure of finding all that they desire.

Another important French race will be organised by the *Motocycle Club de France*, one of the most active organisations in Paris. There will be two distinct races—the one on June 4th being for motor cycles, and that on the following day being reserved to cycle cars. A course has been selected close to the town of Montargis, about 65 miles due south of Paris. The distance round is eight miles, this comprising four turns, of which three will be banked. The town of Montargis has shown its interest by granting a subvention of 30,000 francs, while the local authorities have promised to remake the roads entirely.

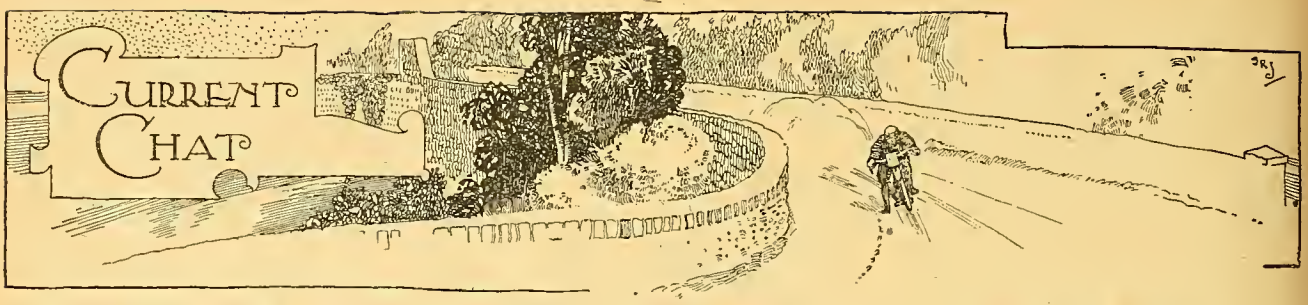
# INTERESTING DESIGNS.

THE conservatism of the British people is well illustrated when those who have followed the evolution of the motor cycle recall the many interesting designs which have been produced and which, for some reason or another, are not now offered to the public.

Most of these promising machines were of the unconventional type, and this fact may have been the cause of their abandonment. For example, the Stella twin-cylinder two-stroke was a most advanced design, embodying a water-cooled engine with cylinders side by side and in line with the frame. The gear box was combined within the crank case, and altogether the machine was a most workmanlike job, not unlike the French-made Lutece illustrated elsewhere in this issue.

Then there were the two-cylinder two-stroke machines produced by the Levis, Allon and Connaught firms. The first mentioned name appeared on the tank of motor cycles having both flat and side-by-side twins; the Connaught was a neat flat twin with a very ingenious method of transferring the charge, while the Allon resembled the Levis side-by-side engine, both being placed with their crankshafts across the frame.

Another design which many regret has disappeared from the market is the T.M.C., a four-cylinder shaft-driven machine with a spring frame; still another was the Barry, with rotary two-stroke engine. If we extend the list to American machines, we may add the Indian two-stroke lightweight and the tiny flat twin, both of which were sold in the U.S.A. during the war period, when importations were prohibited in this country.



## Times to Light Lamps.

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### An Encouraging Sign.

Every week motor cycle factories are increasing their staffs—a sign of improved trade.

### Clearance Tyres.

The economical motor cyclist wanting a new pair of tyres, in readiness for the harder riding which he expects to do when finer weather returns, might do worse than try some of the clearance lines which are being offered; they usually represent really good value.

### Garages for London Motorists.

To meet the requirements of motorists who are regularly using their cars and motor cycles in the Metropolis, the A.A. has now completed the inspection and appointment of upwards of fifty garages within a five-mile radius of Charing Cross. Members will be supplied with a full list of these recommended garages upon application.

### A "Second Olympia."

In addition to the new hall to be erected at Olympia, referred to elsewhere in this issue, a project is afoot to acquire the site of Crosse and Blackwell's jam factory in the Charing Cross Road upon which it is proposed to build a "second Olympia." When completed, the Kensington hall will be sufficient for the motor cycle exhibition next November however.

### Inter-'Varsity Hill Climb.

This year the rival Oxford and Cambridge clubs, in the inter-'varsity hill-climb to be held on Aston Clinton on March 4th, will be represented by teams of three riders in each class—350 c.c., 500 c.c., 750 c.c., and unlimited solo; 600 c.c. and unlimited sidecar; and light cars and cycle cars. Both the clubs concerned are, we hear, taking the matter very seriously.

### Entries for Continental Competitions.

Prospective British entrants for the Paris-Nice Trial, or any other foreign event, should note that their entries must pass through the Auto Cycle Union, the penalty for non-observance of this rule being disqualification. An F.I.C.M. rule states "that every entry for an International Competition shall be made to the promoting body through the governing body of the country which has registered such entrant."

### A.C.U. General Committee Meeting.

The next general committee meeting of the A.C.U. will be held at the R.A.C. at 2.30 p.m. to-morrow, Friday.

### An o.h.v.—at Brooklands?

It is not unlikely, we learn, that a new o.h.v. edition of a famous machine hitherto marketed solely as a side-valve model may shortly be seen at Brooklands.

### "The Motor Cycle" Index.

Indexes and binding cases for the volume of *The Motor Cycle* ending December, 1921, are now obtainable on application to Messrs. Iliffe and Sons, Ltd., Dorset House, Tudor Street, London, E.C.4. The price of the indexes is 4d., post free, and that of the binding cases, 3s. 10d. post free.

### idecar Fuel Consumption Records.

Arising from the controversy in our "Correspondence" columns under the above heading, the private fuel consumption test being organised by Mr. H. S. B. Booth, 235, Harrow Road, Paddington, London, W.9, has now been opened to all makes of sidecar and a limited number of solo machines. Intending competitors are asked to send stamped envelopes to Mr. Booth for particulars.

## Special Features.

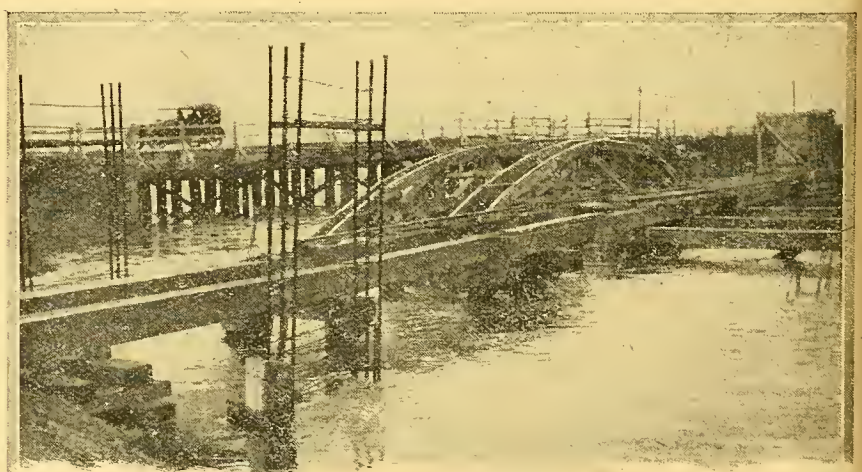
FRENCH SIDE-BY-SIDE TWINS.
T.T. REGULATIONS.
BUYING A SECOND-HAND MACHINE.

### Variations in Sunset.

In February sunset is 13 minutes earlier in Aberdeen than at Greenwich, and in July 44 minutes later. This month the evenings are drawing out at the rate of about 6 minutes every three days.

### Coachbuilders' Journal on Sidecars.

The building of sidecar bodies is becoming an important industry, and the advantages accruing from the Olympia exhibitions is seen in the eager competition by a vast array of ingenious minds, and every degree of talent and skill, in providing the most perfect combination that will ensure both comfort and protection to the passengers with the positive requirements of lightness in weight and beauty of general appearance. . . . . Individual requirements are as widely varied in the sidecar body as in any other type. It is not, therefore, too much to say that great and rapid as have been the improvements in the past, we venture to think they are but a prelude of much further advancement and future success in the application of the art of the coachbuilder to the motor cycle body.—*Cooper's Vehicle Journal*



REPLACING A DANGEROUS BRIDGE.—The old wooden structure in the background spans the Trent near Newark, and will be remembered by London-Edinburgh competitors. To motor cyclists the bridge was dangerous because of its sharp angle in relation to the highway on both banks, and to heavier vehicles because of its instability. The new bridge is to be in a straight line with the roadway.

# REGULATIONS FOR THE T.T.

## Minor Alterations Only. Trophy Replicas instead of Gold Medals. Entrance Fee Changes.

THERE are no very startling innovations in the regulations governing this year's Tourist Trophy Races, except as regards the official recognition of the (250 c.c.) Lightweight Race, already announced in *The Motor Cycle*.

Entries close at ordinary fees at noon on Saturday, April 1st, and at double fees at noon, Saturday, April 15th. The number of entries will be limited in the following manner: Entries are to be classified into two groups—(1) entries from manufacturers; (2) other entrants.

Group 1 will be arranged according to the number of entries per make; the manufacturer having the greatest number will have his entries reduced until they equal the next largest. The process will be continued until the required reduction has been attained, or until no manufacturer has more than three entries.

Of course, this procedure will only be carried out if the maximum is exceeded, but if, in spite of this reduction, the limit is still exceeded, Group 2 will be similarly treated until no entrant has more than one entry. If a still further reduction is called for, Group 2 will be further reduced by arranging the entrants according to the makes of machine, and cutting out the latest representatives of the most frequently entered makes.

The entry fee is now twenty-one guineas, which includes number plates and other items previously charged as extras.

### Awards.

In addition to the Senior Tourist Trophy, of which the others are exact replicas, there will be also the Junior and Lightweight Tourist Trophies; the driver of the winning motor cycle will receive a cash prize and a replica of the Trophy; the drivers of the second and third of each race will also receive cash prizes; and a replica of the Trophy will be awarded to the entrant of every motor cycle completing the course within thirty minutes of the winner's time.

### Team Prizes.

There will be the usual team prizes for teams of motor cycles of the same make in each race, whose drivers must finish within thirty minutes of the winners' times. Lastly, there is the Nesbit Award, granted by the stewards of the meeting to such competitor or competitors who, in their opinion, shall have exhibited outstanding pluck and endurance, or capacity to triumph over difficulties so noteworthy as to deserve special recognition.

It is now definitely settled that the Junior and Lightweight Races will be held on Tuesday, May 30th, and the Senior Race on Thursday, June 1st.

As the races are international competitions, they will be run under the competition rules of the *Fédération International des Clubs Motocyclistes* as well as under the open competition rules of the A.C.U. and under certain supplementary regulations.

Without going into the details of the regulations to be conformed to under the F.I.C.M. rules, we may recapitulate the following: Machines entered for the Senior race must be touring motor cycles with engines not exceeding 500 c.c., and must weigh not less than 187½lb. without fuel, oil, and tools; machines for the Junior Race must be fitted with engines not exceeding 350 c.c., and must weigh not less than 165½lb.; and for the Lightweight event 250 c.c. and 132¼lb. are the figures. For the lightweights, the minimum tyre diameter is 50 mm. (1.97in.), and here, as in the case of the other two classes, three security bolts must be used, one of which may be a bolt valve. (This last requirement may be waived in the case of those competitors who apply for exemption and who show good cause.)

### Silencers.

Silencers are not compulsory in the races, but must be fitted for practising. When the silencer is detached for the purposes of racing, the exhaust pipes must extend as far as the back axle.

Helmets of an approved type are compulsory, and metal-studded boots are forbidden during practice and during the races. The Union may require any driver to undergo a medical examination, and may disqualify a driver adversely reported on.

### Practising.

As in previous years, a driver will not be allowed to start unless he has ridden a motor cycle for at least five laps of the course in practice, one of which must be covered in one hour (Senior), in one hour and ten minutes (Junior), or one hour and thirty minutes (Lightweight). Drivers, however, who started in the 1920 or 1921 T.T. Races need only do three practice laps.

Machines and their riders will be weighed and the weight published, while machines which finish to time will be examined after the race.

# LAND'S END TO JOHN O' GROAT'S

## To Celebrate the Motor Cycling Club's Coming of Age—an End-to-End Run this Summer.

A LAND'S END to John o' Groat's trial, to celebrate the twenty-first birthday of the M.C.C., will be a feature of this year's events.

The Motor Cycling Club is the oldest motor cycle club in the world and boasts of about one thousand members, and this interesting decision was come to at the annual general meeting held at Pagani's Restaurant on January 31st. The agenda was of the simplest description, and the business consisted merely of the secretary reatling the notice convening the meeting, and the adoption of the report and of the statement of accounts, which were agreed to unanimously. It was while he was supposed to be criticising the accounts that Mr. Arthur Candler made the suggestion referred to above, which was received with enthusiasm. He considered that the competition should be confined to private owners and that the number of entries should be limited, owing to the difficulty of finding hotel accommodation on the route. He recalled some interesting facts concerning the Club's history. In 1904 the membership was only 151, and of these there were twelve who still belonged to the Club, while he himself was the only remaining member of the original committee.

As announced at the annual dinner, the president-elect was Mr. J. K. Starley, and on it being put to the meeting he was elected unanimously. The next procedure was to elect the Club officers for 1922. These are: Vice-presidents, Messrs. Albert Brown, E. B. Dickson, J. Van Hooydonk, J. A. Jackson, F. J. Jenkins, E. Perman, Harry Smith, R. C. Davis, and Lt.-Col. Charles Jarrott, O.B.E.; captain, Mr. W. H. Wells; hon. secretary, Mr. Southcomb May; hon. treasurer, Mr. L. A. Baddeley; and hon. auditor, Mr. W. Richards.

While the ballot papers for the election of the committee were being scrutinised, discussion was invited regarding the 1922 competitions. Mr. Harrison suggested the stiffening up of M.C.C. competitions and the re-institution of double-journey events. He thought that the smaller machines should be given a better chance. Mr. D. S. Parsons opposed the idea of double-journey events, and, referring to the smaller machines in the big trials, mentioned the case last year of a 2¾ h.p. sidecar outfit which was disqualified for being too early. Mr. Sawtell thought that car entries should be limited to vehicles with engines not exceeding 1,500 c.c., so that large cars might not obstruct the motor cycle competitors.

The Chairman replied to the effect that the M.C.C. events were more in the nature of club runs than competitions, and the Club did not intend to make them of the "knock-out" variety.

It was announced that Mr. W. H. Elce was again offering a cup for three-wheelers in the Land's End run, while Mr. L. A. Baddeley offered a cup for the Land's End to John o' Groat's competition, and a cup was also offered by Mr. H. Taylor for 350 c.c. machines for the same event.

The 1922 committee consists of the following members: Messrs. R. H. Head, A. Candler, H. G. Bell, E. M. P. Boileau, E. Bridgman, W. Cooper, B. A. Hill, J. A. Masters, J. Ogilvie, V. Olsson, G. Pettytt, and R. C. Empson.

# SIDECAR CHASSIS DESIGN.

## Extracts from an Informative Paper read before the Coventry Graduates of the I.A.E.

AT a meeting of the Coventry graduates of the Institution of Automobile Engineers, held at the Broadgate Café last week, Mr. R. R. Grindlay read an interesting and informative paper (illustrated by figures) on "Sidecar Design." Mr. E. Caudwell was in the chair, and there was a very good attendance. Extracts from Mr. Grindlay's paper follow :—

The first sidecar chassis was invented in 1902 and provisionally patented in 1903. Up to that period trailers and fore-

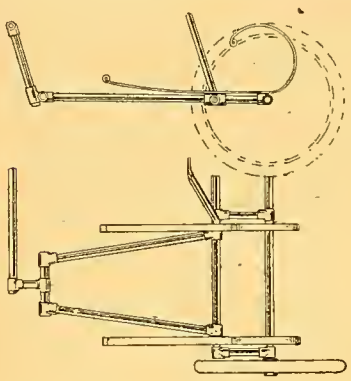


Fig. 1

carriages were being used as motor cycle attachments for the purpose of carrying an extra passenger, with very unsatisfactory results. The side method of attachment has affected the motor cycle industry to a degree second only to the advent

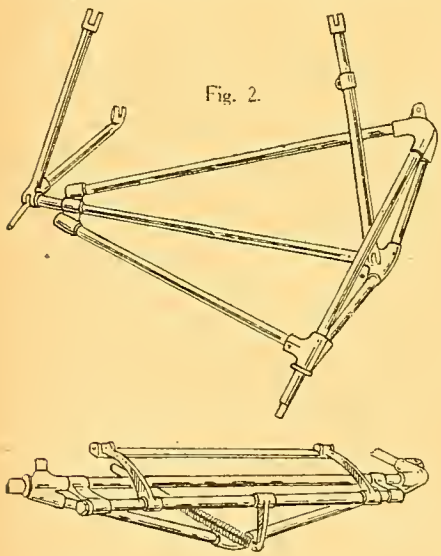

Fig. 2.

of the magneto and the pneumatic tyre. An illustration of the first sidecar chassis is given in fig. 1, and an inspection shows that there is very little difference discernible between this and the modern sidecar, at least in principle.

### Chassis Design.

There are, generally speaking, two types of chassis in use, one following a rectangular plan in construction, and the other a triangular plan. Steel tubing is in the majority of cases the material used in construction, chiefly by virtue of the simplicity and cheapness of a tubular frame, and also because it provides the easiest method of attaching the sidecar.

The rectangular plan is more generally used, and is in some ways preferable, as it permits of the easy attachment of a pair of front springs, one on either side of the body. Although one central front spring may be fitted with quite satisfactory service on a triangular chassis with a very light, small body, too much roll is experienced with the average body fitted, unless some form of anti-rolling device, such as a pair of hinged bell-cranks, suitably linked together, and

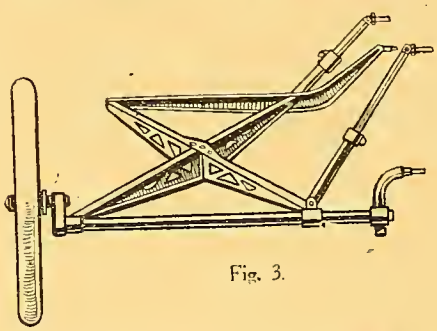

Fig. 3.

working in conjunction with coil springs, is used for springing the rear of the body.

To the best of the author's knowledge, only one triangular tubular chassis, the Scott design, fig. 2, has any advantage in rigidity over the usual rectangular form, since, with the one exception, none appears to be correctly triangulated to meet vertical shocks. It must be borne in mind that the centre of gravity of the sidecar must be kept as low as possible, in order to minimise the danger of the sidecar wheel lifting when negotiating a left-hand corner, and difficulty is experienced in designing a correctly triangulated chassis, as the height of the body would be increased too much.

### Rectangular Chassis and Distortion.

The objectional feature with regard to the usual rectangular chassis is the distortion occasionally found when a heavy load is carried at the front of the sidecar, resulting in the slight bending of the longitudinal members. The duplication of the longitudinal tubes is a method of minimising distortion, and many chassis having duplicated side members are found on the heavier and very powerful sidecar outfits.

A new design of chassis, made of girder section angle steel, has recently made its appearance (fig. 3). It will be seen that the chassis is composed of two main girder members arranged to cross one another after the manner of the diagonals of a quadrilateral, thus providing four arms. The arms are connected at the front by an I section member, which is deepest at the point of connection to the inner arm. The I section member then extends upwards and forms the main front connection to the motor cycle. The rear arms of the frame are joined by the underslung

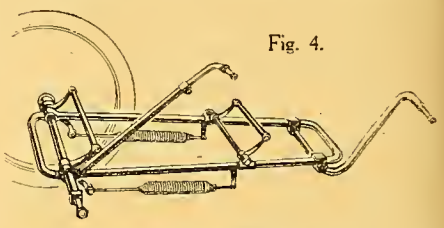

Fig. 4.

axle tube. This design certainly shows very favourable promise, as a rigidity much superior to the rectangular design is given, without the disadvantages of the triangulated tubular chassis.

Another very interesting chassis which has recently been evolved is shown in fig. 4. The frame is constructed of channel steel in one piece in the form of a truncated triangle with rounded corners. The chassis is void of any brazing, the ends of the channel steel being welded together. To this extremely simple frame are attached the axle tube, front connection tube, and the front spring crossbar, by means of suitable clips.

### The Simplest Chassis.

The very simplest design of chassis is illustrated in fig. 5. The principal component of the lay-out is the axle tube. This member is of exceptionally large diameter (2 inches), and may almost be

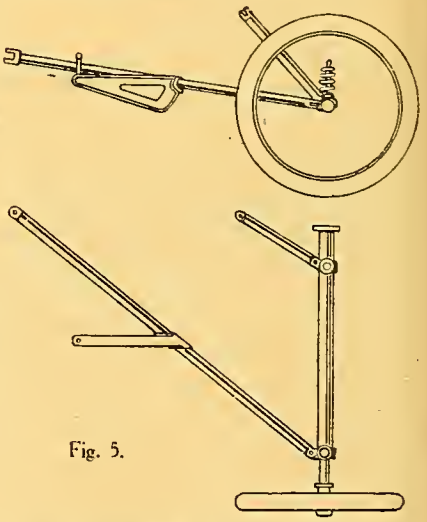

Fig. 5.

said to comprise the sidecar chassis itself, as it not only positions the sidecar wheel, but also supports, through the medium of helical coiled springs, the greater part of the load carried. The front of the body

**Sidecar Chassis Design.—**

is supported by a ball and socket joint attached to the underside of the sidecar, and to the connection tube running from the sidecar wheel to the down tube of the motor cycle by a girder pressing. No doubt this chassis, probably supreme in the elimination of non-essentials, would give satisfactory service attached to a very light machine.

To keep the centre of gravity as low as possible, a design in which the frame is underslung from the axle a matter of 4 or 5 inches is preferred. It is also a simple matter, in a dropped frame design, with the use of a simple bracket for the wheel axle, to fit a detachable sidecar wheel. There are still a number of designs in which the wheel spindle is brazed into the axle tube. This, in the author's opinion, is a deplorable practice, which has only one advantage, that of cheapness of manufacture. Apart from the possibility of weakening the tube in brazing, the trouble of removing the cones, balls, etc., from the wheel hub in order to detach the sidecar wheel has to be experienced to be realised.

An important point to be noted in the design of a sidecar chassis is with regard to the arrangement of the weight distribution on the chassis. The greater part of the load should be taken by the axle tube. In a few instances observed, the whole of the load is on the chassis in front of the axle tube, resulting in heavy steering and excessive tyre wear,

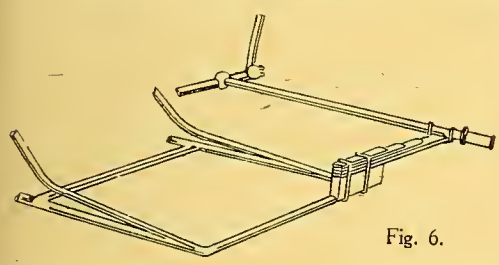

Fig. 6.

due to too much strain being placed upon the steering head of the machine.

**Flexibility in a Sidecar Chassis.**

There is no doubt that a certain amount of flexibility at some point between the sidecar wheel and the frame of the motor cycle is a very desirable feature, as the comfort of the rider of the machine is materially increased and the frames of the motor cycle and sidecar relieved of the unpleasant side shocks due to the sidecar wheel striking an obstruction. Also, the severe strains imposed upon the frame of the machine when cornering would be considerably alleviated in a design which allows the position of the motor cycle to depart slightly from the vertical.

Many attempts in various directions are evident to arrive at this flexibility, and to provide the necessary movement we find flexible sidecar connections and spring-wheel chassis.

One very questionable method still to be found in a few designs is where the sidecar is attached to the machine by means of three long bent tubes. The front connection is often an extension of the inner side member of the chassis, and usually has two right-angle bends. It is claimed

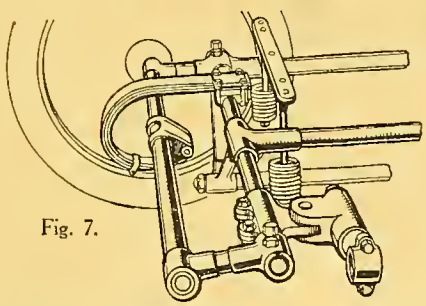

Fig. 7.

that this tube, being long and "whippy," allows a certain amount of flexibility, thus minimising the possibilities of fracture in the cycle frame. This claim is possibly correct, but trouble is practically certain to ensue as the result of following this practice. It is surely most undesirable to rely upon the "whip" of a bent tube to give flexibility, as the tube being stressed in cornering, or even as a consequence of the camber of the road, will eventually take a permanent set at one of the bends, causing the machine to lean inwards and run out of alignment. Breakage of the tube itself is also liable to occur, owing to the crystallisation of the metal in constant "whip." The type of design in question is, in the author's opinion, most unsatisfactory, and one to be avoided, as it is certain that commercial steel tubing has not a sufficiently high elastic limit to be used for this purpose.

The system of providing flexibility by means of correct flexible connections has met with little success in this country, although for many years designs have been applied and tested. The usual form of flexible connection incorporates some form of hinged joint, working in conjunction with a spring to hold the machine in a vertical position when stationary, and allowing the machine to tilt when cornering. The small degree of success the various devices have met with is probably due to the feeling of insecurity experienced when cornering, and the general instability of the machine and sidecar with this type of attachment fitted.

The most satisfactory method of providing flexibility appears to be given in a wheel. Where a spring-wheel chassis is used there is less possibility of the alignment being affected (as is the case with flexible connections), and the machine is permitted to lean so slightly out of the vertical as to be unnoticeable in use.

Many very satisfactory spring-wheel chassis are now in use, and three typical designs are shown in figs. 6, 7, and 8.

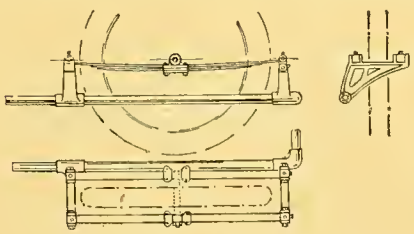

Fig 8.

The A.B.C. (fig. 6) is a commendable design for attachment to a spring-frame motor cycle, and to allow for the independent movement of the rear wheel and sidecar wheel the axle tube is connected to the motor cycle chain stay through a ball type of universal joint. The chassis is connected very rigidly to the frame of the motor cycle, and a leaf spring holds the axle tube in position and gives the required flexibility.

In the Sheffield Henderson design (fig. 7) the axle tube is swivelled from the chassis from two points at the extreme width of the frame, and is held in position by a central laminated spring.

The Grindlay design (fig. 8) embodies a floating hub spindle carried between two half-elliptic springs shackled at the rear. It

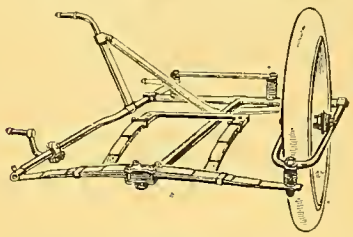

Fig. 9.

will be seen that the wheel itself is practically the only unsprung weight.

**An American Flexible Chassis.**

A typical American design of a flexible chassis is shown in fig. 9. In this design the only rigid member of the frame is the near side tube, which is fixed longitudinally with the machine. The front tubular member, to which is connected the wheel frame, is free to swing on the bearing on the longitudinal member, and carries the coil springs for the front of the body, also a centre tube extending rearwards. On the end of the centre tube is (1) a transverse stay supporting the quarter-elliptic rear body springs, and (2) a long transverse spring, the ends of which are connected to the end of the wheel frame and rigid member respectively.

It will clearly be seen that a great amount of flexibility is afforded by this chassis, and it is largely used for racing in America, as the design allows the machine to lean at an extreme angle.

---

## Motor Coaching in 1922.

THE average motor cyclist has not generally a good word to say of motor coaches, but they represent a very important section of motordom and have come to stay. As a rule, the majority of complaints are caused by the few black sheep of drivers who are found everywhere. The rapid development made in the coach business can be best realised by the special coach number of our sister journal, *Motor Transport*, to be published on Saturday next, which deals with every aspect of the industry from mechanical to traffic control and organisation. There are two matters, however, that will particularly interest motor cyclists; one is the growth in popularity of small sized coaches and the other the development of pneumatic tyres for such machines.

# STIFFENING THE CLASSIC RUNS.

BY the older school of motor cyclists, such time-honoured runs as the M.C.C. provides each year in the London-Edinburgh, London-Land's End, and London-Exeter trips, are followed as much for their sentimental associations as for any kudos to be obtained from "pot-hunting" in these events.

A younger band of motor cyclists, with that iconoclasm which is the privilege of youth, seeks to convert these annual "runs" into stiff competitions in which the gaining of a medal will have more significance than that the recipient thereof completed a certain more or less main road journey in a certain time.

Now before this stiffening up cry is allowed to stampede the Competitions Committee of the M.C.C. into a change of established policy, let the reformers review the status of the M.C.C. events.

These classic runs were originated in the days when it was an achievement to conduct a motor cycle with certitude and reliability from one place to another at the extremity of the country, making use of just such roads as the ordinary tourist might venture upon. If the M.C.C. had any ideas of publicity for the movement, it certainly did not want to demonstrate that motor cycles could *not* do the journeys, but that they *could* complete them. If, nowadays, 98% of the starters cover the runs successfully, the propaganda effect is good, and everyone should be satisfied—except the odd 2%!

### London—Land's End.

Surely, however, it is not the function of a pure club to provide propaganda, publicity or public testing in runs which are only open to its own members; such matters are for the governing body.

Most of the desires for an increase in the difficulty of an M.C.C. run appear to centre on the Land's End trip at Whitsuntide, particularly with regard to the Porlock-Lynton section.

Last year, it will be remembered, the commencement of Porlock to the summit of Lynton (this included the dangerous descent of Countisbury) was made a timed section scheduled at about 19 m.p.h. On account of the necessarily slow speeds of the ascents, some dangerous "blinding" took place in order to gain time on the indifferent level and dangerous down grades in the section. To eliminate this dangerous practice, it would be better to time the ascents of Porlock and Lynton separately—say three miles of the former and one of the latter—setting minimum speeds for each class and type of machine. Should this prove insufficiently difficult, there are worse hills than either Porlock or Lynton in North Devonshire on which gold medals might be lost easier than won; at the same time it would be well to guard the M.C.C. runs from the savour of "colonial trials," a feature which might be introduced by the demands of those unaware of the traditional lines on which the classic M.C.C. runs are conducted.

# THE TOUR DE FRANCE.

GREAT interest is being taken in the Tour de France motor cycle and cycle car 2,300 miles reliability trials, to start from Paris on March 25th, as is evidenced by the seventy-one entries on the closing of the lists at ordinary fees. It is certain that this number will be increased before the final closing, and it is even possible that the increase may be considerable if, as suggested, the acceptance of entries at ordinary fees is continued until February 15th. This change is proposed owing to the fact that foreign firms have requested an extension for the closing date.

According to M. Hamon (President of the *Motocycle Club de France*), who is responsible for the organisation of these trials, an offer of a valuable international cup has been received from a well-known sportsman, and will be accepted if, on the final closing of the lists, there is sufficient international representation for French, Italian, Belgian, British, and American teams to be formed.

One of the features of the Tour de France is the large number of entries in the two cycle car classes, for machines of 750 and 1,100 c.c. respectively. There are twelve competitors in the former class and nineteen in the latter, making thirty-one out of a total of seventy-one in all classes. Out of these thirty-one small cars, it is interesting to note that twenty-six have four-cylinder water-cooled engines. This gives a proportion of practically 84% water-cooled engines to only 16% air-cooled, thus revealing the pronounced tendency of French makers to prefer the small four-cylinder water-cooled engine in place of the air-cooled twin receiving so much attention in England. All the cycle cars are regular trade entries, with experts at the wheels; they are being prepared with the very greatest care, for it is recognised that 2,300 miles at an average of nearly 25 m.p.h. will constitute a trial of no mean order. It is hardly necessary to say that trade rivalry runs high, and that the performance of the competitors on the road will be followed with the closest attention.

### British Machines.

The motor cycles in the Tour de France vary from 250 c.c. solo mounts to 1,100 c.c. sidecars. The British representatives are B.S.A., Velocette, Levis, McKechnie, and Sunbeam, with indirect representation in the Yvels, made up almost entirely of British parts. Several entirely new models will make their appearance in these trials, among them being the Gnome and Rhône single-cylinder four-stroke which made its appearance for the first time at the last Paris show. The A.B.C. is built by the same firm, but only one machine is entered, with Naas as rider. The Blériot in the 500 c.c. solo class will be a new model with three-speed gears, while the 1,100 c.c. sidecar of the same make will be an entirely new production. There will be four water-cooled motor cycles in the trials, all of them being Viratelles. Two are in the 350 c.c. solo class, one in the 750 c.c., and another in the 1,000 c.c. sidecar class. The Janoir is another rather original French machine, which, although announced some time ago, has not yet figured in public competitions. It is a flat twin of 965 c.c. with aluminium cylinders having steel liners, forced feed lubrication, a three-speed gear box combined with the engine, and a special type of pressed steel frame.

The following is the list of the motor cycles entered:

250 c.c. Solo.
1 Levis, 2 Velocette, 2 Soyer.

350 c.c. Solo.
1 D.F.R., 1 Rasser, 2 Yvels, 2 Viratelle, 4 Gillet.

500 c.c. Solo.
1 Sunbeam, 1 A.B.C., 2 Blériot, 2 Gnome and Rhône.

750 c.c. Solo.
1 Viratelle, 1 B.S.A., 1 McKechnie, 1 Indian, 1 Harley-Davidson.

600 c.c. Sidecars.
1 D.F.R., 1 Sunbeam.

1,000 c.c. Sidecars.
1 Sunbeam, 1 René Gillet, 1 Blériot, 1 Viratelle, 2 Indian, 3 Harley-Davidson, 3 Janoir.

# FORTHCOMING IRISH TRIALS.

THE prospect of more settled conditions in Ireland which is foreshadowed by the improved political situation is likely to result in 1922 being a year of great activity amongst Irish clubs. The manner in which the majority of the clubs succeeded in carrying on during the troubles of the past two years created admiration; despite radius restrictions and trenched roads, most of them succeeded in carrying out a competition programme. Circumstances were too strong in some cases, however, and two of the Irish classic events, the End-to-End and the Cork "Twenty," another strenuous reliability trial, had to be abandoned last year.

Although the Ulster Centre of the Motor Cycle Union has not yet moved in the matter, it is regarded as more than likely that the End-to-End will be held as usual in July next. In the south, the Southern Centre of the Union has already sanctioned the dates of two of the classic events of previous years, namely the Dublin "Twenty-four," which will be held on the 23rd-24th June, and the Cork "Twenty" on Whit-Monday, June 5th. Interest in the first-mentioned trial will be enhanced by the fact that Mr. W. H. Freeman has presented to the club a fifty guinea challenge trophy as a perpetual prize for the winning team in the event.

# COX "ATMOS" CARBURETTER

## STOP THE ROT!

*OBTAIN HIGH EFFICIENCY FROM YOUR MACHINE EFFICIENCY OF A SUSTAINED CHARACTER THAT WHILST PRODUCING THE GREATEST POSSIBLE POWER, AT THE SAME TIME PROLONGS THE LIFE OF THE ENGINE.*

*SUCH EFFICIENCY AND ENGINE LIFE IS TO BE OBTAINED BY USING A COX "ATMOS" SINGLE LEVER CARBURETTER — THE ONLY KNOWN SINGLE LEVER CARBURETTER THAT PERFECTLY ATOMIZES THE FUEL AND DELIVERS A CORRECT MIXTURE TO THE ENGINE AT EVERY POSITION OF THE THROTTLE, AND UNDER ALL CONDITIONS.*

*A FEW OF THE ADVANTAGES:—*

*EASY STARTING,*

*FLEXIBILITY,*

*INCREASED POWER AND SPEED,*

*A QUIETER EXHAUST, WHICH MEANS BETTER COMBUSTION AND FUEL ECONOMY,*

*MUCH LESS CARBON DEPOSIT,*

# PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

# PULLEY

AND GEAR COMBINED.

# Philipson's Latest!

## GOVERNOR PULLEY AND VARIABLE GEAR COMBINED WITH FLY WHEEL for all two-stroke engines.

**The Lightest, Speediest, and Simplest Gear on the market for direct belt-driven 2-stroke and 4-stroke engines.**

ONLY adds 2 lb. (approx.) to the weight of a 2-stroke machine, and 6 lb. (approx.) to the weight of a 4-stroke machine.

**During the past week we have fitted the following machines:**

| 2-stroke. | 4-stroke. |
|---|---|
| LEVIS, | TRIUMPH, |
| O.K., | NORTON, |
| CALTHORPE, | ROVER, |
| VILLIERS, | SINGER, |
| etc. | COULSON-BLACKBURNE |

**We are now in a position to supply the Philipson Pulley to fit J.A.P. engines without any alteration to the machine or "staggering" of the engine.**

Our Flywheel Governor converts a single-speed 2-stroke into a speed model —*the lightest speed model on the market!*

**THE ONLY GEAR WITH NO END THRUST.**

**IMMEDIATE DELIVERY.**

*Send for Illustrated Booklet.*

**No gear box friction.**
**No grinding noises.**
**No wheels or pinions to chew up.**

*What is your make? Write us*

REDUCED PRICE £7 7 0 Carriage Paid.

# "THEY SERVED ME WELL!"

This is the character given us by a customer when writing of The Eastern Garage Co. to a friend, and we do our utmost to live up to this good name in every transaction we carry through.

If you will get into communication with us you will at once realise that your enquiry is being dealt with in a businesslike manner, and throughout the negotiations it will be obvious to you that we are endeavouring to give effect to your every wish and ensure your satisfaction.

Whether you make a cash purchase from us, exchange your old machine for a new one, or avail yourself of our Deferred Payment Scheme, you will receive the same courteous attention, the same straightforward treatment, and the same efficient service that prompted our customer to say :—

**"THEY SERVED ME WELL."**

Your first step in securing a motor cycle that will fulfil your requirements is to write for our New and Second-hand stock lists. The cash and deferred payment prices are shown clearly against each machine, and when you have selected a few that are likely to suit you, we will furnish the fullest possible details of each to enable you to make a final choice.

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

**IMPORTANT AGENCY EXTENSION**

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

| 610N. Ball Bearing, 1 in. | 10/9 | 8/- |
| 611N. " " 19 mm. | 11/6 | 9/- |

**EXTRA LARGE TOOLBAGS,** metal armoured, two straps and buckles, finest quality for 4 h.p. Douglas. Usual price 20/-. My price **12/6.** Smaller size for 2¾ h.p., two straps and metal covered real leather. List price 11/-. My price **9/-.**

**A SADDLE OF REAL MERIT.** Pan Seat covered in real leather, adjustable springs, gives a low riding position on 2¾ h.p. and does not foul the 4 h.p. Sidecar Stay. A real comfy seat. List 35/-. My price **25/-.**

**EXTRA HEAVY PASSENGER SUPER STUDDED HUTCHINSON TYRES.** New stock, fully guaranteed, only a few 26×2¾" and 28" left. List 49/6, my price **38/-.** This offer cannot be repeated, as they are not W.D. soiled or damaged stock like many others advertised.

**SPECIAL LODGE PLUGS,** Mica with radiating fins. The best plug for hot stuff engines. New, in original boxes. W.D. surplus. List 8/6 to clear, **2/9.**

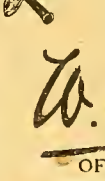
**BLACK METAL LINED INFLATORS** with long connections and foot attachment to fit Douglas Clips. List 8/6, to clear **6/-.**

**HUTCHINSON HEAVY TUBES,** 26×2¾ or 2¼", to clear **5/-.**

**EXHAUST BAFFLES** for 2" Pipes, fixed in one minute, a real police dodger, where they're hot, **2/6,** and a host of other lines cheap.

Now for some of **MY OWN SPECIALITIES. TWIN RINGS,** real power producers, oil savers and compression makers for 2¾ h.p. and 4 h.p. Douglas. 2¾ h.p., **1/6** each; 4 h.p. **1/8** each. Made under a patented process; don't be misled—insist on your agent fitting them.

**ALLOY AIR COOLED VALVE CAPS** for 2¾ h.p. and 4 h.p. Douglas, as fitted by the Grand Prix winners and T.T. riders. The original and best. If they don't stop your engine knocking and prevent overheating, send them back. **4/-** each.



**ZOOM! ZOOM!!** The Exhaust System that everybody is talking about. It gives extra power, has a lovely Zoom note that offends nobody. A real coppersmith's job. Adds £10 to the appearance of any Douglas. My price **30/-** in burnished coppered finish, **3/6** extra in nickel-plated finish. Mr. Charles Stagg, Newport, says: "I received the pipe before the Speed Trial and won the Challenge Cup."

TRADE SUPPLIED.

## IGNITION, LIGHTING, ETC.

MAGNETOS Overhauled, repaired, returned in 2 days as new, guaranteed for 12 months, from 15/-; no price exceeds 35/-.—Turner Bros., Motor and Electrical Engineers, Summerseat, Manchester. [7194

CONTINENTAL Ignition Repair Co.—We repair Continental magnetos only. By specialising on Bosch, U.H., Eisemann, Mea, Splitdorf, Dixie, and Berling magnetos, we can naturally give you better service.

PRICE; Rewinding 18/-, condensers 10/-, platinum screws (Bosch standard) 6/-, remagnetising 2/6, slip rings 6/6, H.T. terminals 4/6. Our price for overhauling a motor cycle magneto ranges between 20/- and 35/-, and never exceeds the latter figure. Guaranteed for 12 months, and redespatched to you in 2 days.

CONTINENTAL Ignition Repair Co., 13, Hardwick Rd., Chiswick, London. [3758

MAGNETOS.—New Thomson-Bennett 180° Twin Anti Clock, all perfect, but less bush holders; 35/- each, carriage 1/6 extra.—187, Elm Rd., New Malden. [7565

C.A.V. Magnetos.—Extraordinary bargains.—Brand new 180° twin- or single-cyl.; 38/6, carriage free. Every magneto thoroughly tested before dispatch; approval against cash.—Below.

BOSCH Magnetos.—We specialise on the repair and overhaul of these magnetos. Every repair guaranteed; lowest prices.—Langford's, 37, Cricklewood Broadway, London, N.W.2. [8009

RECONSTRUCTED Magnetos.—Every make and type in stock; not ex W.D. junk; English and Continental makes from £2/5, with a 12 months' written guarantee.—Standard Magneto Co., 55, Churchfield Rd., Acton, London. [7581

THOMSON-BENNETT Magnetos, unused, W.D., guaranteed perfect, single or 180° twin, variable ignition, switch terminal and leads, clock or anti; £2, postage 1/6; week's approval against cash.—Brockbank, 58, Lord St., Southport. [0756

U.H. Magneto Repairs.—We specialise in these magnetos, and can be relied upon to give you good service. A1, B1, AO, KB1, KB2V, KZ2V type spares stocked; prices moderate; 12 months' written guarantee.—Charles Parker and Co., Churchfield Rd., Acton, London. [4455

21/- is all I charge for a thorough overhaul of your magneto, which includes fitting new platinum points and a guaranteed repair in three days.—Brooker, Ignition Specialist, Wood End, Long Hanborough, Oxon. [7946

LIGHTING Dynamos, contained in Government surplus mine exploders, dynamo will light seven 10-volt lamps in series, all as new and perfect, 17/6 each, or 22/- each, carriage paid passenger train; stamp for detailed particulars; three days' approval against cash.—Galpin, rear of 35, Milton Court Rd., New Cross, London, S.E.14. [7385

SURPLUS Magnetos, with written guarantee one year: M-L single, 35/-; B.L.I.C. ditto, 42/-; Bosch ditto, 45/-; Thomson-Bennett and C.A.V. singles and twins, 50/-. We specialise in repairs and spares for all makes. Lists with pleasure. Deal with experts and avoid certain disappointment.—Whitdale Magneto Service, Cherry Orchard, Croydon. 'Phone: Croydon 1625. [6910

SPLITDORF Magnetos, single, anti clock, variable ignition, and guaranteed perfect; 38/-. Please note, these magnetos are not reconstructed or converted starter magnetos. They are the real thing designed for a motor cycle (not an aeroplane); if you are out to buy a magneto, buy the right thing.—Marble Arch Motor Exchange, 135, Edgware Rd., W.2. 'Phone: Padd 789. [7975

THE Magneto Repairing and Winding Co. (established 1912), contractors to H.M. Government, and officially appointed by the R.A.C. Magneto repairs of every description; all repairs at lowest possible prices, and strictly guaranteed. We can mostly return them within 24 hours. We have several new and second-hand single and 2-cyl. magnetos in stock, all guaranteed.—The Magneto Repairing and Winding Co., 78, Hampstead Rd., Euston, London, N.W.1. 'Phone: Museum 1158. T.A.: Kumagnelec, Eusroad, London. [2445

EUSTON Ignition Co.'s 24-hour repair service. Guaranteed repairs to all types of magnetos; Splitdorf and Dixie specialists; official Indian electrical service station; Thomson-Bennett repaire and spares. All repairs are tested on an approved A.I.D. test bench before despatch, and therefore carry our guarantee for 12 months. We hold the largest stock of guaranteed magnetos in London, twins all degrees; spare parts for all makes in stock; charged accumulators, all voltages, always ready in stock; plugs, cables, ½-watt and vacuum bulbs, all voltages. We give you real live service always.—Euston Ignition Co., 329, Euston Rd., London, N.W.1. 'Phone: Museum 5034. T.A.: Magdyno, Eusroad, London. [0265

# SPRING WILL COME

although we admit that it does not look much like it now.

The point we would make is that when the weather outlook is bad, second-hand prices are down, and that is when the wise man buys. In the Spring £10 goes on the price of every used motor bike, so that is an argument in favour of buying to-day.

And now for an argument in favour of buying from us.

## EVERY SECONDHAND MOTORCYCLE

which we sell as our own property (as distinct from motorcycles sold on commission) is stripped in our works and necessary repairs done. Thus we know they are sent out sound, and they are

## GUARANTEED FOR THREE MONTHS

on the same terms as the makers' guarantee. We give this guarantee because we recognise that second-hand motorcycles are viewed with suspicion, often for good reasons. We offer the following to-day:—

| | | |
|---|---|---|
| 1915 | 7/9 Indian, 3 speed and sidecar | £85 |
| 1920 | 7/9 Indian & Henderson Elite Sidecar | £140 |
| 1919 | 7/9 H.P. Indian (solo) | £63 |
| 1919 | 4 H.P. Norton & Milford Sidecar | £90 |
| 1921 | Model 16 H. Norton 3½ three speed | £90 |
| 1921 | Big 4 Norton, De Luxe Sidecar, All on | £120 |
| 1921 | Velocette two speed | £47 |
| 1920 | 2¾ Zenith (Flat twin) | £60 |
| 1920 | 4 H.P. Wilkin & Sidecar, Blackburne engine, dynamo lighting | £105 |
| 1914 | 6 H.P. A.J.S. & Sidecar, All on | £75 |
| 1920 | 3½ Sunbeam, All on | £90 |
| 1921 | Sports Model Sunbeam | £95 |
| 1920 | 5-6 H.P. Rudge Combination | £70 |

## GARAGES.

TO Let, in Ramsey, Isle of Man, during T.T. races, premises suitable for 6 or more machines.—Apply W. Kewley, Market Hill, Ramsey, Isle of Man. [7113

## GENERAL TRADE.

AUCTION Sales.—Palmer's Garage, Tooting, the oldest solely motor auction rooms in London. Terms, 7½ per cent., not chargeable if machine unsold. Motor cycles and cars bought and sold for cash. Nearest goods stations, Falcon lane, L. and N.W.R.; Wimbledon, L. and S.W.R. and G.W.R.—Sole address, Palmer's Garage, Tooting, London. [7952

## WANTED.

SCOTT Chassis, late model appearance no object.—6, Steiner St., Accrington. [7052

WANTED, Premier 3-speed, K.S. gear box.—24, Michea St., Port Talbot [7188

WANTED, Late W.C. Morgan for cash.—B. M., 497, Old Ford Rd., Old Ford, E. [7475

CYLINDERS for 6h.p. Rex a.i.v. Engine, complete. —Stael, Meopham Station, Kent. [7123

TRICYCLE with 2h.p. motor attachment.—Doctor Field, 1, Cambridge Place, Falmouth. [8011

TWIN Rex Frame, 1914, 6-8h.p.—Number and particulars to Lingfords, Coxhoe, Durham. [7167

MODERN Clyno Sidecar Body and Windscreen wanted.—Hollings, Llanidloes, N. Wales. [7115

MATCHLESS-J.A.P., 4-5h.p., 1915, P.S. ½, crank-case, wanted.—Barnview, Medstead, Hants. [7579

TRIUMPH Clutch Wheel, with chain stays and brake.—Bnotman, Easton Neston, Towcester. [7663

A.B.C., dynamo lighting, condition perfect not essential; reasonable figure.—164, Broadfield Rd., Catford. [7703

WANTED, Sidecar Chassis with wheel, suitable 8h.p. Enfield.—Ernest Walter, Lower Bentham. [7176

SIDECAR, underslung; good condition, make, and full particulars.—18, Approach Rd., St. Albans. [7572

N.S.U. Gear, any condition; also Grados, Philipsons, Albions; cheap.—Box 8567, c/o *The Motor Cycle*. [7749

WANTED, 2½h.p. J.A.P. cylinder, complete A.I.V.; sound.—Bratton, Sandhill, Winslow, Bucks. [7694

SCOTT Rear Sprockets, and other parts, in good condition.—Ward Motors, Ltd., 32, Hustler St., Bradford. [0784

J.A.P. 8h.p., rear cylinder, 1910 pattern A.I.V., 77½ mm. bore; also piston.—20, Horsell Rd., Highbury. [7776

WANTED, Autoglider, first-class condition, lowest price.—Full particulars, Bain, 52, Nares St., Scarborough. [7258

£7 offered for good 3-speed gear box, S.A. or other approved type.—19, Wilcox Rd., South Lambeth, London. [5975

## WANTED.

WANTED, magnetos and spares, any condition, for cash.—Charles Parker and Co., Churchfield Rd., Acton, London. [7633

WANTED, second-hand 3½h.p. Zenith, Gradua gear, complete with pulley.—Walker, 71, Stuart Rd., Peckham Rye, S.E.15. [7053

5h.p. Twin P.F. Engine, complete; cheap for cash. —Write Refreshment Bar, Tram Terminus, Wilmington, Dartford, Kent. [7054

WANTED, Lightweight motor cycle frame complete, suitable for Villiers engine wheels, carburetter.—Huntrod, Danby, Yorks. [7711

WANTED, good up-to-date second-hand motor cycle accessories; state particulars and price.—Service Co., 292, High Holborn, W.C.1 [0671

WANTED, 8h.p. Clyno chassis ammunition carrier, with all couplings, new; ex W.D.—Particulars, W. C. Hurling, Butterwick, Boston. [7484

BRADBURY cylinder and piston wanted for 1913 4h.p.; good condition essential.—Barrett, 77, Hartsholme Drive, Swanpool, Lincoln. [7692

WANTED, Sturmey Heavyweight Gear Box, chain-cum-belt, new condition.—Fullest particulars, Huxtable, Chittlehampton, Devonshire. [7261

WANTED, 2-seater De Dion, Rover, 1 cylinder, real good; cheap.—Douglas S. Cox, West Norwood. 'Phone, Streatham 1370. [8017

WE make a good offer on sight for motors in any condition.—Smith's, 86, Chalk Farm Rd., opposite Chalk Farm Tube Station. [7915

2-SPEED Box and Shaft incorporated, for 4-cyl. F.N.; one needing repairs not objected to; good price given; urgent.—Box 8483, c/o *The Motor Cycle*. [7103

WANTED to Purchase Outright for cash, backyard stocks. W.D. spares, miscellaneous spares. Send full particulars.—McNeille and Platt, 57, Gt. George St. Liverpool 'Phone: 1092 Royal [2488

DRUID, Saxon, or Brampton Spring Forks, in any condition, purchased for cash; good value given for smashed or bent girders or any parts.—Rayner, 6, Temple Row, Birmingham. Bankers, Lloyds. [7488

## EXCHANGE.

EXCHANGE 1914 4-seater R.M.C. for combination or solo.—24, Geraldine, Chiswick. [8038

5-SEATER touring car, dynamo lighting, for good combination.—Crown Garage, Weybridge. [7470

EXCHANGE 4 Magnetos for Scott Sidecar; cash adjustment.—Smith 20, Park Crescent, York. [7119

EXCHANGE Auto-scooter and Lady's Cycle for good 2-stroke.—Allston, 17, Oster Terrace, St. Albans. [7333

EXCHANGE your present machine for a new car or motor cycle at Kays, 8, Bond St., Ealing. [7231

LONG Copper Exhausts for Douglas, cost £1; best offer, exchange pillion.—Paulson, Edale, Sheffield. [7174

EXCHANGE Piano Player, valuable old violin, for motor cycle.—88, Replingham Rd., S.W.18. [7272

EXCHANGE £15/15 Table Grand Gramophone for anything motorish.—76, London St., Chertsey. [7608

4-5-SEATER car, sound, for motor cycle and a little cash.—9, Jubilee Terrace, Broomfield Rd., Chelmsford. [7450

HALIFAX.—1922 Coventry Premier Light Car for good combination and cash.—Motor Exchange, Horton St., Halifax. [7909

SWIFT 2-seater for late lightweight Douglas preferred, and £12.—Cooper, 36, Milton Rd., Margate. [7652

EXCHANGE A.B.C. 1921 dynamo, speedometer, etc., for Norton, or sell.—82, Caledonian Rd., London, N. [7499

AUTO-WHEEL, bicycle, both perfect, for 8h.p. air-cooled engine; cash adjustment.—Hall, Laughton, Rugby. [7452

4h.p. Engine, watertight, Bosch, as new, for Sturmey gear box chain; sell £10.—17, Worthington St., Leicester. [7189

1921 Rudge-Multi, practically new, and cash for 1920 Douglas combination.—1, Ombersley Rd., Worcester. [7713

EXCHANGE 1918 P. and M. Combination for good lightweight; cash adjustment.—Box 8548, c/o *The Motor Cycle*. [7330

1920 2¾h.p. 3-speed C. and K. Douglas, plus cash, for Sports Sunbeam, or similar.—Buxton Station, Belper. [7173

EXCHANGE 3-ton Daimler Lorry, good order, for car, combination, or what offers?—Box 8550, c/o *The Motor Cycle*. [7323

1921 Coventry Eagle, gap, tax, all on, Sturmey gear, for combination or solo; cash either way.—174, Avenue Rd., Acton. [7490

UNIC Taxicab 12h.p., 2 cylinders, splendid order, overhauled; £65; exchanges considered.—63, Solon Rd., Brixton. [7557

SEDIA 2-seater Light Car, as new; exchange twin combination and little cash.—Spurling, 8, Conrthope Rd., Hampstead, N.W.3. [5848

## As Others See Us.

IT may surprise many of our readers to learn that manufacturers of the best known American motor cycles consider long-distance events, such as the London-Edinburgh run, of greater importance from a publicity standpoint than the Tourist Trophy races.

To British motor cyclists this view may, at first, appear somewhat strange, but, studied in conjunction with the state of affairs in the United States, the opinion referred to has certain significance.

At the present time America is suffering a trade depression such as she has not experienced for many years, and, as is usual at such times, a close study is being made of the true value of different methods of propaganda. As a result of this, track racing is at a discount, and, while another reason is given by enthusiasts on the other side of the Atlantic, there is no doubt that, as part of a publicity campaign, track racing has been proved to possess a purely local value. In other words, if and when phenomenal speeds are attained in America the rest of the motor cycle world (if the achievement obtains prominence) is unconcerned, or doubts its authenticity.

On the other hand, the attainment of a success in a leading British reliability trial or race is accepted as authentic the world over because it is endorsed either by a club of unquestioned integrity and independence or by the governing body of the motor cycle movement in a country whose traditions have always upheld clean sport.

This fact is significant and accounts in no small measure for the decision of leading American factories to curtail track racing in the United States. One factory, too, has decided to again support the T.T. races, and it may be taken for granted that the two best known American motor cycles in this country will be represented in the leading reliability events held here.

A decision of this kind is encouraging to British clubs, and an incentive to improve still further regulations governing the leading contests.

In sober fact, Great Britain is recognised as the arena for motor cycle competitions, and the results are reflected, and therefore influence trade, throughout the world.

## Varying Garage Charges.

FROM time to time—especially during the summer touring season—we receive complaints from readers of excessive charges for garage accommodation. Some of these complaints appear to be justified, as a shilling and sixpence is too high a figure for the temporary storage of a sidecar while its owner seeks refreshment.

It would appear that the edict of the Petrol Combine to the effect that the value of anything is the price the public will pay has been adopted by certain garage proprietors. In those cases of alleged overcharge which we have investigated, we have found that the fixed idea has been to obtain a full year's profit in the few months when visitors may be expected.

This may, or may not, be sound business, but it would undoubtedly prevent heartburning if garage charges were posted conspicuously to serve as a guide to would-be patrons. Garage charges for motor cycles vary from sixpence to a shilling and sixpence per hour; consequently there is every reason for a motor cyclist to consider himself overcharged when asked to pay the latter figure, particularly if, on the previous day, the charge was a fraction of that amount. Though seaside garages are most often complained of, inland garage charges are by no means uniform.

This unsatisfactory state of affairs appears to offer further scope for the activities of our motor cycle organisations, the A.C.U. and the A.A., which might classify and standardise garage charges by arrangement with the proprietors.

An index to the advertisements in this issue will be found on the page facing the back cover.

## At Last.

I HAVE owned innumerable machines, but never till this month did I own one with really rational toolbags. I have a fluent pen, but it is not nearly so fluent as my tongue, when the latter is duly roused; and thrice in 1921 did I dismount at the other end of nowhere to effect a repair and find the flap of one of my panniers hanging disconsolately downwards, revealing an empty space above it. This catastrophe is extremely unlikely to occur with my present mount. The toolbags have sliding claws; locks with a key which is certainly small enough to be easily lost, but is at least so strong that its wards won't twist off, as befell twice in 1921; and, finally, a cunning little vertical catch, which just safeguards the radially sliding claw from jarring off its catch. Of course, the bags aren't big enough to please me; but that too may come in time.

## Chain Waves.

MR. HALLIDAY TURNER may be perfectly correct in supposing that the waggles of a chain running at high speed occasionally permit a tooth to get ahead of itself, so to speak, though I doubt it. He has forgotten that my paragraph (to which he refers) concerned a spring frame. I had newly adjusted my rear chain, and was pottering happily along with the sun on my flank, when I suddenly caught sight of the shadow of my chain on the road, and nearly expired of heart failure on the spot. In this case the eccentric looping of the chain must have been chiefly due to the spring frame, which was not pivoted at the sprocket centre. It would be interesting to know if any research student has cinema'ed a chain in action with the Ultra-Rapid film camera. There is also an excessively ingenious device known as the Oscilloscope, with which the naked eye can watch an exhaust valve bouncing on the cam as if it were a child's hoop flopping to rest. Until such a test has been made, I shall continue to feel dubious about Mr. Turner's diagnosis. But all these things can be proved—does not Professor Boys photograph shells quitting the muzzle of a gun?

## A Bright Idea.

THE above mention of the ultra-rapid camera reminds me that there are a lot of films which I want to see it attempt. In particular, as a lad who plays golf of the 36 hcp. variety when all his bikes are broken down, I want to see it register Abe Mitchell's drive. Even more do I wish to see it photograph George Dance climbing Park Rash. Will some clubman with what the Americans call "film affiliations" please arrange for a few hundred feet of these crawly pictures to be ready for the next Show, or the 1922 club dinners, or the Manx week?

## Why?

THREE of my friends have just taken delivery of their 1922 machines. Each machine in the trio has plated wheel spokes. Rain was teeming down when the 'buses reached the local station, but who will blame the bridegrooms if they incontinently took the road? It was a pitiful sight on Sunday morning to see these three owners busily rubbing up their spokes with Globe polish. Despite the huge advances which galvanising rustproof processes have made lately (witness the dull grey barrels of K.L.G. plugs), one expects a lot of plated nuts and lugs and rods and tubes on a motor cycle. But *why, why, why* need we clean the spokes? If the makers won't dull-proof them, let us at least have them stoved. It was raining when my own new 'bus arrived. Did I take it on the road? Not much. I got out a tin of Howes' "Corrosine," and as that by no means sufficed to finish off the whole of the plated area, I used it for the parts which I was most likely to finger. For the rest I used some Price's hub lubricant, melted down on the kitchen range.

## Wanted, Perfect Goggles?

A MIDLAND rider seeks my aid in selecting the perfect goggle. Ordinary glass he considers perilous in the event of a crash. Triplex is usually built up with open sides, so that your eyes get full of foreign matter and chilled by side draughts (I have used a Triplex mask, but do not know if it is still procurable). Mica distorts the vision. Being a fearless person, devoid of medical knowledge, I buy any old pair and do the same again when I break the originals. Gentlemen, the ball is open. Any grafter desiring a free advertisement for his patent goggle may write to the Editor, belauding the same, and it will be inserted in our correspondence columns—perhaps.

## How do the Miniature Sidecars Wear?

MY POSTBAG makes it evident that plenty of canny people are open to buy lightweight sidecar outfits as soon as they are assured that continuous hard pulling does not abbreviate the life of the engine, and that the featherweight construction of the chassis does not lead to expensive fractures in the second year. In other words, they nourish the suspicion that the ultra light outfit is a good first-year 'bus, but might not be dependable or economical in its second season. The suspicion strikes me as unjustified. No sane manufacturer is going to market a proposition which will presently make his name stink in the public nostril. The lightweight sidecar is so juvenile that the mass of riders can possess no personal knowledge of its stamina. But the manu-

**Occasional Comments.—**

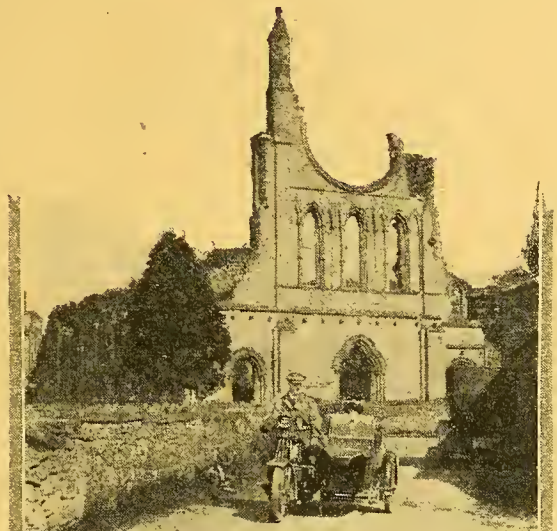
facturing concerns do not list it and push it without ample data, and we may take it for granted that they are satisfied with their own experimental tests. It must be remembered that these tiny engines have already proved themselves gluttons for continuous hard work in solo frames, and that cooling has made such strides that the extra load no longer worries an engine. So far as the chassis is concerned, its lightness is obvious; but, on the other hand, its comparatively low road speed limits the stresses to which it is subjected. I have no doubt that they will last quite satisfactorily.

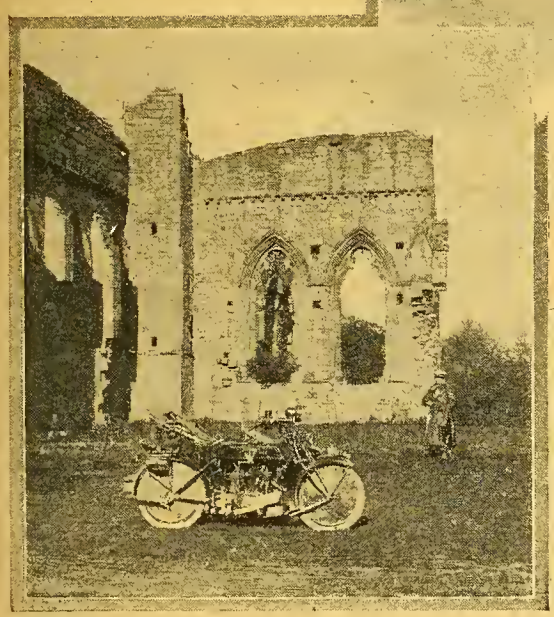
## The Ricardo-Triumph.

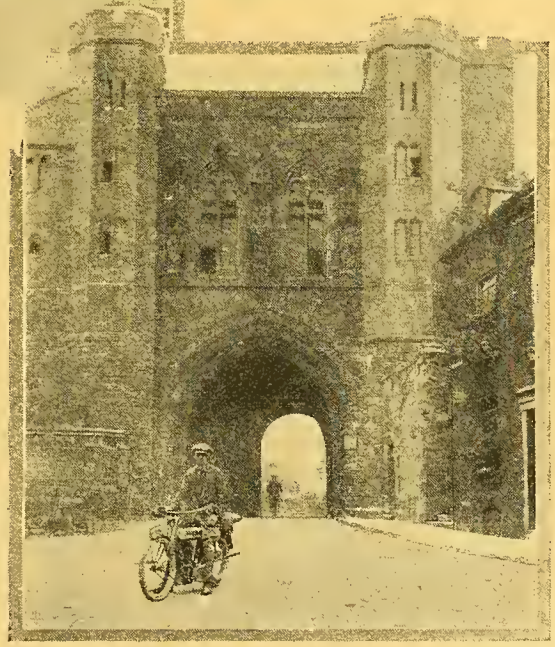
I HAVE just taken delivery of a four-valve Triumph (no, it wasn't *my* picture that graced *The Motor Cycle* of December 29th, though he is a nice fellow enough). Readers may be surprised to hear that it is neither the speed nor the acceleration which have so far impressed me most. The high spot of the machine is its great comfort. It hammers one more nail—a big one—in the coffin of narrow tyres. The second item which amazed me is the transmission. The indirect gears are as near silent as can be, and the all-chain drive tugs considerably less than a tight belt would do when the engine is pulling slowly. Under circumstances where docility is required, such as starting up, or dodging through heavy traffic, she is as meek as a tame rabbit; but open the throttle, and she feels just like a Waterloo Cup winner looks.

## "Assembled" Machines.

THEOLOGIANS accuse their opponents of "invincible ignorance," and Mr. G. R. Morgan will suspect me of that vice if I stoutly assert that I have not changed my views on assembled machines by the breadth of a whisker. If all his arguments were sound, surely there wouldn't be any assembled machines on the market, as nobody would buy a type which was more expensive, depreciated more rapidly, and enjoyed inferior "service." Probably both he and I generalise rather too easily. However, I will make a confession which will charm the soul of Mr. Morgan and other enthusiasts for the special design. Once upon a time I owned quite a succession of assembled machines, all built by smallish concerns. The purchases were inspired by two motives. First, I could get my own fads incorporated in the specification. Secondly, they were cheaper than parallel specifications of special design, because the "establishment charges" item in their costing was nothing like 25%, as it often is with a special design (I fancy this saving tends to be balanced nowadays by the economies of scientific manufacture). I chose them cannily, and the "service" which I enjoyed with them was equal to the best service that the big factories give, and better than I can obtain to-day from certain ill-organised and ill-managed concerns. But I have not bought an assembled mount for years, and I can state my reason in a nutshell—they depreciate much too heavily.







HAUNTS OF ANTIQUARIANS.

(Top.) Ruins of the west front of Byland Abbey, a few miles from Thirsk.

(Left.) The remains of Egglestone Abbey, near Barnard Castle, Durham.

(Right.) Old gateway at Worcester, known as the Edgar Gate.

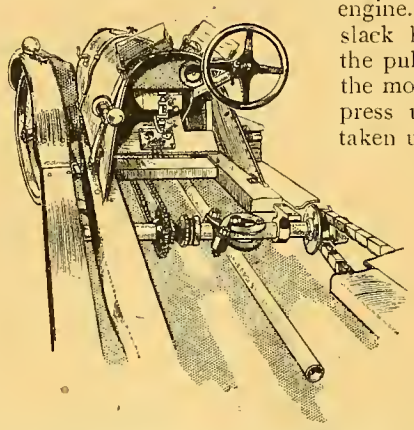
An A.J.S. outfit and a Triumph figure in the illustrations.

# PASSENGER MACHINE TOPICS.

## Jottings on Matters of Interest to Owners of Sidecars and Cycle Cars, not to mention their Passengers.

IT is accepted as a firm rule that, the larger the machine, the greater the tyre wear. The writer has not found this to be the case, and the heaviest sidecar outfit owned—an 8 h.p. with double-seater sidecar—has given the greatest tyre economy. It is speed and incorrect sidecar alignment that are responsible for tyre wear more than weight, provided, of course, the machine is adequately tyred.

On this point, some time ago, we received a letter from The County Cycle & Motor Co., of Birmingham, who specialise in taxi sidecars. They stated that, after a 3 months' careful observation of a number of vehicles plying for hire in Birmingham, they found that, up to a mileage of 6,000, it had not been necessary to replace a single cover. The tyres used were Dunlop and Palmer, but some credit is due to the excellent shock absorbers fitted on the big twin B.S.A. machines, and, it was emphasised, to the perfect alignment and balance of the vehicles.



Governor device on the countershaft of the Tondeur cycle car by which the gear ratio is altered automatically by the speed of the engine.

DESIGNERS of cycle cars are still favourably considering belt drive, and two of the machines illustrated here are so equipped. The Tondeur is chiefly interesting as regards the method of transmission employed and the type of springing utilised. It is the invention of a young Belgian engineer, Mr. R. Tondeur, who, began his experimental machine in 1914. It was not complete when war broke out, and when he went to look for it after the armistice he found that all the brass portions had been removed by the enemy.

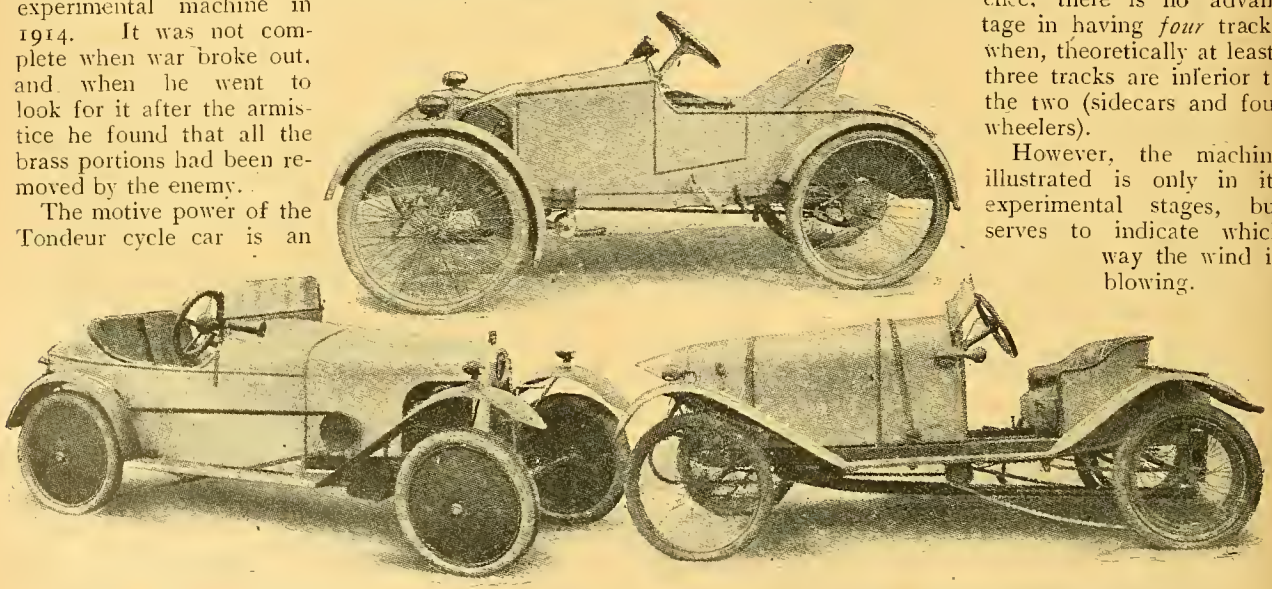
The motive power of the Tondeur cycle car is an M.A.G. engine with battery-cum-dynamo, for lighting and ignition. It is therefore one of the few vehicles with which this journal deals in which a magneto is not employed.

The drive from engine to countershaft is by means of a chain. The chief novelty in the design consists of a peculiarly shaped governor which automatically controls the diameter of the belt pulleys by expanding or contracting them according to the speed of the engine. When at rest the belts hang perfectly slack lying on loose rings at the bottom of the pulleys. When the engine is accelerated the movable flanges in the pulleys immediately press up against the belts and the drive is taken up. However efficient this may be, we think that bygone failures to make variable pulleys a success will prejudice prospective buyers.

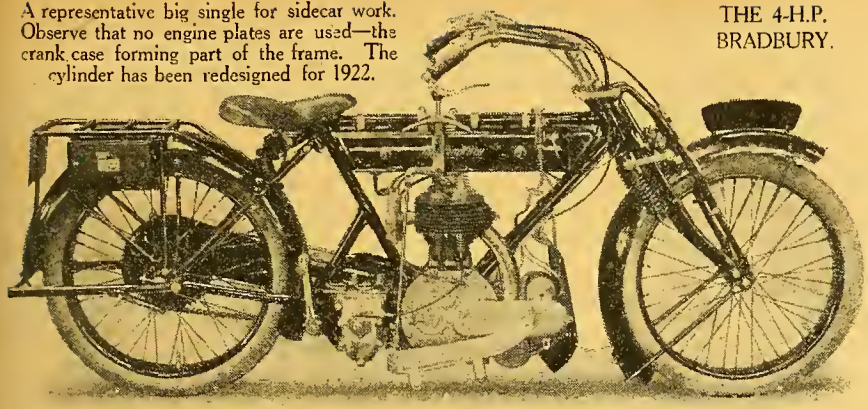
The address of the designer is R. Tondeur, 38, Queensborough Terrace, Bayswater Rd., London, W.2.

THE second cycle car shown on the left of the group is known as the Foster, and has a flat twin engine and pulleys of practicable size. The third machine is a monocar, but this vehicle has not belt drive. It is an experimental machine, produced by the Eastbourne Aviation Co. Like the Peugeot Quadrilette, the wheel tracks at the front and rear differ, that of the front being 43in., while the rear wheels span a track only 27in. wide. Except for manufacturing convenience, there is no advantage in having *four* tracks when, theoretically at least, three tracks are inferior to the two (sidecars and four wheelers).

However, the machine illustrated is only in its experimental stages, but serves to indicate which way the wind is blowing.



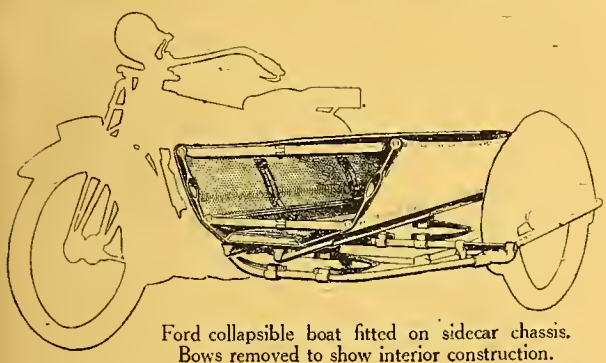
THREE SIMPLE CYCLE CARS. (Top.) A monocar with four tracks. (Left.) A Midland production—the Foster. (Right.) The Tondeur, which has variable pulley gearing.



A representative big single for sidecar work. Observe that no engine plates are used—the crank case forming part of the frame. The cylinder has been redesigned for 1922.

THE 4-H.P. BRADBURY.

THOSE dismal prophets who foresee the ultimate doom of the sidecar through the development of the cycle car always overlook the fact that, at whatever cost a small four-wheeler can be produced, a sidecar outfit giving an equal road performance can be manufactured and marketed at a lower price. Whatever the ultimate fate of the high-powered elaborately equipped outfit, the economical single-cylinder machine will always hold its own among passenger machines. The 4 h.p. Bradbury is an excellent example of this popular type, represented by so many makers, and, in its latest form, is bound to attract the attention of the sidecarist who requires a robust machine—and a sturdily built mount is necessary in certain parts of the country where the roads are not so good as they should be.



Ford collapsible boat fitted on sidecar chassis. Bows removed to show interior construction.

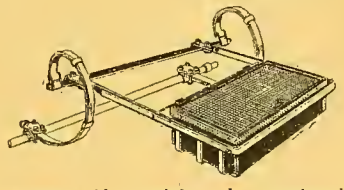
Single-cylinder Bradburys are distinctive at least in one exclusive feature, the crank case forms part of the frame itself. In other words, it has no engine plates, and the engines in old pre-war machines of this make are just as rigid in their frames as those in new mounts.

◈ ◈ ◈ ◈

CONSIDERING we are supposed to be a maritime nation, comparatively few of us get acquainted with the water other than by an occasional half-day in a hired skiff. There is a good reason for this, of course, for the British youth is never slow to take up any healthy outdoor pastime, as witness the popularity of the motor cycle. Few of us have facilities for boating, but where one is within a few miles of free water the idea patented by Mr. A. E. Ford, the manufacturer of Ford folding boats, is worthy of consideration. Here we have a sidecar which can be converted conveniently into a motor boat by placing the motor bicycle inside the collapsible body or hull. Those who have vetoed all suggestions for a sidecar T.T. may allow a boat race over a triangular course in the Solent. Such an event should be worth witnessing if such sidecar experts as J. A. Masters, Hugh Gibson, and Reg. Brown were at the helms.

◈ ◈ ◈ ◈

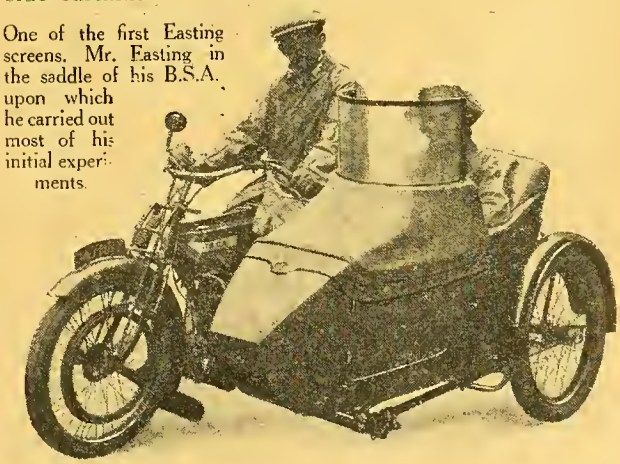
QUITE a useful sidecar luggage carrier for fixing to the cross-bar of the rear body springs is sold for a guinea by James Grose, Ltd., 4, Old Jewry, London, E C.2. As will be seen from the illustration, it embodies a useful box with an aluminium-covered top which is provided with a suitable hasp for a padlock.



Luggage grid containing a box marketed by James Grose, Ltd.

◈ ◈ ◈ ◈

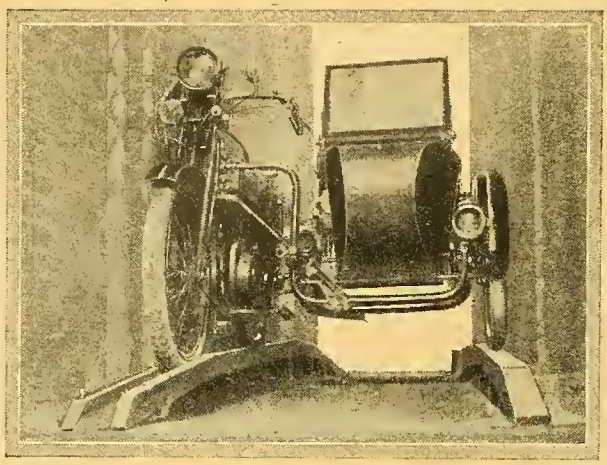
MANY motor cyclists who use the Easting wind screen have remarked that it is so simple that it is a wonder that no one thought of it before. Like Phil May's sketches, this is an excellent example of the fact that the simplest things are usually the outcome of a great deal of work. When it was first brought to *The Motor Cycle* Office by Mr. Easting, the now famous screen was quite an elaborate affair; in fact, the designer aimed to convert all open sidecars into coupés. The illustration on this page depicts one of the earliest Easting screens, which, it will be seen, embodies the present-day idea, but is of another type intended to be used in conjunction with a hood and side curtains.



One of the first Easting screens. Mr. Easting in the saddle of his B.S.A. upon which he carried out most of his initial experiments.

**Passenger Machine Topics.—**

IN many large cities—London particularly—the difficulty of storage is very acute, and the problem of garaging has to be tackled from various angles. A Mr. Starbuck, of Lee, S.E.12, found that he could



The difficulties of a narrow entry overcome by run ways.

get his Brough outfit through a narrow entry but for the several steps in the way. He surmounted the trouble by building runways in the form of troughs, as shown in the illustration on this page. No doubt there are many readers who, by utilising this method, may save the weekly bill for storage in the public garage "round the corner."

DURING the recent rains we have had a further opportunity of testing Erusa, the belt-slip preventive. We are satisfied that we have at long last found a preparation which will not only prevent belt slipping in wet weather, but does not call for application every day. The makers are Thomas & Bishop, Ltd., 37, Tabernacle Street, E.C.2.

ALL motor cyclists are aware that a new saddle is not ideal for long-distance touring, and some hundreds of miles have to be covered before full comfort is attained. This stricture, however, does not obtain with the Jelley flexible top saddle. There is no metallic frame to this admirable device, and the seat is constructed largely of moulded rubber, which "gives" to the required shape and is wonderfully soft and comfortable. This is not the only advantage, for rain does not soak into the fabric, and, if the machine has been left out in a storm, it is only necessary to give the saddle a wipe over in order to obtain a perfectly dry seat. As a proof of our esteem for the Jelley saddle, we may add that we refused to part with ours when selling our last year's machine, and the same saddle has now been in use for 5,000 miles on its second mount. This saddle is now marketed by Alfred Roberts, Ltd., Birmingham.

# NORTH-EASTERN A.A. AFFAIRS.

## The Relationship of Northumbrian Clubs with the Auto Cycle Union.

ARISING out of a meeting of the Northern clubs held in the Y.M.C.A., Sunderland, on January 12th, with the object of forming a North-Eastern Centre of the A.C.U., we have received the following letter from Mr. J. E. Hodgkin, honorary secretary of the North-Eastern Automobile Association:—

"For several years past the North-Eastern Automobile Association, which has had affiliated with it practically all the motor clubs, both car and motor cycle, in Northumberland and Durham, has maintained as part of its organisation a motor cycle section, which was, at the same time, by agreement, the Northern Centre of the A.C.U. When the R.A.C., for reasons which do not enter into this question, determined the Association agreement with the N.E.A.A. at the end of 1920, the above-mentioned arrangements for the motor cycle side of the N.E.A.A. were not interfered with and the motor cycle section functioned quite normally during the whole of 1921. Two successful competitions were held, and no question was ever raised at the general committee of a desire to break up the existing arrangement as an A.C.U. centre.

"Towards the end of 1921 a general meeting of members of the N.E.A.A. was called to consider its position and prospects, the committee's recommendation being that it should be carried on and that any idea of again associating with the R.A.C. should be dropped. At this meeting a large number of affiliated members were present, and by their vote carried a resolution to wind up the N.E.A.A. When it subsequently transpired that the club to which these gentlemen belonged had not paid its affiliation fees for 1921 the N.E.A.A. general committee ruled the meeting 'out of order' and disregarded the resolution. This action will be brought forward for confirmation at the N.E.A.A. general meeting in February.

"The committee's action appears to have been greatly resented by the affiliated club in question, which has now taken the extraordinary step of summoning a meeting of Northern motoring organisations, though I notice that only two other clubs accepted their invitation. What surprises me is that Mr. Loughborough, as the secretary of the A.C.U., with whom the N.E.A.A. has had the friendliest relations ever since the A.C.U. was formed, should commit himself (as he is reported to have done) to the statement 'that the A.C.U. would consider that the N.E.A.A. had ceased to exist.' This is directly contrary to the facts; the Association was never more alive than it is at present. I cannot but wonder if Mr. Loughborough has been incorrectly reported. [This statement did not appear in *The Motor Cycle* report.—ED.]

"The N.E.A.A. general committee has always left to the motor cycle section the fullest freedom in organising sporting events as the Northern Centre of the A.C.U. The general committee has defrayed the expenses of the Motor Cycle Board, which have never been covered by the affiliation fees from motor cycle clubs, after the fees of the A.C.U. have been paid, and if such Northern clubs as the Newcastle and District have failed to make a success of their association with other similar bodies under the auspices of the N.E.A.A., what reasonable chance is there of their doing better under any newly constituted body which will not have behind it the financial and political support which the N.E.A.A. has always given?"

Touring in France: a halt at a wayside café.

## Information for all Motor Cyclists who contemplate a Tour on the Continent, and to Overseas readers who wish to bring their Machines into this Country.

WE have on several occasions given information to the motor cyclist who desires to tour on the Continent of Europe, but the average reader has no idea as to the formalities the visitor to England has to go through before he can use his machine in this country.

It is by no means an infrequent occurrence that one of our readers who lives overseas desires to bring his machine over to England with him on his leave, for there are quite a number of motor cyclists occupying posts in foreign countries who receive perhaps a six months' leave every second year; consequently we are often asked what formalities have to be gone through before a private machine can be landed in the home country. The same remarks apply to the Continental visitor who is anxious to tour in Great Britain.

### Bringing a Motor Cycle into England.

In the first place, the intending visitor should apply to the A.C.U., R.A.C., or A.A. & M.U. for a *triptique* (or Customs paper) and deposit 33⅓ per cent. of the value of the machine, the cost of insurance and the freight, with the institution to which he applies and of which he should be a member. If he writes in the first place in good time before landing, his papers will be all ready for him, and he will only have to apply at the port of arrival to the R.A.C. guide or A.A. scout, when he will be given special numbers, a licence-holder and licence for a fee of £1 7s. 6d., and the said guide or scout will also procure for him his driving licence, which will cost 5s.

Foreign visitors or others who enter the country under these conditions are granted numbers, of which the index letters are Q Q, and a special licence is issued at the same time. This is available for four months, and if the period is exceeded by even one day the visitor becomes liable for the local taxation licence dating from the time of his arrival in England. If the visitor is riding a machine of British manufacture he must provide the Customs authorities with proof of export, and the machine can then be brought into the country free of duty.

### Taking a Motor Cycle to the Continent.

Every year quite a number of motor cyclists enjoy a very pleasant and profitable change by taking their machines to the Continent. Moreover, during 1922 there will be several interesting Continental competitions, such as the Grand Prix near Strasbourg, the International Six-Days Trial in Switzerland, to say nothing of other minor events such as the Paris-Pyrenees Trial and the Tour de France.

The visitor to the Continent should become a member of one of the motoring organisations (the A.C.U., either through an affiliated club or as a direct member, or the A.A. & M.U.), which transact all business connected with the journey, such as obtaining passports, visas, and the International driving licence. Moreover, the money representing the duty may be deposited with them before starting, and will be returned provided the papers are in order when they come back to England.

The following information is up to date at the moment of writing, but may be modified shortly. Passports are necessary for all foreign countries; their cost is 10s., 7s. 6d. for the passport and 2s. 6d. messenger fee charged by the two organisations mentioned; the same charge is also made by Messrs. Thos. Cook & Son. No visa is necessary for France or Belgium; the cost of a visa, including messenger fee, for Italy is 12s. 6d., Holland 10s., Switzerland 12s. 6d., and Spain 7s. 4d. In France every motor cyclist has to pay a fee of 12 francs to the Customs on landing, which licenses the machine for one year. Motor bicycles may be introduced into France and Holland on presentation of the special Customs card issued by the A.C.U., or

**International Touring.—**

A.A. & M.U. Sidecar outfits are admitted free into Holland on presentation of the special customs card.

In France, when a sidecar is attached the accompanying scale will give the information required :—

| | General Tariff. | | Minimum Tariff. |
|---|---|---|---|
| | American makes. | Other makes. | British makes. |
| Motor cycles only ; per 100 kilos. net .. | 250 fr. | 330 fr. | 220 fr. |
| Sidecars only ; charges on body only, weighing less than 125 kilos. net .. .. .. | 150 fr. | 180 fr. | 120 fr. |

These rates are minimum; therefore any machine or sidecar not turning the scale up to the specified weight is chargeable exactly as above. Those exceeding are dutiable proportionately higher by the above basis. The charges for motor bicycles must also be multiplied by the co-efficient 1.3, while the charges for sidecars must be multiplied by the co-efficient 2.3.

**Other European Countries.**

| Country. | Types of Machines. | Duty. |
|---|---|---|
| Belgium. | Motor bicycles and motor cycles with sidecars .. | 20% ad valorem. |
| Norway. | Motor bicycles and motor cycles with sidecars .. | 15% ad valorem. |
| Sweden. | Motor bicycles and motor cycles with sidecars .. | 15% ad valorem. |
| Spain. | Motor bicycles .. .. | 1s. 2d. per lb. |
| | Motor cycles with sidecars .. .. .. | £1 19s. per cwt. |
| Italy. | Motor bicycles .. .. | £12, plus 1% ad valorem. |
| | Motor cycles with sidecars .. .. .. | £14, plus 2% ad valorem. |
| Switzerland. | Motor bicycles and motor cycles with sidecars .. | £3 per cwt. |

**Passengers' Fares.**

| Railway. | Route. | First Class. Single. | First Class. Return. |
|---|---|---|---|
| | | £ s. d. | £ s. d. |
| G.E.R. .. | Harwich to the Hook | 2 0 0 | — |
| | Harwich to Antwerp | 2 0 0 | — |
| S.E. & C.R. .. | Dover to Ostend .. | 14 3 | 1 8 5 |
| | Dover to Calais .. | 18 0 | 1 16 0 |
| | Folkestone to Boulogne .. .. | 16 0 | 1 12 0 |
| L.B. & S.C.R.. | Newhaven to Dieppe | 1 15 6 | 3 7 10 |
| L. & S.W.R. | Southampton to Havre .. .. | 2 2 9 | 3 6 3 |
| | Southampton to St. Malo .. .. | 2 1 11 | 3 4 7 |
| | Southampton to The Channel Isles .. .. | 1 15 0 | 2 17 9 |

These rates are liable to slight variations owing to the fluctuations of the various exchanges.

**The Unattached Motor Cyclist.**

We are sometimes asked by readers how they can manage to take their machines on the Continent without belonging to one of the recognised motoring organisations, and the answer is that this is possible but highly inconvenient, and not to be recommended, the motor cyclist placing himself in much the same position as the man who tries to act as his own lawyer. The International Pass and the *triptique* are only issued by these organisations, and if the motor cyclist takes his machine, say, to France he would first of all have to inform the customs at the port of embarkation that he was temporarily exporting the machine from this country, and to obtain a licence from them to do so. He would then have to deposit money with the French customs authority in hard cash, and even here his troubles would not end, as he would have to register the machine in France and take out a French driving licence. On his return he would have to get the deposited money back from the French customs, and on his arrival in England he would immediately have to satisfy the English customs that the machine had only been exported temporarily. The desirability, therefore, of belonging to and making full use of membership of a motoring organisation is indisputable, for otherwise the traveller is liable to be involved in heavy expenses and vexatious delays.

**Charges for the Transport of Motor Cycles on the Principal Cross-Channel Routes**

| Railway. | Route. | Boat Departs. | Vehicles Alongside. | Motor Bicycles. Accompanied. | Motor Bicycles. Unaccompanied. | Motor Cycles and Sidecars. Accompanied. | Motor Cycles and Sidecars. Unaccompanied. |
|---|---|---|---|---|---|---|---|
| G.E.R. .. | Harwich to The Hook .. | 10.15 p.m. | 3 p.m. | £1 | £1 2 6 | £2* | £4* |

* Plus 5s. transmission fee.

# F.I.C.M. WEIGHT LIMITS.

IN a leading article in our issue for January 26th we drew attention to the fact that certain standard motor cycles competing in the Tourist Trophy races had to carry extra weight as ballast, in order to bring them up to the F.I.C.M. minimum limits. While such *minimum* weights remain in force it cannot be said that full encouragement is being given to designers of lightweights, and it seems a pity that they are handicapped by regulations framed to protect over-zealous riders on the Continent.

We also mentioned the fact that the F.I.C.M. cyclecar definition includes a *maximum* weight limit, and inferred that if it were justified in one class, it would seem more consistent to apply it to all classes.

We have now received this rejoinder from Mr. T. W. Loughborough, the General Secretary of the *Fédération Internationale des Clubs Motocyclistes* :—

"The leading article in your issue of the 26th January," Mr. Loughborough writes, "conveys the impression that the F.I.C.M. International Competition Rules are out of date, and that in particular the rule which lays down various weight limits is in need of revision.

"Neither of these conclusions appears to be justified when the facts are known, although I admit that in this country, owing to the fact that it may still claim to be the leader in the sport of motor cycling, the International Rules are not always in accord with our latest practice. The underlying object of these rules is to encourage progress along sound lines. British manufacturers have passed the stage during which such education is called for. No competitor would, for instance, think of racing at Brooklands on a machine so light that, unless steered clear of the famous bumps—now, I believe, all smoothed out—it would collapse. But at a Continental hill-climb such risks would be cheerfully taken if no minimum weight limits existed, and freak machines would appear as they did years ago to the great detriment of the sport and the pastime generally.

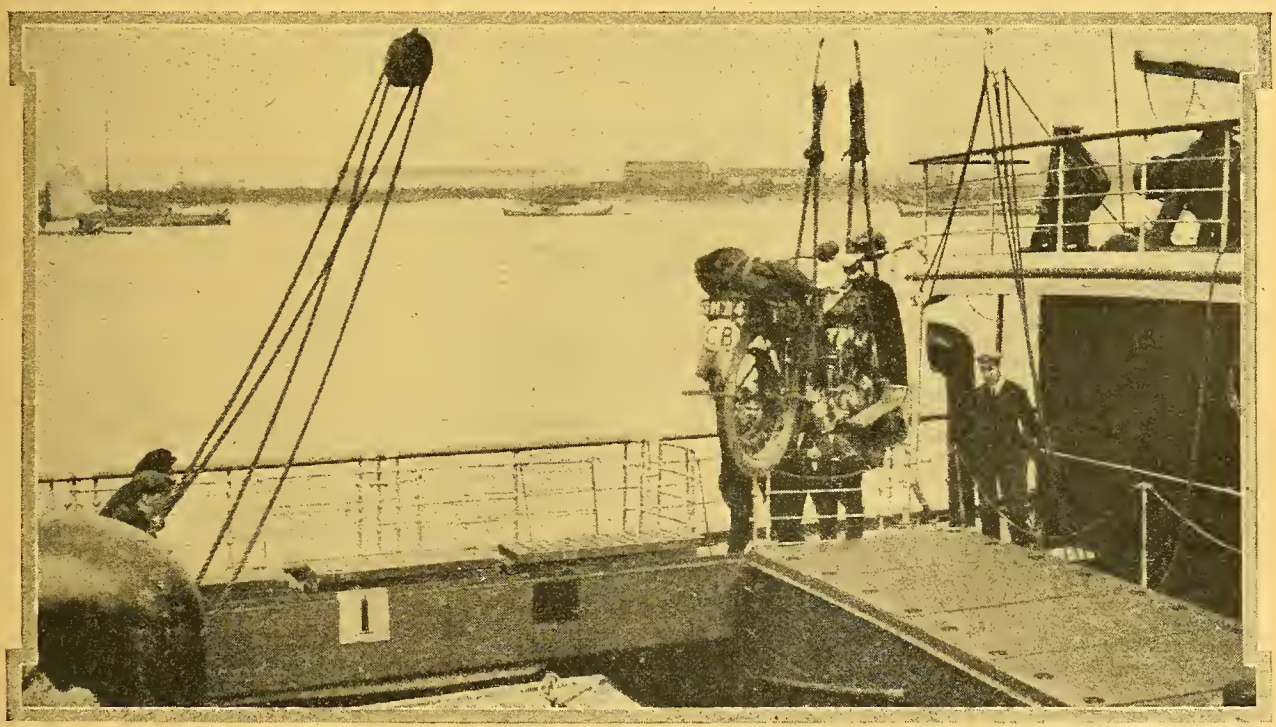
"On the other hand I do not think, as is inferred by the writer of your article, that even in this country the International weight limits are any handicap to those praiseworthy manufacturers who are trying by good design and the use of fine material to reduce weight.

"The following table shows that, after making a generous allowance for the weight of fuel, oil, etc., etc., in Cols. 3 and 4, there is still a large margin for improvement before the F.I.C.M. minimum weight limit is reached.

| Class. | F.I.C.M. min. wt. limit, not including fuel, oil, tools, etc. | Average wt. of m/cs. in Six Days, 1921, including fuel, oil, tools, etc. | Average wt. of m/cs. which finished in 1921 T.T., including fuel, oil, tools, etc. | |
|---|---|---|---|---|
| | lbs. | lbs. | lbs. | |
| A. (250 c.c.) .. | 132 | 213 | 192 | Solos. |
| B. (350 c.c.) .. | 165 | 226 | 225 | |
| C. (500 c.c.) .. | 187 | 302 | 253 | |
| D. (750 c.c.) .. | 220 | 328 | — | |
| E. (1,000 c.c.) .. | 264 | — | — | Side-cars. |
| F. (600 c.c.) .. | 275 | 391 | — | |
| G. (1,000 c.c.) .. | 352 | 600 | — | |
| H. (1,100 c.c.) .. | 550 | 910 | — | Cycle-cars. |

"The International Competition Rules are frequently revised, and, by the time actual weights have more closely approached the minima, these will doubtless be reduced.

"Finally, I would remark in answer to the last paragraph of the article that there is a minimum as well as a maximum weight for cycle cars."

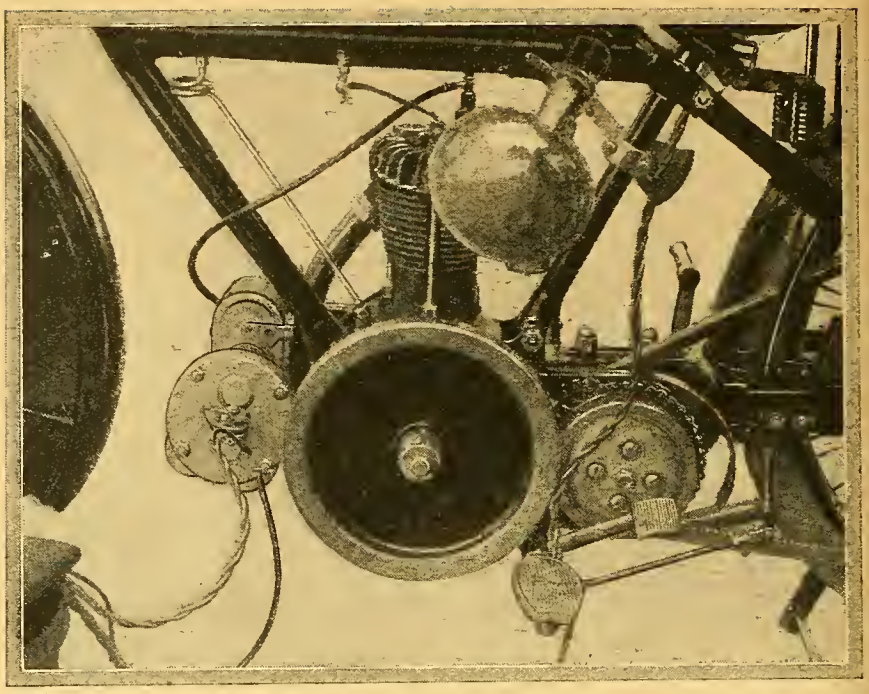


DISEMBARKING AT ANTWERP. Solo machines are usually taken ashore by means of cranes; sidecars, too, are sometimes subjected to this method of handling, but obviously the best way is to support the outfit on a base instead of attaching the ropes directly to the machine.

# VALVE BOUNCE MADE VISIBLE.

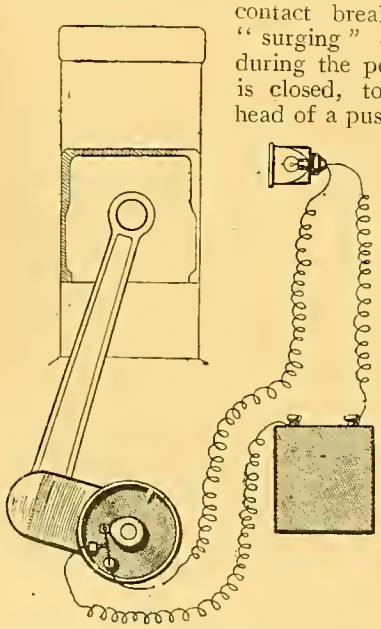
## The Oscilloscope — an Epoch-making Invention.

WE have already made mention of Mr Elverson's oscilloscope in the pages of *The Motor Cycle*, but a practical demonstration of some of its many applications induces us to record for the public benefit some of the possibilities which lie before this invention in conjunction with research work.



The magneto contact breaker provides a convenient drive for the oscilloscope, which is shown complete with, hand lamp and ready for action. Darkness is, of course, an essential condition.

At the outset it may be stated that at various times we have been able, by the aid of the oscilloscope, to count and measure the bounces of a valve (between the lifts) in an engine running at high speeds, to examine the "break" and "flutter" of a magneto contact breaker, to watch the "surging" of a valve spring during the period that the valve is closed, to examine the ball head of a push rod taking its seat in a valve rocker, and to watch the vibrations of a single cylinder engine in a motor cycle frame reduced in speed to such an extent that it would have been possible to measure their frequency and magnitude.

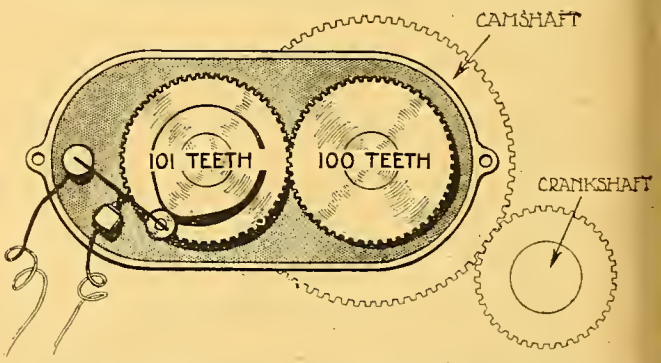


When it is desired to examine a moving part at one particular point in its movement, the switch-cam is simply geared direct, as shown.

These instances serve to illustrate the adaptability of the device to everyday occurrences, but they form the merest fraction of the possible applications of this ingenious instrument. The operations of any high speed machinery can be slowed down by means of the oscilloscope to a speed at which they can be optically examined, and it is even possible to examine any stage of operation under stationary conditions. To designers and others interested in research work the value of such an instrument is almost unbounded, and its advantages have been quickly realised by those who have been able to watch it in operation.

### Action of the Oscilloscope.

The action of the apparatus may best be described as an optical gear ratio having, normally, a value of 1%, though this percentage may be varied in special circumstances. In explanation it may be said that the gearing of the instrument is driven from a given shaft of the mechanism under inspection, and this mechanism is then illuminated by intermittent flashes



Since the cam-wheel actuating the oscilloscope switch runs, in this case, at 1% of the speed of the engine camshaft, the light only occurs each $\frac{99}{100}$ of a revolution; thus the moving point of the valve gear under examination is momentarily illumined in 99 consecutive positions each hundred complete cycles—each flash being fractionally later than the previous one. In effect this shows, to the observer's eye, one complete slow movement.

**Valve Bounce made Visible.—**

from a special form of electric light. With the apparatus in its normal form the mechanism under examination (in a subdued light) will appear to be operating normally, but at $\frac{1}{100}$ of its actual speed. Thus any part can be scrutinised under working conditions, and many phenomena hitherto only dimly suspected are clearly seen by the observer.

### Arrested Motion

If under examination any stage in the operation of a valve, or other part, appears to be faulty, a second phase of the oscilloscope can be brought into action merely by actuating a two way switch. This simple action causes the part to appear stationary at the position it had reached when the switch was thrown over, and in this way it is possible to make a thorough examination of each stage in the action of any part, and even to take measurements.

One of the most useful and interesting features of the oscilloscope is that by its means it is possible to determine without calculation the periodicity of vibrations in relation to a given shaft and to decide whether the vibration is in any way connected with the rotation of that shaft.

Experiments are now in progress for the detection of mechanical noises, by aid of the oscilloscope, by substituting a microphone with telephonic attachment for the flashing lamp used when visible results are required. Similar results can be obtained with this attachment, which can be rendered deaf to extraneous noises. The noise under examination can be stretched out, as it were, in duration, and its origin can be determined both in locality and in angular relation to a given shaft. Thus these experiments lead us to hope that it will be possible to locate a knock with exactitude and to determine exactly when it occurs.

### Simplicity of Action

As is often the case with inventions of importance, the mechanism is employed in the construction of the oscilloscope is simple and exact in action. The results obtained can be relied upon, and there can be few who will not appreciate the advantages of clear optical or audible solutions to mechanical troubles instead of complicated mathematical solutions.

The oscilloscope is handled by the Oscilloscope Syndicate, Ltd., c/o Herbert Kennedy & Co., 70, Fenchurch Street, London, E.C.3.

---

# DO WE EXPECT TOO MUCH?

## The Sidecar Blamed for Alleged Over-development of the Solo Mount.

IN spite of recent reductions in motor cycle prices, there still seems to be a good deal of envious talk about the price of motor cycles in the good old days before the war. But do we not, as motor cyclists, expect too much?

In the old days a motor cycle was a motor bicycle, used for just such journeys as would ordinarily have been ridden on a bicycle, except for the added advantage that you had a much wider radius at your disposal. Then some genius thought of the sidecar; the motor cycle for one became the outfit for two, and the modern craze for luxury began.

Since then, it seems, motor cyclists have changed their tastes. Nowadays the genuine motor cyclist is dying out.

### Evolution by Popular Demand

Motor manufacturers are human, and, seeing the trend of public demand, they have been obliged to cater for this new class of motor cyclists. For so many of the "improvements" which are yearly announced at the Show are merely accessories which are taken for granted in the modern light car. The three-speed gear box was amongst the first. Rendered necessary by the sidecar, it has, like the sidecar, come to stay. Then the extra weight of the sidecar, together with the gear box, made a more powerful engine a necessity, considerably increasing the first cost of the outfit as well as increasing the running expenses.

Then the more powerful engine required a more robust motor cycle frame, which meant—still more expense. So it will easily be seen that the three-speed gear box, together with the clutch, kick-starter, the electric lighting set, spare wheel, the luxurious sidecar (to quote the catalogue term), hood, and windscreen account in a most decided manner for the present high cost of our machines, yet, when all is said and done, the motor cycle is still only a motor cycle.

### Not Confined to Big Machines.

Even the lightweights seem to be suffering from this complaint. The number of small two-strokes to be seen manfully tugging at a "sporting" coach-built sidecar is enormous, and, although these sturdy little engines will stand pulling two-up for a long while, there really ought to be a law passed making it a penal offence to so maltreat innocents in this way.

Motor cyclists must be the most generous race on earth. Anyone counting the number of sidecar outfits on the road, knowing, as a motor cyclist does, their difference in price compared with purely solo mounts (nearly double in most cases), *and* considering the fact that they have generally to be put to bed at the local garage, will believe this.

But from now on, however, if motor cyclists wish the high cost of motor cycling to come down, they must be *firm*.

They must return to the Spartan simplicity of their forefathers, and stoutly resist the appeal of "twa sweet 'een of bonnie blue," and inform the owner of them that she knows nothing whatever about motor cycles (I am sure that this modern craze for luxury is really feminine in its roots), and that if she wants to motor cycle she must jolly well ride one herself.

Then, and not till then, will the cost of motor cycles come down to pre-war level, and then perhaps I shall be able to afford that khaki monster which Estelle has determined will be just the thing to take us on our honeymoon.

V.H.

# IDEAS: USEFUL AND INGENIOUS

## A Selection of our Readers' Home-made Gadgets, with some Practical Hints on Work in the Garage.

### On Soldering.

SOLDERING is one of those easy jobs which even more than ordinarily intelligent people can absolutely muddle through a little bit of carelessness.

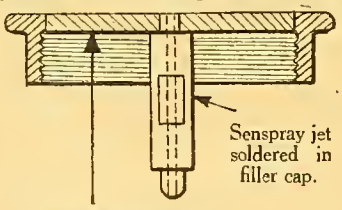
Cleanliness is a first essential. As a rule, motor cyclists' soldering jobs are confined to control wire nipples, pipe unions, and the occasional construction or repair of some accessory in sheet brass or tin. All parts to be soldered must be scraped or filed bright before they can be joined—grease or oil on the work is fatal. The soldering iron must also be quite clean and well tinned. To "tin," bring the iron to a good heat, file bright quickly, dip in the flux, and rub with a stick of solder until the surfaces are brightly coated; occasionally dipping in flux will keep the iron bright. Don't expect the best results if you warm the iron in a flaming coal fire or a smoky blow-lamp flame.

The function of the flux is to dissolve the oxides created on the surface of the heated metal. "Killed spirits" used by tinsmiths are too troublesome for occasional amateur use; buy a ready-made flux such as Fluxite, Chemico Soldering Paste, or Baker's Soldering Fluid. Paste fluxes are apt to be "messy" in working and require some skill in use; liquid fluxes are very "clean" to work, but must be washed off the finished job if corrosion is to be avoided. Paste fluxes for Bowden wire work every time!

Very handy for unions and nipples are the prepared paste and wire solders which combine a flux. Tinol paste, for example, will fuse with the heat of a match (although the smoky flame must *not* be played on the actual surfaces to be joined). This preparation is admirable for small electrical joints. D.H.S.

### Anti Splash Filler Cap.

HERE is a little job on which some of the above soldering hints may not come amiss. Mr. D. Pierrepont has trouble with petrol leakages from a glass-topped filler cap. Being a masterful man,

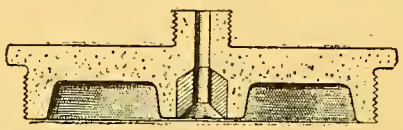


A non-splash filler cap air vent.

with an address in Lancashire, he promptly knocked the glass out, substituted a metal disc, and in the centre drilled a hole to receive the screwed end of a Senspray jet. (As a matter of fact, not having the correct tap handy, he filed off the threads and soldered the jet in.) As Mr. Pierrepont says, the device prevents any petrol from splashing over whilst riding; but what will the inventor of glass-topped filler caps think about it?

### Top Feed Float Chambers and Flooding.

NO doubt many riders have been troubled with mysterious carburetter flooding, yet have been unable to discover any cause of derangement on dismantling their carburetter. How this flooding may be caused, and a method of curing it, in the case of top feed float chambers, is submitted by a Birmingham rider of a B.S.A., Mr. C. Gavin, who has spread an ownership of five different machines over the last seventeen years. Mr. Gavin discovered that, after the machine had been standing two or three days, it invariably flooded when the petrol was turned on. No ordinary adjustments effecting a cure, it was concluded that the trouble lay in the float needle falling too low when the float sank to the bottom of the empty chamber, and, consequently, slipped sideways into the ⅛in. recess below the needle valve seating, where it then jammed. A bush having a slightly larger hole than the petrol orifice was pressed into the recess of the float chamber cover and the trouble ended. It might be suggested, of course, that alternative cures for this trouble would be a longer needle which could not drop so far away from its seating, or a thick washer or nut in the base of the float chamber, which would limit the downward movement of the float, with the same effect.

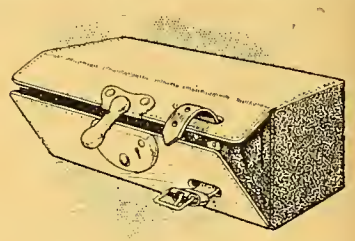


Guide bush for needle in float chamber cap of B.S.A. carburetter.

*Hints, Tips and Descriptions of Home-made Fitments are invited for inclusion on this page. Rough sketches and brief notes only are needed, and payment will be made for all matter used. Letters should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and should be marked "Ideas."*

### A Wise Precaution.

MR. J. STUART WHITE is a north country motor cyclist who infuses a spirit of native caution into his hobby. He does not believe in the soundness of toolbag locks, apparently, and doctors his panniers as shown in the sketch; suitable short straps are sold at cycle shops as inflator clips. Not at all a bad scheme, and a twopenny strap may save a fifteen shilling tool kit.



A tip for ensuring the safety of the tool kit.

### A Tip for Amac Users.

A FRAGMENT of sound sense is here culled from a letter veiled in anonymity. "The main jet of an Amac carburetter screws inside another chamber having five or more smaller holes (vaporising jets). As main jets may vary in height above the threaded portion, it is essential to see that they do not come in contact with the spraying jet platform. A pencil passed up to the top of the inner chamber and marked at the jet plug shoulder will allow one to test whether the jet is clear. Polished concentric rings round the jet orifice are a sure sign that it is touching."

### An Acetylene Gas Purifier.

ADDED efficiency from acetylene lamps is gained by the use of a gas purifier constructed as shown in the drawing. It consists of a tube, 1in. in diameter, containing a mixture of bleaching powder and quicklime (calcium oxide), held together by two wire gauze discs. The end pieces are simply corks with brass tubing inserted.—E.W.

An easily-made acetylene gas purifier, which greatly improves lighting efficiency.

The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.

### *PERFORMANCES OF A PRE-WAR SIDECAR.*

Sir,—"Normac" is evidently the gentleman responsible for the report of a fish taken out of Lake Windermere, who, being unable to have it weighed, gave an idea of its size by saying that the level of the Lake was lowered by one foot when he took it out of the water. J. MILNER.

Sir,—On reading "Normac's" letter of praise for "Top-hole's," and incidentally his own machine, I would like to give my experience on a 7-9 h.p. Indian, which is not slow by any means. My "colossal" record was 10.2 miles in seventeen minutes riding solo, early in the morning, with a reasonably clear road.

This is, as you see, 36 m.p.h. solo for ten miles, not 40 m.p.h. sidecar (carrying 23 st.), as "Normac" claims for seventy-four miles.

I should be very pleased to know "Normac's" top speed, as my speed needle was quivering at 55 to 60 m.p.h. at times, and well I knew it. BIG BUS.

London, N.W.10.

Sir,—Have I read "Normac" right when he states that he does the journey from Bolton to Ambleside with a 3½ h.p. 1911 Triumph coachbuilt sidecar (weight of passengers 23 stone) in one hour fifty minutes—a distance of 74 miles? If so, his Triumph must be some 'bus, or buzz! I know the road well and frequently make the trip myself on a heftier machine than a 3½ h.p. Triumph. I also go several times during the summer to Barrow-in-Furness, about fourteen miles further than Ambleside. But I always consider it good travelling if I do Barrow in four hours.

Bolton. J. W.

Sir,—I take my hat off and pay humble homage to "Quite Satisfied." His performance runs away with Messrs. Huntley and Palmer's factory. After that I'll believe anything—even "Normac's" claim of an average speed of 40 m.p.h. and a consumption of 134.5 m.p.g., with two up.

But I beg of this super-tuner never to tell his secret. If he does, my whole-hearted sympathy extends to investors. If his secret reaches the ears of the few thousand motorists in the world, what will happen to the shares of the big oil producers? MUTT.

New Malden.

Sir,—Referring to the claims made by "Normac" regarding his racing with a 1911 3½ h.p. Triumph sidecar, would this speedman care to meet us any week-end at Preston and see if he can ride from there to Ambleside in one hour and fifty minutes, let alone from Bolton, which will be another fifteen to twenty miles further?

G. H. MAYOR.

### *LUMINOUS SPEEDOMETER DIALS.*

Sir,—May I inform Mr. A. O. Russell, that a luminous speedometer can be distinctly seen, when night riding, with the lamps full on. It may make a small difference having electric lights, as the bicycle I have ridden had only acetylene lamps VIZ.

Essex.

### *DROPPED BARS FOR CONTROLLABILITY.*

Sir,—I have often been puzzled by the number of people who ride motor cycles with touring, or "Sit up and beg" type handle-bars. T.T. or semi-T.T. bars are far more comfortable and give one better control over the machine. Of course, there may be a reason. If so, would someone kindly enlighten me? MARTINIVY.

I.O.M.

### *SMOOTH RUNNING OF A SPORTS SINGLE.*

Sir,—"Ixion's" writings have always appealed to me, and, although Truth has often been garbed in the motley of jest, it has been, nevertheless, persistently present. Alas! when he penned his article entitled "What I Rode in 1921," he turned aside from the paths of veracity in a manner both distressful and unworthy of one so admirable.

He avers that the Sports Sunbeam was a little inclined to be coarse at full throttle. It is this totally unjustified accusation which calls forth immediate and emphatic denials. Last year I owned two of the 'buses he mentioned, one of which was the Sports Sunbeam, and for sweet running at full throttle occasions, such as hillclimbs, the Sunbeam engine is conspicuously ahead of any one of many machines (including one specifically mentioned by "Ixion" for smooth running) that I have owned.

I can only suggest that the proverbial pressman's neglect resulted in his "'Beam" not giving him the best that was in her.

As for one of the other machines he writes of, I challenge him to fully open the throttle when in low gear, and succeed in keeping his feet on the footrests, so like a perambulating earthquake is this machine at "speed." JOVE.

Bromley, Kent.

### *ASSEMBLED MACHINES.*

Sir,—Let me state my personal views on the subject of "Assembled Machines." If I am unable to obtain a high-class special design, I much prefer the machine embodying high-class components, than the low-grade machine of special design, made by a little-known small firm. For, as is obvious, the manufacturers of such components, naturally, have better facilities than has the small maker, though it may be said that a gear box and engine does not make a machine.

However, in service after purchase, the "special design" has it all the way SPECIAL DESIGN.

London, S.W.19.

Sir,—"Ixion" may be trusted to speak for himself, but perhaps it may not be out of place to suggest to the famous firm who "set about" him recently that they have been patronising, since 1914, a firm making gear boxes for the assembling trade; also, that even in 1922, not to mention engines, they are fitting an assembler's spring fork—I might almost say the fork that has enabled assemblers to live since 1907, produced by "men of brains who give their whole power and being to the continuous improvement of the article which they design and manufacture." Usual disclaimer.

Leeds. RUFF RHODES.

### COMPARATIVE COMPRESSION RATIOS.

Sir,—May I join "E. F. G." in his proposal for a discussion on "Compression Ratios"? To put it mildly, I was flabbergasted by "Harmony's" statement that the compression ratio of his machine was 5.9 to 1. I have heard of a number of motor car engines (water-cooled) having compression ratios of between 5½ and 7 to 1, but not production models of air-cooled single-cylinder engines. I am quite aware that special engines for short sprints stand up to a very high compression, but there is a limit for roadster work surely. ESPOIR.

Leigh-on-Sea.

### THE WORLD'S BEST ROADS.

Sir,—Under the above heading in your current issue, I see that two correspondents, Mr. C. W. Beale and "Pothole" are inclined to ridicule Mr. H. Beacon's statement that during four months' riding he never saw a bad road or hit a single pothole. As an example of bad roads, Mr. C. W. Beale cites Essex, while "Pothole" mentions, among other places, Barnet.

For some years I have lived at Barnet, and during last summer I went to Clacton-on-Sea, *via* Waltham Cross, four times. With the exception of the first few miles, the whole of these journeys were made on Essex roads, which I found very good indeed. I must admit that the tramline portion of the road from Barnet to Finchley is in a disgusting state. In one place the tramlines are quite 3in. above the rest of the road. But this road is O.K. if one keeps to the side.

From the foregoing statements do not think that I am a spring frame merchant, for, as a matter of fact, my 'bus is a well-known 4 h.p. single with indifferent spring forks.

If Mr. C. W. Beale and "Pothole" are fed up with English roads, I suggest that they go to France for a spell. Why, the Rue de la Paix, the best known and most visited street in the world is like a miniature "No Man's Land."

English roads for me every time for speed on a 4 h.p. single, which is, in my opinion, the best test to find out what sort of surface a road has. HANDLEBARS.

Friern Lane.

Sir,—Mr. Beale's letter (if I read his meaning aright) confirms my opinion that English motorists do not realise what a bad road is; he is an extremely fortunate gentleman to have the use of those in Essex. I know that country, also the Staines and Egham district, particularly the latter, very well. Most of these roads deserve the title of "world's best."

Mr. Gibson's letter re Amateur T.T. races strikes the right note, although I think it would be a pity to relieve the A.C.U. of the trouble of organising these events.

Undoubtedly the enthusiastic motor-cyclist (however little in the know) is sick of the way everybody is bamboozled with special machines, shamateurs, and the usual trade method of racing something called the "same as you can buy," but which rarely is.

Enough of encouragement for the unbuyable, let us get down to results with private owner-drivers, and have amateur T.T.'s and an amateur records list.

H. BEACON.

### WHY THE REAR PLUG SOOTS UP.

Sir,—My twin gives me this trouble, but it cannot be due to the difference in length of the exhaust pipes as on my machine I have two short pipes leading into one large one, which gives exactly the same length of pipe from each cylinder. MC 5185.

Wallingford.

### REVERSING A TWO-STROKE ENGINE.

Sir,—Since fitting an M-L maglita to my 1921 touring model Scott, I find that when starting with the engine warm and the ignition lever anything beyond half advance, the engine will start running indifferently forward or backwards.

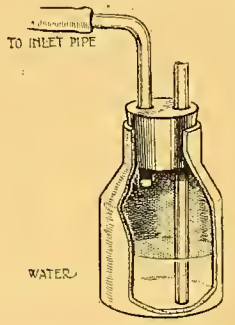
A slight change in the exhaust noise is the only apparent difference. There is no appreciable "kick" on the starter. The engine seems to have plenty of power, and will propel the cycle backwards, even up a stiff hill. I have more than once purposely run back some thirty yards, to the general surprise of all present. M.L.L.

Suffolk.

### YOUTHFUL INGENUITY.

Sir,—When at school I was enamoured of the idea of making a motor scooter from an Auto-Wheel auxiliary attachment. Mainly with this end in view, I induced my father to buy me a second-hand Wall Auto-Wheel, from which, in the interim, I got much pleasure, using it in the capacity intended by its makers. At length, however, a friend and myself collaborated in producing the atrocity, of which we are sanguine enough to hope you will reproduce a photograph in your valuable paper.

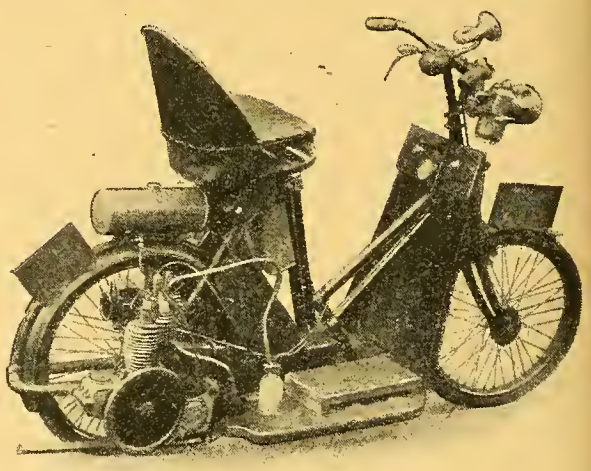
It will be observed (though not too readily, we hope) that the basis of the machine is the frame of a lady's bicycle of very ancient design. The back forks of this frame are secured to the horizontal members of the Auto-Wheel frame by U bolts, the angle and depth of the junction being controlled by wooden separators. The front wheel is of Auto-Wheel size (20in. × 1¾in.) and was obtained from the Cheltenham agents of the Auto-Wheel Co.



Humidifying the mixture by homely methods.

The footboard is supported by brackets, which my friend made from 1in. × 5/16in. iron. These brackets are merely clipped on to the frame and made fast by nuts and bolts, so that it will be seen that in no place has the frame been either brazed or drilled, for the front wheel fits into the original spindle holes.

Connected to the sparking plug is a home-made spark intensifier (extra spark gap), while on the footboard will be seen a humidifier, which is a device whereby the extra air for the engine can be drawn through water to saturate the air with aqueous vapour, and thus provide the mixture of petrol and air with a greater quantity of the catalytic agent necessary for its explosion. We gleaned this idea from an American periodical, *Science and Invention*, and the apparatus is arranged as in the sketch.



Quite a passably attractive miniature resulted from the conversion described in the accompanying letter from Mr. H. Hine, who, however, modestly calls it an atrocity.

In addition to the acetylene head lamp, a small electric lamp is fitted to the front of the dashboard, which carries on its obverse side a watch and an instrument lamp.

I am thinking (though with much reluctance) of scrapping the elaborate seat shown in favour of an orthodox saddle. This will enable me to lower the centre of gravity, which, at present, lies distressingly higher than the axle-to-axle line. HOWARD HINE.

### EXPERIENCES WITH PUNCTURE-SEALING TUBES.

Sir,—On page 400 of the last volume I find "Ixion" has found someone of a different opinion concerning these tubes. I beg to state my personal experience on a 3½ h.p. Humber Roc gear and sidecar.

A Challenger tube 26×2¼in. was fitted to the driving wheel, and was run 2,000 miles inside a Palmer cord cover, and was not touched until some spokes that broke required replacing. The cover was badly worn through to the canvas in places, which I found out was due to the sidecar wheel being out of line. Consequently, I made a very close examination of the tube, and was not surprised when I found many long thorns and flints embedded in the tube, which were extracted. The surprise came next, for on replacing the tube without any repair I pumped the tyre hard in the evening. On the following morning I certainly expected to find the tyre flabby; but not so: it has done another 1,000 miles in a new cover without another pump. This machine was subsequently sold and replaced by a 5-6 h.p. 1918 Clyno. This was also fitted with a Challenger tube, and has done 900 miles without attention. I must certainly give credit where it is due, and I consider it the best investment I ever made. "Ixion's" experience is just mine, and I could not let the other user's experience appear in print without making mine known, in fairness to the tube that has served me so well. Usual disclaimer. C. W. NICHOLS.

### SOLUTION-CARRYING SOLUTIONS.

Sir,—Your correspondent "BT 6807" complains of not being able to carry his rubber solution in a satisfactory manner. I should advise him to scrap his tool-bags on the carrier and get a tool-box on the top tube. Y. I.
Elland, Yorks.

Sir,—I have had a tube in use for this purpose about fifteen years, which has given every satisfaction. It is made of a short length of cycle frame tubing with a sheet iron bottom brazed in (probably soldering would do). The top is a screw cap and collar, such as plumbers fit to the bend under a kitchen sink. The collar is soldered into the steel tube, and the joint of the cap is made with a fibre washer. Short of being run over by a lorry, this tube is indestructible.
J. C. BENNETT MITCHELL.

Sir,—"BT 6807" might try one of the oil "bottles" issued, I believe, with army rifles, for his rubber solution. It is solid enough to stand any rough treatment, being of metal; the size is convenient, and the screw cap carries a wire ¼in. thick, which is convenient for spreading solution.
(Rev.) J. GRENVILLE BIGGS.

Sir,—Just lash the tube of solution on to any part of the frame with insulation tape. When required it can be easily cut off, and after use carried in the pocket until one arrives home. U 4968.
Leeds.

Sir,—Buy a Patchquick outfit, and one can rely on finding the solution in the tin when one wants it. NN 254.
Winchester.

Sir,—Obtain from a gasfitter about 5in. of ordinary lead gas pipe, and a threaded piece of brass gas tube 1in. long to fit inside one end of the lead pipe. A screw cap is also required to screw on to the brass tube. Solder the brass tube into one end of the lead pipe, put on the screw cap, and fill the tube with rubber solution through the open end. Then close the end of the tube with the pliers, fold over, and squeeze up tightly. It is too stiff to squeeze in the fingers, but the solution, if not too thick, will flow out. If too thick to flow, it can be forced out with the pliers. L. V. A.
Liverpool.

Sir,—If "BT 6807" will carry his repair outfit in a pouch on the handle-bars he will have no trouble with his solution, or French chalk, to say nothing of the saving of space in his tool-bag. REG. SAMSON.

[Correspondents from all over the country have come to the rescue of "BT 6807," who asked for a method of carrying rubber solution in safety. Above is a representative selection, the army "oil bottle" suggestion being repeated in another dozen letters.—ED.]

### BULBS FOR DRY-BATTERY LIGHTING.

Sir,—We can endorse "Ixion's" opinion of Siemens batteries, but our main object in writing is to point out that any cheap pocket-lamp bulb will not necessarily prove satisfactory, and, moreover, the normal candle-power of the 3.5 volt bulb is only about 1 c.p. Such a lamp is quite sufficient for the rear lamp, but the cheapest types may prove very expensive in current consumption in relation to light emitted. We have some 3.5 volt bulbs that consume 0.1 amp., yet they give more light than some of the Japanese bulbs consuming 0.5 amp. or more; these latter bulbs are worth wholesale about 12s. per 100.

We think it a pity that "Ixion" has described these small bulbs by letters that are not universally used in the trade. The correct name for them is M.E.S. ("Miniature Edison screw") and we would say that relatively high candle-power bulbs fitted with M.E.S. caps are usually unobtainable, and cost as much as the S.B.C. ("Small bayonet cap") lamps, which, by the way, are sold retail at 1s. 8d. for all normal voltage up to 12, except for candle-power greater than the voltages of the lamp, when the price is increased to 2s. 6d. Dimmer bulbs fitted with two filaments (as used on latest Fords) cost a little more, and are fitted as standard equipment to some cycles. J. J. EASTICK AND SONS.

### "BUYING FOR KEEPS."

Sir,—I was most interested in "Ixion's" remarks, and would like to carry the idea further.

In looking round the 1922 designs, I was disappointed to find it largely neglected by manufacturers—from the lordly specialist to the humblest assembler. If motor cycling is to be economical, the machine must be owner-repairable.

How many manufacturers fit a simple sturdy exhaust union? Many use small studs, some use peg wrenches—both slippery abominations. What is wrong with the large hexagon nut?

How many fit a decent adjuster for transmission tension? How many fit the gear lever on the box and avoid the extra adjustment?

How many of those who fit belt drive give it adequate protection? To my mind, lack of this is killing the belt, rather than freak hills and wet weather.

How many cut slots for a screwdriver in the wheel spindles?

How many fit the magneto where it does not act as a mud-catcher, and its drive as a shock absorber in the event of a side-slip?

How many fit lubricators of reasonable size and quality to hubs, spring forks and steering head?
Reading. HABITUAL GROUSER.

### VERY EXCLUSIVE AIR!

Sir,—May I warn those of your readers who are enthusiastic enough to regard a silencer as an unnecessary and power-wasting encumbrance not to allow the products of combustion from their engines to escape into the very exclusive air of that charming garden town of Cheltenham Spa?

Some while ago I was riding through that town a hot stuff 2¾ h.p. Douglas, with exhaust arrangements terminating in a pipe of rather sporting dimensions, when I was apprehended, and later relieved of 5s., in return for which an official ornamented my hitherto unblemished licence with divers hieroglyphic characters. HOWARD HINE.

### ENGLAND'S BEST SPEED-WAY.

Sir,—We are of opinion that the best piece of road between two towns for pure speed work is the stretch between Holyhead and Menai Bridge—twenty-two miles of fine wide road, with magnificent surface, little traffic, and no dangerous corners. We do not think that the United Kingdom can boast of many finer stretches of roadway than this one.
Malpas, Cheshire. MA 3087.
MA 6259.

### SPEEDS OF LIGHTWEIGHT TWO-STROKES.

Sir,—My machine is a Sparkbrook fitted with a 269 c.c. Villiers engine. I have obtained 47 m.p.h. along the Portsmouth Road, on the Guildford side of Ripley, to be exact, and have had 52 m.p.h. on Brooklands track while "coming off" the banking. These speeds are by a Cowey speedometer, which I can guarantee accurate at 35 m.p.h.

For Brooklands the machine was stripped, and the carburetter—a B.B.—specially tuned, but on the Portsmouth Road the machine was as I always ride it. W. M. COOPER.

### UTTERLY AMAZING SPEEDS.

Sir,—I have had the good fortune to pick up the humorously written and highly diverting 1922 American catalogue —"bulletin" it prefers to call itself—quoted by "Tomaso Dubitans" in his recent letter.

If, however, he had read on further, he would have learnt a tuning tip of value to him, that is, if he is a "speed fan."

May I give the extract for the benefit of those who have not seen the document in question?

". . . . the speedometer registered but 69 m.p.h. L——, however, was plainly disappointed and suggested that he try to get more, but after one go at it, he announced that the tyres were entirely too soft for high speeds, and he proceeded to spend about fifteen perspiring minutes getting the tyres up to pressure. . . . Here I took over the machine and started on the fastest ride of my life. . . . It was not until I sat up that I had an opportunity to read the speedometer, and although it was an 80 m.p.h. instrument, the maximum hand had been pushed a considerable distance beyond the last mark. When it is considered that this was done on a machine with the same equipment as delivered to the purchaser, wide mudguards, big tyres, etc. . . ."

Now that it has been thus firmly established that a machine's speed can be raised from 69 to well over 80 m.p.h. by the simple expedient of tyre inflation, it is time the Brooklands authorities laid down a power-driven air compressor plant for the use of would-be record breakers. It would be necessary, however, to fix a strictly enforced pressure limit if accidents are to be avoided, as, I understand, the Brooklands banking was only designed for speeds up to about 160 m.p.h. G. F. RANDALL.

### PRACTICAL THOUGHT MATERIALISATION.

Sir,—I beg to be allowed space for a few further remarks with reference to my assertion that anything we desire may be obtained by the power of creative, controlled, scientific thinking.

Your correspondents are highly amused; like most people, perhaps they think "thoughts" are airy nothings, a mere flash in the consciousness, coming and going just like light breezes on a summer's day. I beg to emphasise the fact that thought is the greatest power in the universe, and that every achievement of man, every single thing that has ever been built up in this world, has been created by thought power in the mind first. First the vision—then the accomplishment.

Your readers may be unaware of the nature and power of thought, since they appear to be confusing a clear definite image formed in the mind with a kind of juggling business or magical trickery (I understand they are not taking the matter seriously).

To think upon anything for one minute makes it a reality for one minute; to focus the powers of creative imagination upon one clearly defined mental image, to hold to this thought, to visualise it, with indomitable persistency and faith, with strong desire, is to see that image sooner or later take shape in the objective world aronnd us.

One word more—the writer has proved this; for a long time my desire has been towards motor cycling; within the last few months my desire has materialised. I, the merest infant with regard to any knowledge of motor cycles, am now driving a 4 h.p. Bradbury and sidecar; true the sidecar is a hired one, but this also—one of our very own—will come along in God's good time, which is the quickest possible time. (Mrs.) MAUDE STANSFELD.

Sir,—With interest I have followed up the above-mentioned topic, but differ widely from Mrs. Maude Stanfeld's and W. H. M. P.'s assertions.

Certainly, after concentrating the mind on a given factor, it generally materialises in dreams alone, and not the much-wanted and dreamt-of motor cycle. I remember quite well during a *dream* ordering a 3½ h.p. 'bus fitted with a special close ratio gear box and trying it all out on perfect dream roads doing a cool 70 m.p.h. After waking up I spent the rest of slumber hours in a sleepless night and a wakeful morning.

Cleveland, Yorks. CLEVELAND.

### MODERNISING THE LONDON-EDINBURGH RUN.

Sir,—With reference to this year's London-Edinburgh Run, cannot something be done to "even up" the chances. I would suggest that cars should not be entered, but any four-wheeled vehicle should be limited to 10 h.p. (terming them as cyclecars), sidecar machines to 8 h.p., and solos to 3½ h.p. It is quite unfair to class a 2½ h.p. two-stroke with a 5-6 h.p. twin solo. From an advertising point of view, I think "the Edinburgh" is far ahead of many of the more severe trials, which only kindle interest in the ardent enthusiast. As riders know, the Edinburgh not only creates great interest at Highgate, but in all the towns and villages passed *en route*. G. T. UDALL.

### T. T. RACES FOR PRIVATE OWNERS.

Sir,—With reference to the remarks in "Mudge's" letter that there are no sands situated centrally enough to be convenient for motor cyclists from all parts of the country, I should like to point out that the Southport beach is almost exactly half way between London and Edinburgh, and also readily accessible to the motor cyclists of Lancashire and Yorkshire, where the majority of sporting amateurs reside.

As to the absence of "road race flavour," I can assure "Mudge" that he will get all the excitement he desires should he care to compete in our 100-mile race.

H. F. BROCKBANK.

---

### SUMMARY OF CORRESPONDENCE.

Heath Super-oil sparking plugs are recommended by Mr. Chas. G. Huntley, A.M.I.E.E., etc., as being "impossible to oil up."

"A. B. C." complains of the conduct of the occupants of a two-seater Vauxhall car, which, on Sunday, the 5th inst., was seen careering to and fro on the Coventry-Birmingham road at speeds between 50 and 60 m.p.h., and with considerable disregard for the safety of other road users.

Recounting the experience of a customer who sent him a valve with the instructions to "make one to pattern, but a little larger"—not specifying in which dimension and by how much!—Mr. L. F. Bishop, a Bristol engineer, points out that repair work would be much expedited if fully detailed explanations of what is required always accompany the job.

Referring to the recent article on "Map Reading for Motor Cyclists," Mr. Frank L. Wimhurst recommends the *new* ¼in. to the mile edition of the Ordnance Survey maps (which, incidentally, are folded in an illustrated cover showing a motor cyclist studying a map) in preference to the bulkier ½in. sets.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 5/-. By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

# THE LONDON-LAND'S END TRIAL.

## Severity of Route to be Increased. Minimum Speeds for the Various Classes on Porlock.

SEVERAL innovations have been embodied in the regulations for the tenth London-Land's End trial. In the first place, the start will be at 10.30 p.m. on the evening of Friday, April 14th, from the Slough Transport Co.'s premises, close to the twenty-second milestone from London on the Bath Road.

The route will be as follows: Maidenhead, Reading, Newbury, Hungerford, Marlborough, Devizes, Trowbridge, Frome, Bridgwater, Porlock, Lynmouth, Lynton Hill, Holsworthy, Launceston, Bodmin, Truro, Penzance, St. Buryan, Land's End.

These references to the route camouflage several difficulties, and we can assure intending competitors that part of the trial will be over difficult country, which is interesting in view of the brief article in last week's issue entitled "Stiffening the Classic Runs."

### A Wise Condition.

Notwithstanding the fact that the present laws exempt motor bicycles from carrying red rear lamps, the M.C.C. insists that all competitors in the trials should carry these.

So far as awards are concerned, cups will be presented by various officers of the club for the best performances by motor bicycles, sidecar outfits, three-wheelers and cars, and of the three latter the Captain's cup, presented by Mr. W. H. Wells, will be for sidecars; the Elce cup, presented by Mr. W. H. Elce, for three-wheeled cycle cars; and the Pettytt cup, presented by Mr. G. Pettytt, for cars.

Gold medals will be awarded to competitors who comply with the regulations and who are not more than ten minutes early at any point on the journey, or more than five minutes late at the bottom of Porlock Hill, or slower than the following specified speeds for a measured mile beginning near the Ship Inn, Porlock: 18 miles an hour for motor bicycles above 350 c.c.; 15 miles an hour for motor bicycles not exceeding 350 c.c.; 15 miles an hour for sidecar outfits exceeding 500 c.c.; 15 miles an hour for cycle cars and cars exceeding 1,000 c.c.; 12 miles an hour for sidecar outfits not exceeding 500 c.c., and 12 miles an hour for cycle cars and light cars not exceeding 1,000 c.c. Competitors qualifying for gold medals must not be more than five minutes late at the top of Lynton Hill, and a second hill to be announced later, both of which must be ascended without a stop and with the entrant and passengers all normally seated. Competitors may not be more than ten minutes late at any other point. Silver medals will be awarded to competitors who comply with the regulations and are not more than ten minutes early or twenty minutes late at any point on the trial.

A cup for each class will be awarded to the competitor qualifying for a gold medal in his class whose speed for the one mile beginning near the Ship Inn, Porlock, is nearest to 20 m.p.h.

### Entry Fees.

Entries cost £2, including the entry fee of £1 14s. and deposit of 6s. on the number plates. These must reach the trials hon. secretary, F. T. Bidlake, 84, North End Road, Golders Green, London, N.W.11, on or before Saturday, March 25th.

The latest date on which members may join the club to be eligible to enter for this competition will be on Monday, March 13th. Anyone not a member of the club who wishes to compete should apply to the hon. secretary, Mr. Southcomb May, 34, Gower Place, London, W.C.1, for a membership application form. These applications for membership and the fees relating thereto should not be sent to the trials secretary, but entry forms for the trial may be sent by prospective members to Mr. F. T. Bidlake for acceptance pending election.

# THE MOTOR CYCLE MOVEMENT IN THE U.S.A.

## American Machines for the T.T. Racing Giving Place to Reliability Runs in the States.

"INDIANS hope to be in the T.T. this year." Such was the remark made to us by Mr. W. H. Wells, who has just returned from his annual visit to America. As regards competitions in the U.S.A., Mr. Wells indicated that there was a distinct tendency to drop racing and to concentrate on reliability trials, as the speed was getting too great for the American one mile dirt tracks. He informed us that C. B. Franklin was, nevertheless, getting busy with the T.T. machines, but he would have been far happier if the T.T. races had been held later in the year—in fact, Mr. Wells was most emphatically opposed to the holding of the races just before Whitsuntide, when the whole of his organisation should be devoting their attention to delivering machines to the public. He astonished us considerably by saying that the London-Edinburgh run was thought a great deal more of in America than the T.T. Races, for the reason that the T.T. was witnessed by a comparatively few enthusiasts, while the London-Edinburgh event takes the competitors through the whole length of England. It is, moreover, in the nature of a reliability trial in which purely standard machines are used. He also mentioned that the International Six Days Trial was being received with enthusiasm in America, and that every effort was being made to find a representative team.

### Lessons from the Public.

Reverting to the question of racing, he stated that the Hendee organisation seemed to be of the opinion that a great deal more could be learnt from the service department, where its staff came into actual touch with riders of standard machines, than from racing with experimental machines.

We asked Mr. Wells if motor cycles are becoming more popular in America. He told us that they were, especially in the Western States, but in the Eastern States there was too much motor traffic, and it was really difficult to get out of the Eastern towns during the week-end owing to the roads being so tremendously congested by cars. There are no by-roads to which the cars could be diverted, consequently, the speed of these cars was restricted to that of the slowest vehicle on the road, and there could be no passing, because there was an equally heavy stream of traffic coming in the opposite direction.

Asked as to the condition of the industry in the United States, Mr. Wells said that prospects were improving, and good business was being done in the South and West. The Hendee Manufacturing Co. were turning out 175 machines per week on direct orders—that is to say, they were only manufacturing machines for which orders had been received.

# "KEEP TO THE LEFT" PAVEMENT RULE.

THE Director-General of Roads, Ministry of Transport, has invited local authorities to consider the introduction of the "Keep to the left" rule for pedestrians, which, as recorded in *The Motor Cycle*, has already been adopted in Bristol.

According to *The Autocar*, Sir Robert Peacock, the Chief Constable of Manchester, upholds the "keep to the left" rule for the footpath in a commendable report recently issued, and, furthermore, regards cars with left-hand steering as dangerous because it is impossible for the driver of such a car to indicate to other road users when he intends to stop or turn. Sir Robert is also recommending the Ministry of Transport to make compulsory the use of a device to prevent mud-splashing, especially on heavy vehicles (it will be remembered that the Camberwell Borough Council carried out a series of trials of devices to combat the nuisance last spring). Dazzling head lights, too, are condemned by the Manchester Chief Constable, as also the bicycle minus a rear warning light.

# INEXPENSIVE ELECTRIC LIGHTING.

## Two Self-contained Sidecar Sets by Well-known Firms. Conversions from Acetylene to Electricity.

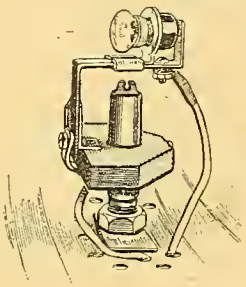
LIGHTING from a self-contained dry battery or accumulator is becoming increasingly popular, and for all but the hardest users of the heavier machines the system has much to commend it. There is also a distinct tendency for users of acetylene outfits to convert them to the electric type.

Wates Bros., 132, Charing Cross Road, London, W.C.2, are among the pioneers of the firms who supply the necessary components to effect the latter conversion, and a description of these and of the company's self-contained solo set appeared in *The Motor Cycle* of November 10th, 1921.

A sidecar set has now been introduced,

Extreme simplicity is a good feature of the Siemens dry battery lighting set for sidecars.

the accumulators being carried in the sidecar. The connection to the lamps is through substantial electric plugs attached to the side of the accumulator case. These cases contain three two-volt cells, so that a six-volt current is employed. The lamps are of the best possible quality and comprise a tail lamp, sidecar lamp, and head lamp. An adaptor is also supplied for converting an acetylene lamp. The accumulators supplied are made by the Hart Accumulator Co. and are capable of lighting the three lamps for about eight hours.



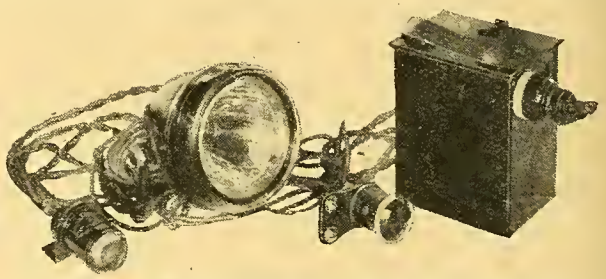
When the Siemens adaptor is swivelled into the position shown the light is automatically switched on.

### A Dry Battery Set.

Siemens Brothers and Co., Ltd., Caxton House, Westminster, London, S.W., have also devised a new lighting set including a head lamp and bracket of their own design, a side lamp, tail lamp, and dry batteries in a battery box, complete with switch and wiring.

This company has also introduced a system for converting acetylene lamps to electric for use for short runs, so as to obviate the necessity of continually cleaning and charging the acetylene generator. The fitting consists of an insulating base of ebonite on which is pivoted a movable arm carrying the lamp holder. The base is so constructed that it can be fitted over the burner and clamped to the stem by means of a grub screw.

When the movable arm is placed in the correct position the light is automatically switched on. The fitting has been so designed that when the lamp bulb is in the lighting position the filament is immediately above the gas burner, and consequently the source of light occupies the same position as the acetylene flame. The electric bulb faces towards the rearward side of the lamp, and thus all the illumination emitted from the front of the lamp is reflected light. It has been found that even when the acetylene burner is used no shadow or loss of light is caused by the electric fitting.



It is claimed that 8½ hours light for the three lamps is supplied by one charging of the Wates accumulator sidecar set.

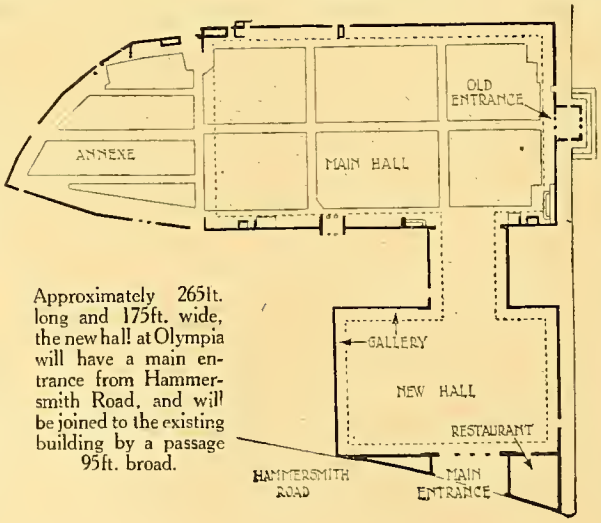
# THE NEW OLYMPIA.

## Particulars of the Additional Hall which is to be Erected. Plan of the Extension.

AS mentioned in last week's issue of *The Motor Cycle*, Olympia is to be enlarged. Building operations are to be commenced at the earliest possible moment. It is hoped that the new hall will be completed in time for the automobile exhibition this year, in order that once again that show may be housed under one roof.

From *The Autocar* plan herewith, which is approximately to scale, but at the same time merely of a diagrammatic nature, it will be seen that the new hall is to be erected between the existing Olympia and the Hammersmith Road, the site at present being occupied by house property, which has, of course, to be demolished ere building operations proper can be commenced.

Of rectangular form, the new hall will be approximately 265ft. long by 175ft. in width, and it will be connected to the existing building by a broad passage approximately 95ft. wide and 97ft. long. Opposite this passage, on the other side of the building, will be the main entrance from the Hammersmith Road, with a suitable restaurant and cloakroom buildings erected in the triangular space between the side of the new hall and the Hammersmith Road frontage.



Approximately 265ft. long and 175ft. wide, the new hall at Olympia will have a main entrance from Hammersmith Road, and will be joined to the existing building by a passage 95ft. broad.

Round the new hall will run a gallery, 30ft. wide, connecting up to the existing gallery of the main hall.

The effect of the new building will be to increase the capacity of Olympia by almost one-half, and the total floor space will, it is estimated, be increased from approximately 200,000 square feet to rather over 300,000 square feet.

Naturally, at this early stage the plans are by no means complete, and may be subjected to many alterations of detail; but the new building will be of much the same construction as the existing building, and will have a single span glass roof not quite so high as the roof of the existing building.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### ADVICE ON TUNING.

I have a machine with a 2¾ h.p. Blackburne engine, and a single lever Amac carburetter which I would like to tune up for speed. Could you kindly tell me the best way to set about it? Would you kindly tell me the most suitable jet, tappet clearances, valve and ignition timing, etc.?—J.M.

There is no royal road to tuning up a machine for speed, and it is quite impossible to tell you exactly what you must do. The whole thing is a matter for continual trial and experiment, but we would suggest as a help that you obtain such useful handbooks as "Motor Cycles and How to Manage Them," also "Hints and Tips for Motor Cyclists" from our publishers. The engine makers will advise you as to the best timing, and might be able to supply you with special cams, while the carburetter makers' booklet will also help. Having assimilated all the hints in these books, your tuning efforts will have to proceed experimentally, every modification being separately tested out.

### IMPROVING THE SILENCER SYSTEM.

It is desired to improve the silencing of an 8 h.p. Chater-Lea without causing any undue back pressure or uneasy running. I propose to do this by blocking up one end of the silencer box, which is perforated at ends, and fitting a pipe to the other end. Other things being equal, which will give me the best results: (1.) A large (say 2in.) or a small (say 1in.) pipe? (2.) A pipe with a fishtail, or one with the same diameter all its length, with or without saw cuts? (3.) If a fishtail, should it be flattened at the end or for about 18in. of its length, or be furnished with a box at end similar to a Zenith?—W.E.G.

If a large silencer is already fitted, it might be possible to fit a 1in. outlet pipe, but this size is rather small and might cause back pressure. Probably a 1⅛in. pipe would be better. (2.) This is really a matter for experiment, although saw cuts along the pipe would no doubt assist in quieting the sound of the exhaust. (3.) A flat outlet pipe is of no particular advantage, and is generally used in order to give clearance to the kick-starter crank, when the pipe passes close to the gear box, etc., rather than with any special regard to silencing efficiency. As a silencer is already fitted there is no need to fit another one at the end of the outlet pipe.

## Important Dates.

**Sat., Feb. 25th—Colmore Cup Trial.**
**Sat., Feb. 25th, to Sunday, Mar. 5th—Brussels Motor Cycle Show.**
**Sun., Mar. 5th—Argenteuil Hill-climb (France).**
**Mon., Mar. 6th—La Turbie Hill-climb (Nice).**
**Wed., Mar. 15th—A.C.U. One-day Trial for Stock Machines.**
**Sat., Mar. 18th—Victory Cup Trial.**
**Sat., Mar. 25th—East Midland Centre A.C.U. Open Reliability Trial.**
**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Sat., April 1st—Western Centre A.C.U.—Open Reliability Trial.**
**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**
**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs. June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**

### MAKING A TRAILER.

Will the ex-W.D. aeroplane wheels and axles which are now available be suitable for a trailer which I am building for my Harley-Davidson, to carry about 6 cwt.?; also if 700×80 mm. or 28×3in. tyres will fit the 700×75 mm. wheels advertised.—W.K.

The aeroplane wheels and axle which you mention would be quite suitable for the purpose of making a trailer, and they would certainly carry the load; 700×80 mm. tyres would fit the 700×75 mm. wheels, but it is doubtful whether 28×3in. American size tyres would answer as their internal diameter is much greater.

### A SIDECAR FOR SKID PREVENTION.

I have a 2¾ h.p. three-speed Douglas and have had the misfortune to have a skid and break my collar bone. Being no longer young, some of my friends advise me to attach a light sidecar for safety's sake. Others say, "Don't, you will be less safe than riding solo." I know the machine is not intended for sidecar work, but I should almost always use it empty. There are a good many 2¾ h.p. sidecar outfits on the road now, but I always doubt their capabilities. I want to be on the safe side. It strikes me that with a Douglas the kick-starter is on the wrong side for a sidecar.—W.A.

Your machine should be quite capable of pulling a light sidecar, especially if you do not intend to use it extensively for passenger carrying. A light machine with a light sidecar ridden empty is rather difficult to manage at first, especially when rounding left-hand bends, but there is certainly no danger of skidding, and very little fear of the sidecar lifting if only reasonable care is used. It might be difficult to use the kick-starter on the Douglas, but the machine is so easily started by pushing on second gear, that it should not have much bearing on the matter. Just at first it would be advisable to carry about 56 lb. of dead weight in the sidecar to keep it down on corners.

### MAGNETISED MAGNETO DRIVING SPROCKET.

I have a Dixie magneto, and the sprocket becomes magnetised. I have taken both magnets off, and find this condition ceases, but occurs the moment the magnets are replaced. Is this detrimental to magneto? If so, I should be glad if you can tell me how to prevent it. —R.T.D.

We cannot say definitely whether the magnetising of the driving sprocket is detrimental to the magneto. It should not be so, of course, as, theoretically at any rate, the rotor spindle should be of non-magnetic material. Providing your magneto gives reasonable satisfaction, there is no need to worry about the condition described.

### MOTOR CYCLES AND NERVES.

On mentioning to some friends of mine, who have had considerable experience of motor cycles, that I am considering purchasing a sidecar outfit, they have advised me, on account of the shock and vibration which they say is apparent in most makes of machines, not to entertain the idea, as it is eventually detrimental to sound health, and particularly having a decided effect upon the nervous system. Personally, I have had no experience whatever, and I cannot contradict this opinion. Will you enlighten me on this matter so that I may profit by your sound and impartial advice?—H.S.

Although we have been in touch with thousands of motor cyclists, we have yet to hear of anyone having to give up riding as a direct result of the effect of vibration on the nervous system. Indeed, this idea seems to be quite contradicted by the fact that medical men frequently recommend motoring or motor cycling to persons of neurotic temperament.

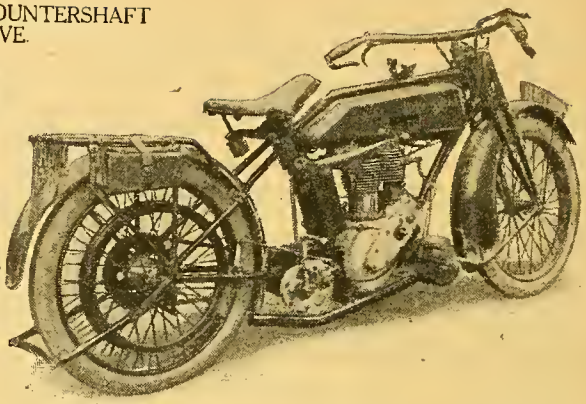
### DIFFICULTIES WITH A TWO-STROKE.

I have a 1920 motor cycle with 2½ h.p. Villiers two-stroke engine, C.A.V. magneto, and Amac carburetter, which has begun to run very erratically. The symptoms are popping back in the carburetter, slight misfiring at all speeds (but not up hill), and an occasional slowing down in speed without apparent reason. The engine has always run well on a 27 jet, but I have gradually increased the jet until I am now using a 34, but the popping is becoming gradually worse. Owing to a defect of my drip feed—and as I do much night riding I use the petrol system of lubrication—the engine gets plenty of oil, because it smokes occasionally, and the end of the exhaust pipe is always oily. Petrol consumption has dropped from 120 m.p.g. to about 70 m.p.g., and the engine has lost power and speed. Total distance run is about 3,500 miles and the compression is excellent. Engine recently decarbonised, and there is no undue play in the bearings. I suggest that the carburetter is at fault; but if it is an air leak, how can I find out this, and what is the remedy? The needle has a "collar" worn in it, but the carburetter does not drip. In addition to the above trouble, the engine during the last few weeks seems to race even when the machine is travelling at a moderate pace, and yet there is no belt slip. I have tested the gear ratios (Albion two-speed) with the machine on the stand, by pulling the belt round after marking the engine pulley and belt rim, but the ratios are the same as when the machine was purchased. Can there be some "slip" in the gears when on the road? —H.L.L.

Blow-back is usually caused by the mixture being too weak, and this may be brought about by an air leak in the induction system, or by a partial stoppage of the petrol supply due to a floating obstruction in the carburetter between the float chamber and the jet, or in the jet itself. Another possible cause of trouble is that the filter at the petrol pipe union beneath the float chamber is choked, or that the needle sticks in its seating. The transmission slip might also account in part for high consumption. It is almost certain to be belt slip, as the gears are positively engaged and cannot slip.

## CONVERSIONS TO COUNTERSHAFT CHAIN DRIVE.

Several readers have asked recently for instructions on the conversion of direct belt-driven machines to countershaft drive. Here is a 3½ h.p. Rudge-Multi, fitted up by A. Pilkington & Co., 390, Lichfield Road, Birmingham, with a Sturmey-Archer gear box, new bottom bracket and stays, and a new wheel and brakework to suit the chain transmission.



### FITTING DYNAMO LIGHTING.

What do you consider a suitable place from which to drive a 12 volt dynamo on an 8 h.p. Zenith sidecar outfit, and what is the best voltage and candle-power for the lamps I could use for head, side, and tail? The lamps will be fitted in series.—G.S.W.B.

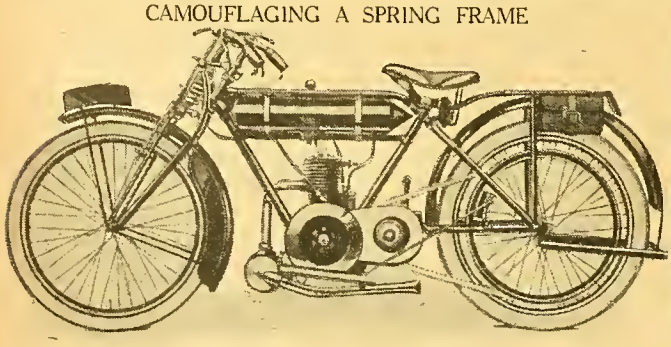
It should be possible to fit some attachment for the driving pulley of the dynamo on to the main shaft of the engine, probably on the outside of the Gradua pulley. You will, of course, need an accumulator, and the wiring of the lamps in series is not to be recommended at all. Without knowing the output of the dynamo, we cannot specify any special sizes for the bulbs in the various lamps. A 6 volt dynamo would be preferable for motor cycle lighting, and it should for choice have an output of 4 to 5 amps. A 6 volt 3 amp. bulb in the head lamp and 6 volt ½ amp. in the side and the tail, all the lamps being in parallel, would not overload the dynamo, so that an electric horn and speedometer lamp, etc., could safely be used in addition.

### SLIPPING OF SELECTIVE CLUTCH GEAR.

The gears of my 1918 3½ h.p. P. and M. outfit have for some time been giving trouble by slipping. Evidently the expanding drums are considerably worn as adjustment merely improves matters for a short time. Is there on the market any make of gear (two or three-speed) giving, of course, free engine and kick start that I could fit to my outfit in place of the manufacturers' gear? If so, would you be good enough to give particulars?—H.W.H.

There is no gear which could be readily fitted to your machine in place of the standard one, nor should there be any need to scrap such a normally satisfactory and reliable item of the specification. Slipping of the selective clutches is very readily put right by the insertion of packing strips in the wedge bars. You should write to the makers for their instruction booklet and spare parts list. We assume, of course, that the slipping is actually taking place in the gears, and not, as frequently happens, in the slipping clutch on the engine-shaft. It is quite likely that tightening up the adjusting nuts on the latter would solve your difficulties.

## CAMOUFLAGING A SPRING FRAME



When people ask "Where are the spring frames?" there is some excuse for them forgetting such a design as the Paragon lightweight, which is so neat that it needs close examination to discover that it really has a rear suspension system. It is made by the The Motor Works, Cressing Road, Braintree, Essex.

## READERS' REPLIES.

### ACCUMULATOR CHARGING.

With reference to the reply of Mr. Arvon Glynne in your issue of January 19th on accumulator charging, we think that if he was charging his accumulator from a 220 volt circuit at, say, 2.5 amps., the 100 ohm. "A" net would get very hot, as this net is only designed to dissipate 260 watts, whereas 220 volts at 2.5 amps. is 550 watts. We would strongly advise two of our B Type nets placed in series rather than the above. Should any of your readers be in difficulty, if they will write us stating the voltage of their circuit and charging rate in amps. of their cell, we shall be pleased to advise them as to the best net or combination of nets to use.—F. W. POTTER AND CO.

### SOME ROAD GRADIENTS.

Your reply to "W. U." on the question of road gradients was interesting, as I know Blue Bank fairly well, and have twice been over Mamm Tor, and I should certainly regard the contour book you quote as unreliable in these instances. Without precise measurements, but from observation confirmed by my machine's comparative performance on a grade of 1 in 7 (measured) over a longer distance than the steepest portions of either of the hills mentioned, I should estimate Blue Bank as 1 in 4½, and Mamm Tor 1 in 6 in the worst places. If the former is really 1 in 7, then I should expect such a hill as the Old Wyche, reputed 1 in 2½, to be quite unclimbable, if only on account of the risk of falling backwards. I should be interested to hear of authentic measurements. Whilst on the subject of gradients, I was told by a friend who quoted a well-known contour book, that the last corner on Kirkstone Pass, approached from Ambleside, was 1 in 3. This also I was unable to believe.—U 5436.

### PETROL AND OIL CONSUMPTION OF A SINGLE.

I cannot help writing about "H.W.B.'s" consumption query regarding the 1921 4¼ h.p. B.S.A. solo. He says he gets only 65 m.p.g. with jet opened half a turn. I bought a similar machine new last March with a No. 2 B.S.A. sidecar, and during two days in August I covered 186 miles on a carefully measured consumption of 78⅓ m.p.g. with the jet threequarters open and a strong wind against me for over fifty miles. The weight of the outfit was 6½ cwt., including self and passenger, and many stops were made. On the other hand, my oil consumption has been heavy, viz., 525 m.p.g. for 3,152 miles, using B.B. oil. In other respects the machine is reliability itself, my only troubles being the exhaust valve stuck up twice.—S. E. J. LONGHURST.

### FOR A LEGLESS RIDER.

Regarding the type of machine best suited to the requirements of "Legless," I see that the "Harper Runabout" is mentioned as a likely mount if the enquirer "makes certain modifications." I cannot pass an opinion for or against the "Harper," because I don't know its structural details fully, but if what I am going to say is of benefit I shall be glad, as it happens that I am an enthusiastic motor cyclist and have been for many years. I am a member of the Leeds and District Motor Club, being on the committee for the last two years, and I am the holder of the Kelly Cup for the Leeds to London and back (400 miles), and I have gold, silver, and bronze medals for hill climbs, reliability trials, etc. I also hold the silver medal for second place in Yorkshire Centre A.C.U. Team Trial, 1920. All this, in addition to thousands of miles touring, I have accomplished on a 6 h.p. Royal Enfield Combination, which requires no alteration or modification whatever. Oh, by the way, I nearly forgot to say that I lost both my legs sixteen years ago. I am riding now my fourth Enfield, in every case the machine being standard in *every detail*. I should not care to trust myself on a machine fitted only with brakes operated by wires from the handle-bar, excellent as are the Bowden wires. The brake pedal on the Royal Enfield is on the off side, and stands just on the inside of the right artificial foot. All I have to do is to raise the foot and it drops on to the brake pedal, the weight of the leg being almost sufficient to apply the brake in most cases, and a gentle pull at the handle-bar gives me power sufficient to skid the wheel any time.—TOM HARDY.

---

## EXPERIENCES WANTED

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"P.R." (Northampton).—A.J.S. and Matchless 2-seater outfits compared; speed no object.

"C.H.L." (Brondesbury Park).—2¾ h.p. 3-speed Wooler with sidecar; speed and climbing.

"G.R.W." (Sutton Coldfield).—Villiers-engined lightweight, also 3½ h.p. Rudge Multi with sidecar; particularly belt experiences with latter when climbing.

"C.H.L." (London, N.W.10).—3 h.p. A.B.C. with sidecar: Life of bearings, springing, gudgeon pin fixings, and general efficiency.

"S.H." (Middleton).—2¾ h.p. Connaught: Comfort, consumption, lubrication, silence.

"M.L.L." (Aldeburgh).—Zenith-Bradshaw: Speed, valve noise; three-speed compared with Gradua model; oil consumption.

"A.V.W." (Beeding).—Dégory, Binks, or Atmos carburetters on 8 h.p. Reading Standard.

"R.H.C." (Falmouth).—1922 Quadrant with sidecar: Reliability; faults, if any.

"P.W.M." (Birmingham).—Atmos carburetter on 4 h.p. Norton and 2¾ h.p. A.J.S.: General results.

"R.B." (Southport). — S.A. impulse starter: ease of fitting and reliability on big twin.

"F.M." (Daventry).—4½ h.p. 1921-22 Humber: Reliability; brake power with sidecar; general experiences.

"W.S.H." (London).—Ner-a-car: Reliability; wear of friction disc.

SPARKLETS

### Kingsbury Spare Parts.

All the jigs, tools and material used in the manufacture of the Kingsbury motor cycles at Hendon have been purchased by the Vulcan Works, Ltd., Welshpool, from whom spares may be obtained from stock.

### Piston Ring Sizes.

A most useful thing for garage proprietors is the Brico Piston Ring Directory, a large wall chart giving the piston ring sizes for all standard motor cycle, car, lorry, and tractor engines. It is published by the British Piston Ring Co., Ltd., Holbrook Lane, Coventry.

### Sheet Celluloid Supplies.

Polished sheet celluloid, in various thicknesses and a number of sizes, from 54in. × 24in. down to 13½in. × 12in., is being offered by the Athol Engineering Co., 9, Peru Street, Higher Broughton, Manchester; it is eminently suitable for windscreens, windows, etc. The same firm also makes windscreens and aprons to customers' special requirements.

### Under New Management.

We are glad to learn that the manufacture of the Wooler motor cycle has been resumed, the company having been bought by Mr. William Dederich, of Messrs. W. Dederich, Ltd., railway contractors, Imperial Buildings, Ludgate Circus, London, E.C.4. The Alperton Works will be carried on under entirely new management, but Mr. Wooler will continue as the company's chief engineer and designer.

### Down a Long Hill.

*Apropos* of "Ixion's" recent paragraph on the subject of oil plugs, resulting on closed throttle coasting on long hills, Bowden Wire, Ltd., of Willesden Junction, redraw attention to the fact that the A.J.S. teams in the last Six Days Trials used Bowden extra air inlets, and by so doing helped to attain economic running as well as guarding against oiled plugs on the descents.

### Wiring Diagrams.

"Lektrik Lighting Connections" (A. P. Lundberg and Sons, 477, Liverpool Road, London, N.) is a most useful booklet dealing with electric lighting, giving diagrams of wiring, illustrations of various types of switches, and a complete section devoted to motor car lighting, including diagrams for the electrical wiring of motor cycles; the price is 1s. 2d. post free.

### Catalogues Received.

James Cycle Co., Ltd., Greet, Birmingham: Much informative matter and many illustrations relative to the James range of machines lose much of their effectiveness on account of the curiously grained paper on which the twenty-four page catalogue is printed.

# CURRENT CHAT

## Time to Light Lamps

| | | |
|---|---|---|
| Feb. 16th | .. .. | 6.13 p.m. |
| „ 18th | .. .. | 6.17 „ |
| „ 20th | .. .. | 6.21 „ |
| „ 22nd | .. .. | 6.25 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Police Activity.

Number-plates and rear lights are receiving close scrutiny in the Camberley district, according to the report of a reader who has suffered there recently.

### A Royal Order.

A special scooter for her own use has been ordered by the Queen of Belgium from Messrs. Roberts and Hibbs, of Manchester, the makers of New Scale machines. This follows on the satisfaction which the King of Belgium has had in his New Scale motor cycle which was recently supplied.

### Another Second-hand Show.

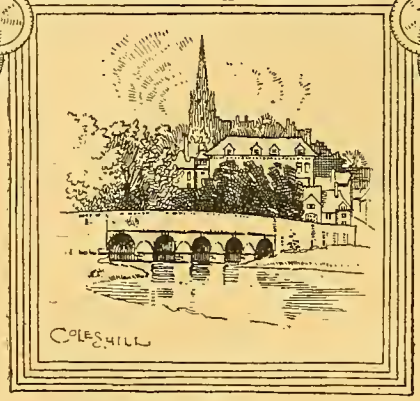
The fourth show of used motor vehicles, including motor cycles, is to take place at the Crystal Palace from March 27th to April 8th. It will be recalled that the vehicles entered are examined by experts, and that a certificate recording the condition of the vehicle is displayed on it during the show as a kind of warranty. The organiser is Mr. William Glass, 12, Buckingham Street, Strand, London, W.C.2.

### Rendezvous Wanted.

A reader in North London suggests that motor cyclists around the Metropolis should pool their experiences of beauty spots and comfortable quarters suitable as the objectives of week-end trips. By so doing the way to new haunts would be opened to many who at present have exhausted their own immediate neighbourhood. This is a commendable idea, and our columns are open for information regarding (in the words of our correspondent) "happy experiences of week-ends spent at hotels or inns with rambling, boating, fishing, or any pleasant surroundings within fifty miles of London."

### Institution of Automobile Engineers.

On Tuesday next, Dr. W. R. Ormandy and Mr. E. C. Craven will read a paper on "The Physical Properties of Motor Fuels—A Discussion of their Bearing on the Motor Industry" at the Chamber of Commerce, New Street, Birmingham, at 7 p.m. On Thursday next (the 23rd) Mr. E. L. Bass will read his paper on "Engine Lubrication" in the Masonic Hall, Coventry, at 7.45 p.m.; while on February 28th, at the Institution of Mechanical Engineers, Storey's Gate, St. James's Park, S.W.1., at 8.30 p.m., various recording instruments used on motor cars will be demonstrated and discussed.



## Special Features

VALVE BOUNCE MADE VISIBLE.
INTERNATIONAL TOURING.
PASSENGER MACHINE TOPICS.

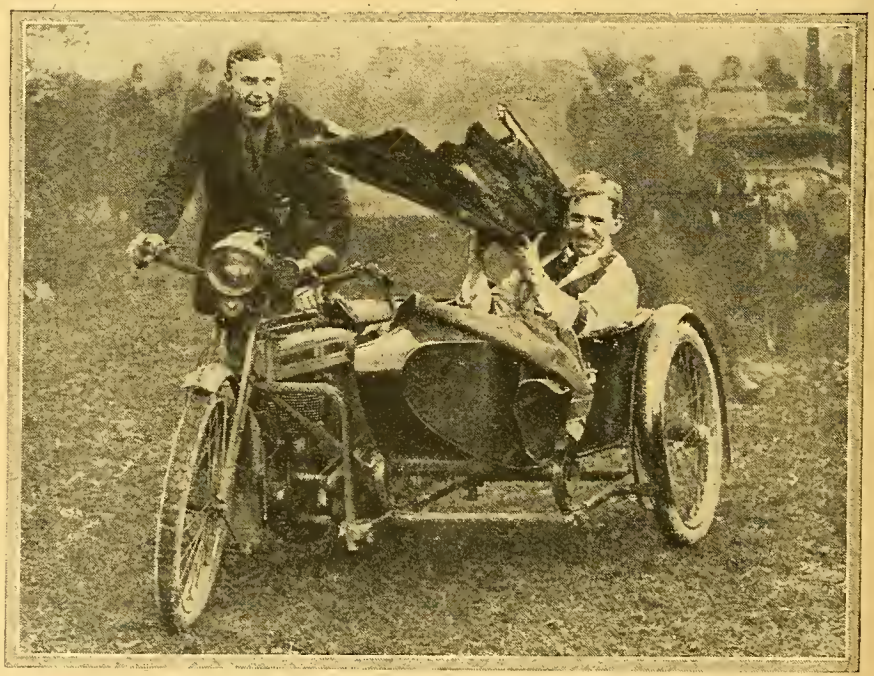
### The Colmore Cup Trial.

First of the year's classic one-day trials, the Colmore Cup event, will be held on February 25th. As last year, it is no longer an open competition, but all members of clubs affiliated to the Midland Centre A.C.U. are eligible, the organising club, of course, being the Sutton Coldfield and North Birmingham A.C. The route to be followed is apparently the same as in previous years, Stonebridge being the starting and finishing point, and Cheltenham being the lunch stop. Starting from cold, stopping and restarting on a hill, and flexibility tests are to be held, and there is as usual a special class for machines with fixed gears. The entry list closed this morning, and a large field will face the starter

### Yorkshire D.R.'s Re-union.

Except for four members kept away by illness or business, there was a full muster of former motor cyclists of the 62nd (West Riding) Divisional Signal Company, Royal Engineers, at the Griffin Hotel, Leeds, on Saturday evening, January 28th, on the occasion of the fourth annual re-union. One member had travelled from Eastbourne specially to be present, but the others were from various parts of the West Riding. The chair was taken by ex-Sergt. T. I. Laxton (Batley), who, after a seven-course dinner, gave the loyal toast. The health of "The D.R.'s" was proposed by ex-Artificer Corpl. T. F. Groocock (Dewsbury); and "Absent Friends" was submitted by ex-Artificer Corpl. H. Crump.

There was no demand for an alternative menu offered by ex-Artificer Groocock, as follows:—*Entrée, Pâté Valve Grinding; Soups, Price's Huile de Luxe, Vacuum B; Fish, Gudgeon Pins; Stews au Waterhouse* and *au Squires* (two members memorable for their culinary efforts in France); *Joint, Universal, Saddle of Brooks, Baked ¼in. Balls and Insulation Tape; Sweet, Compôte of "Tiffy's" Spares; and Dessert, Nuts and Washers.*



LENT BUMPING AT CAMBRIDGE. A Triumph sidecar utilised to carry home the "Queen's" damaged bow after being broken in bumping "Lady Margaret."

### Inter-'Varsity Brooklands Meet?

Brooklands may be the scene of an inter-'varsity (Oxford and Cambridge) motor cycle race meeting some time in the summer.

### A New Midland Road.

A new road from Birmingham to Wolverhampton is to be bullt at a cost of £400,000. The new road will be nine and a half miles long and eventually will have a width of 150 feet.

### The late Sir Alfred Bird.

Sir Alfred Bird, M.P. for Wolverhampton, who last week was knocked down and killed by a motor car outside St. George's Hospital, was a remarkable man. At the age of seventy and more the old gentleman would leap on his bicycle on a Saturday and go for a long tour comprising the number of miles corresponding to his birthday, with apparently no fatigue whatever. Sir Alfred Bird was president of the Wolverhampton and District M.C.C.

### Those Rear Lights.

"Uncompromising Opposition" is the attitude to be displayed by the South Hants District Association of the C.T.C. towards any proposed legislation on the matter of rear lights for cyclists. The *Southern Daily Echo* recently reported at length a resolution which was passed in which, almost hysterically, a catalogue of the dire consequences and dangers which would follow the reimposition of cyclists' rear lamps was given. In greater words than ours, "Methinks he doth protest too much."

### A French One-Day Trial.

Sixty-one entries have been received for the one-day trial organised by the *Union Motocycliste de France*, which is the French equivalent of the A.C.U., on February 19th. There are numerous English machines but only one English rider—Pinney, the Triumph exponent, who resides in Paris.

There are five Peugeots, one Velocette, two Royal Enfields, two D.F.R.s, one Madoz, one Rush, two A.B.C.s, one Sunbeam, five Harley-Davidsons, one B.S.A., four Triumphs, and one New Hudson. There are also two Monet-Goyon scooters.

### A T.T. Dance.

To raise funds to be handed over to the Auto Cycle Union to help to defray the cost of the T.T. Races, the Manx Motor Cycle Club is organising a masked ball at the Villa Marina, Douglas. Tickets will be issued by the Committee at 5s. 6d. a head, which will include supper, while the balcony at the Villa Marina will be open to the general public at a charge of 2s., entitling the purchaser to participate in the grand whist drive.

His Excellency the Governor and Lady Fry have consented to give their patronage, and have signified their intention of being present. The Chief Constable (Col. Madoc), His Honour Deemster LaMothe, Mr. A. B. Crookall, Mr. H. Norris, Mr. Hughes-Games (Vicar-General and Director of the Steam Packet Co.), Mr. Corkhill (Manager of the Steam Packet Co.), and other well-known people will be present. The dance will be held on the evening of Shrove Tuesday.

### Father Has to Pay?

Recently, at Kingston, a fourteen-year-old rider was summoned because his number-plate was obscured by the coat of his father, who was riding on the carrier. The boy was fined 10s., but the summons against the father for aiding and abetting was dismissed.

### Motor Cycle Taxation in 1923.

That influential body, the Motor Legislation Committee, has urged the Ministry of Transport that motor taxation be reduced by 25% all round from the beginning of next year, and that consideration be given to reverting to a system of taxation on motor spirit.

### Loyalty to the Parent Body.

It is interesting to know that the New South Wales M.C.C., the Hamilton M.C.C., the Goulburn M.C., New Castle M.C.C., Toowoomba M.C.C., and the Cootamundra M.C.C. are affiliated to the Auto Cycle Union of Great Britain. The M.C.C. of New South Wales is the parent body in Australia.

### Inaudible and Insufficient Warning.

The other day a native driver was hauled up before the Maritzburg Borough Court, and, when under trial, was asked what he had to say for not blowing his horn. "I wanted to make it cry, but it would not cry." His meaning was satisfactorily explained by the official interpreter.

### An Antipodean Acceleration Test.

Parramatta was the scene of a quarter-mile acceleration test recently held by the New South Wales M.C.C. In the motor bicycle class the winner was R. King (7 Excelsior), while the second place was held by H. Munro (3½ Norton). In the sidecar class M. Wood and C. Wood were first and second respectively on 7-9 h.p. Harley-Davidson outfits.

### Safeguarding Road-Repair Men.

Where large sections of road are being repaired, the road men are usually protected by barriers, but in some cases where small portions are being dealt with in patches, etc., it is not practicable to protect the workman in this way. In consequence, the Automobile Association appeals to road users generally to drive with due regard to the safety of such men, especially so since there are a few reports of alleged inconsiderate driving when passing road men at work.

### A South African Consumption Test.

A petrol consumption test was recently held near Durban for the S.A. Motorist Cup, over a course of 24½ miles. Motor bicycles were allowed half a gallon of petrol and 1¼ hours for the course, while sidecar outfits were allowed one gallon of petrol and 1½ hours for the course. The results were as follows: 1, N. Taylor (7-9 Harley-Davidson sc.), 55 m.p.g.; 2, R. Suzor (3½ Norton), 163 m.p.g.; 3, S. Harris (8 Enfield sc.), 64 m.p.g.; 4, G. Elgin (4¼ B.S.A.), 106 m.p.g.; 5, G. Clark (8 Enfield sc.), 42 m.p.g.; 6, C. Young (8 Enfield sc.), 51 m.p.g.; 7, S. Ford (4 Triumph), 115 m.p.g.; 8, S. Williams (8 Enfield sc.), 46 m.p.g.; 9, O'Dougherty (3½ Norton), 100 m.p.g.

### A South African Hill Climb.

At a hill-climb organised by the Natal M.C.C. at Westermeyer's Hill, the winners were C. Woodward (3½ Norton), C. H. Young (3½ Triumph), and L. R. Cohen (4 Triumph). The first six machines were of British manufacture.

### Reviving Export Trade.

After six months' progressive decline in exports of British motor cycles, it is distinctly encouraging to find that the figures for January show a substantial increase amounting to £17,217 in value. During last month £57,183 worth of machines and parts was exported, as compared with £39,966 in December. On the other hand, imports show an increase of £2,797, the total value for January being £11,968.

### The Motor Coach.

Any among our readers who are interested in the running and maintenance of motor coaches should make a point of obtaining a copy of the Special Motor Coach Number of *Motor Transport*, which was published on Monday last. This deals with many interesting aspects of the motor coach movement, including chassis design, coach-work and seating accommodation, as well as matters affecting the organisation and control of a passenger-carrying service. The issue throughout is profusely illustrated, and altogether provides a very valuable work of reference.

### Congratulations.

It will be remembered that Mr. E. Kickham, the well-known agent and competition rider of Bristol, crashed very badly in the Grand Prix in France last year. A long period of hospital treatment, several operations in France, and a painful journey home were undergone before he became convalescent in October, and many friends will remember that, with much painful effort, on crutches, he gamely attended the Olympia Show for a few days. Just when good progress seemed certain, about Christmas-time, he contracted a cold, which quickly developed into pneumonia, and once again he became an invalid. He has pulled through, however.

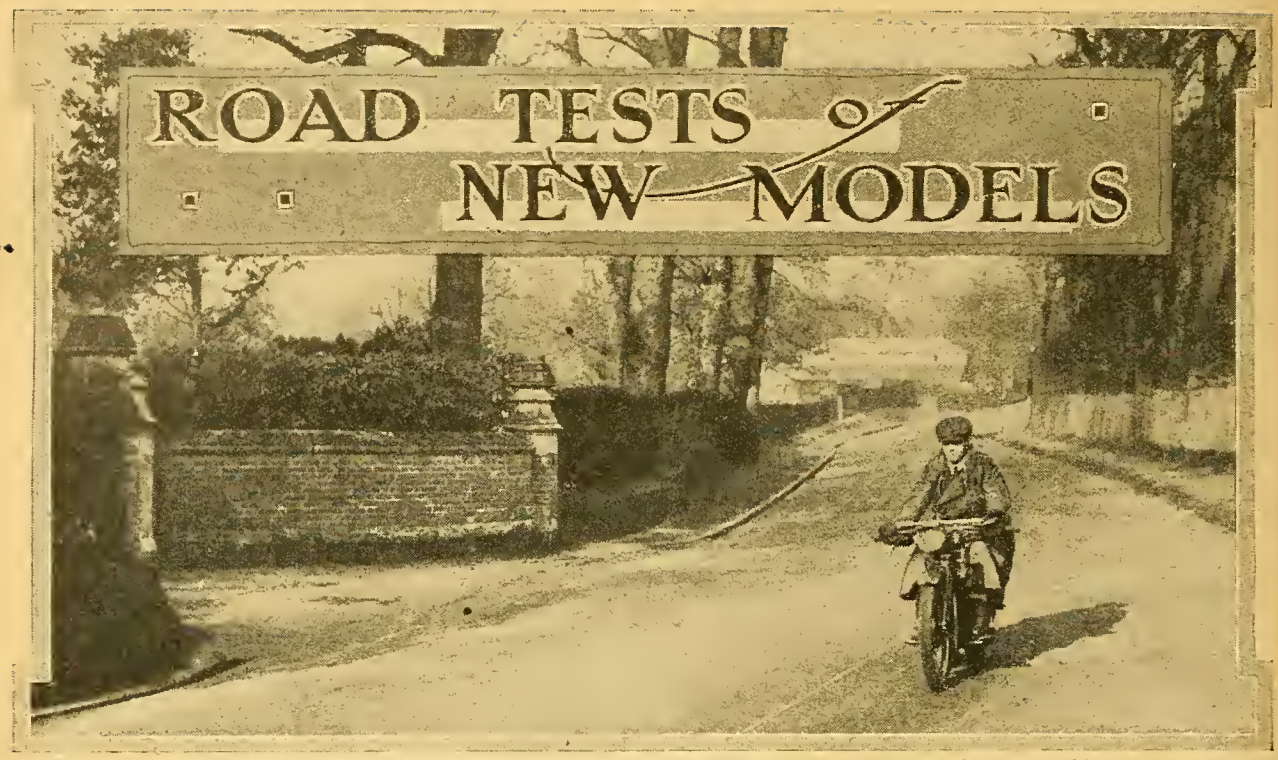
### No Speed Trials at Weston-super-Mare.

The Bristol M.C. and L.C.C. recently decided that they will not organise any more speed trials on the sands at Weston-super-Mare, on account of the treacherous nature of the surface; thereupon they made application to the local Council for permission to use the promenade or the adjacent Marine Drive, in June next.

After much correspondence the Works Committee reported to the monthly meeting of the Weston U.D.C. that they were unable to sanction racing on any public highway within the district.

Thus the powers that be definitely put the bar up to an event which would attract large numbers of visitors to the town.

There is a fine stretch of sand at Bream, a few miles below Weston, which is said to have an excellent surface after certain tides; but, failing that, the Bristol Club are without any suitable speed trial venue within reasonable distance of their district.



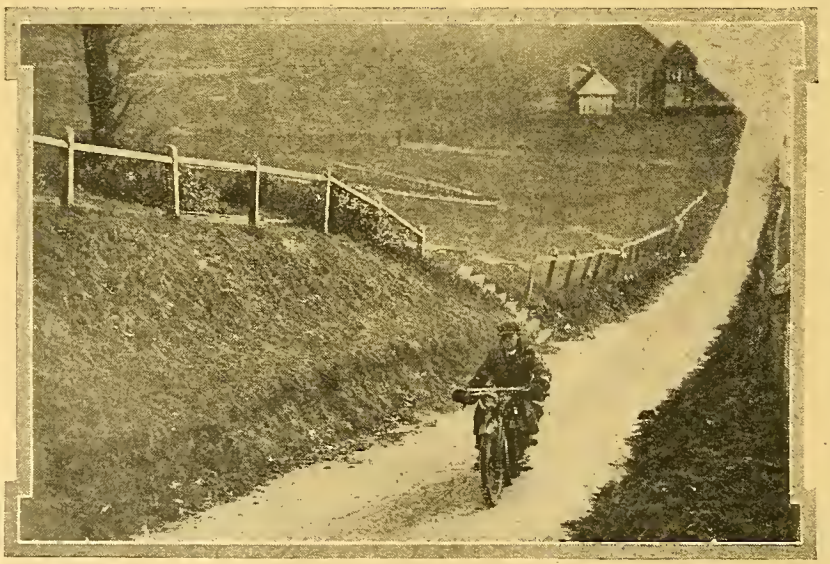
The 4 h.p. Flat-Twin Harley-Davidson.

*SPECIFICATION.*

| | | |
|---|---|---|
| *ENGINE: 4 h.p. flat-twin (69 × 76 mm. = 584 c.c.)* | *CARBURETTER: Schebler automatic* | *BRAKES: Internal expanding and external contracting.* |
| *GEAR-BOX: Harley-Davidson three-speed, multi-plate clutch and kick-starter.* | *TRANSMISSION: Primary gear drive; protected rear chain.* | *WEIGHT: Approximately 270lb.* |
| | *TYRES: 27 × 3½in. and 26 × 3in.* | *PRICE: £140; £155 electrically equipped.* |

IN America the 4 h.p. flat-twin Harley-Davidson is regarded purely as a solo machine, and although in this country it is often fitted with a light sidecar, and is quite capable of such service, the factory which produces it no doubt regards the fact with something akin to mild surprise.

It was with this in mind that we took over one of these machines for a test of its road capabilities and behaviour — particularly as compared with the British conception of an ideal solo mount. Since the ideals of America in this matter are obviously not the ideals of Coventry, Birmingham, or Wolverhampton, it is not surprising that the respective machines should differ considerably both in general design and detail specification.



On the 1-in-4 portion of Brooklands test hill.

### Contrasts in Control.

This latter point was very forcibly impressed on us when we rode up to the Harley-Davidson depôt in Newman Street on a typical Coventry-built sporting single, and a few minutes later rode away on the American flat twin.

**Road Tests of New Models.—**

An automatic carburetter (Schebler) controlled by the right twist grip, a heel and toe pedal operated clutch, and a service brake (internal expanding) on the right-hand side of the machine instead of the left are the main points in which the Harley differed from our previous mount, but most readers will realise that these factors contained possibilities of half-a-dozen awkward moments in the same number of initial miles. Added to that is the fact that, almost immediately after starting up, we found ourselves negotiating Oxford Street traffic at—so it seemed!—its very worst. The Harley came through this severe test of controllability unscathed and with flying colours.

### Controllability.

Only in three prolonged traffic blocks was the rider compelled to put down a foot; the slow-running setting of the Schebler saw to it that the engine was not once involuntarily stopped, and the beautiful balance, good acceleration on second gear, and efficient braking of the machine combined to transport us clear of London traffic with considerable rapidity and without—as had been half-feared—arousing the ire of taxi-driver, policeman, or 'bus-driver.

All things considered, we think that this performance speaks for itself and that any further comment on the controllability of the machine—which weighs about 280lb.—would be superfluous.

Further out on the Portsmouth road other characteristics began to make themselves apparent. The engine, as nearly as any reciprocating engine ever will be, is vibrationless at all speeds, and, in conjunction with 27 × 3½in. and 26 × 3in. tyres on the rear and front wheels respectively, provides such a degree of smooth running and comfort that, in our opinion, it would be absurd to fit a spring frame.

Acceleration is not startling, but a quick turn of the throttle grip as far open as it will go brings a perfect response from the engine without any of the "dead-spot" misfiring much too common on flat twins with extensive intake manifolds. Exhaust heated inlet pipes are probably responsible for this. On the road the maximum speed—42 m.p.h.—was disappointing, and a move was made to Brooklands to see if this could be improved upon without retuning; 45 m.p.h. proved possible on the straight, but no more. If no speed indicator had been fitted we should certainly have estimated the speed at fifty, but, while admitting the possibility of an error by the Corbin-Brown speedometer (perhaps caused by the gigantic rear tyre on this particular machine), we have learned not to place too much reliance on personal guesses at velocity.

It would be unfair, too, to estimate the fuel consumption during the time the Harley was in our possession, but at touring speeds well above the legal limit 65 m.p.g. must be considered a fair average. An early 45 miles cost just the price of 1 gallon of fuel, but this was considerably improved before we returned the machine.

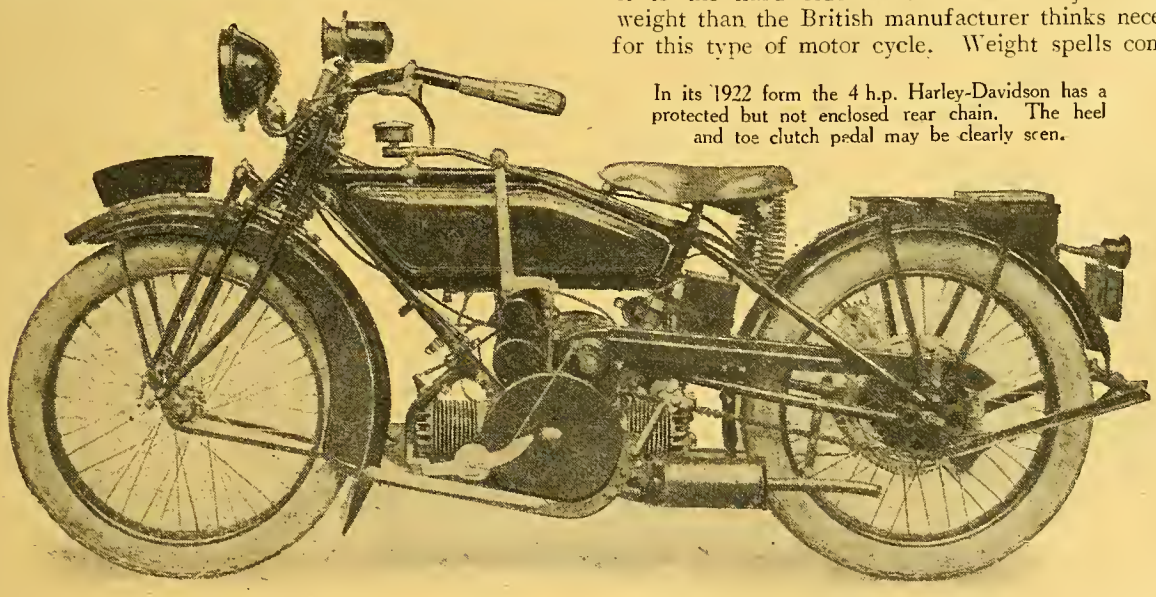
### On Brooklands Test-Hill.

There are no easily-reached hills in Surrey or the adjoining counties that might reasonably be expected to extend the Harley, and therefore it was decided to be content with an ascent of the Brooklands test-hill.

Lubrication is by mechanical pump, and in consequence the rider may dismiss the subject from his mind; there is an auxiliary hand pump also.

Gear-changing and kick-starting are more efficiently performed after some little experience. The gears are easily "found," but the "high" position of the lever is apt to be disturbed by the skirt of a heavy leather coat. The clutch is smooth in engagement, and the large pedal permits very gradual manipulation.

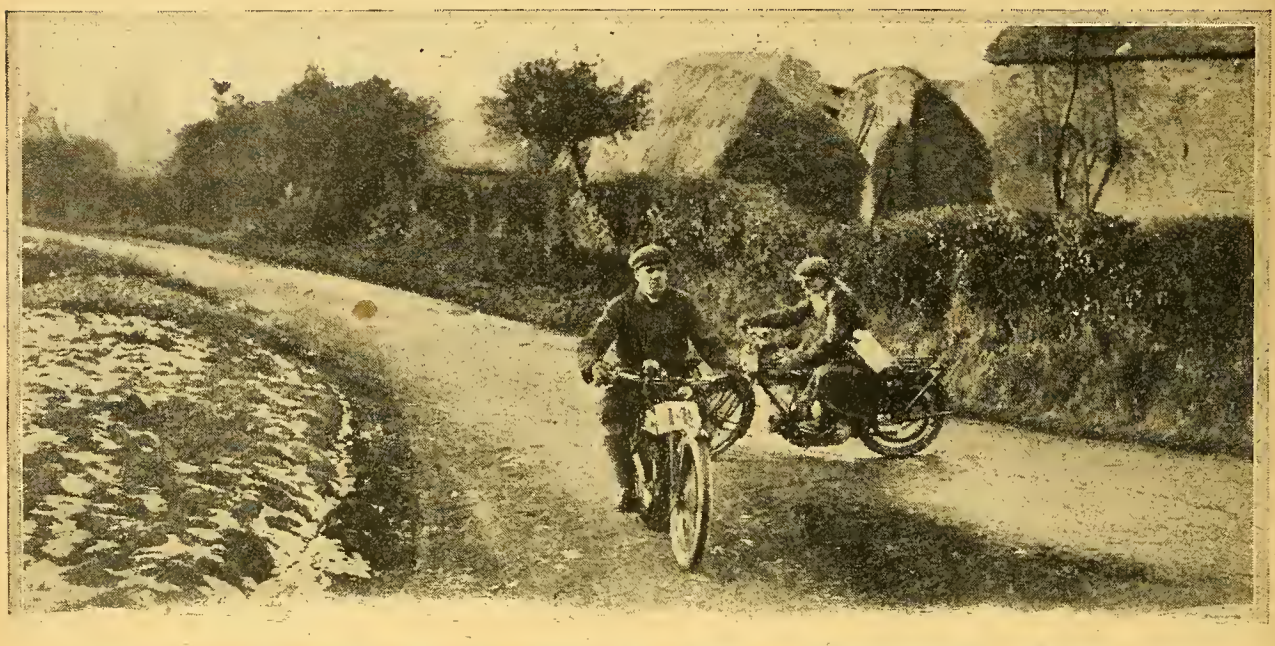
Summarising, the 4 h.p. Harley is extremely smooth running, very controllable, and very comfortable, but is not particularly speedy at anything approaching an economy setting of the carburetter. From all indications, it should be just as steady on greasy tramlines as on dry tarmac, and has much to commend it to the hard rider who does not object to more weight than the British manufacturer thinks necessary for this type of motor cycle. Weight spells comfort.



In its 1922 form the 4 h.p. Harley-Davidson has a protected but not enclosed rear chain. The heel and toe clutch pedal may be clearly seen.

# ROUGH-RIDING IN WARWICKSHIRE.

## 42-Mile Course in the Coventry and Warwickshire M.C. Solo Trial proves Impossible at 20 m.p.h. Every Finisher Late.



Two chain-driven Triumphs on one of the "natural" hairpin bends. The riders are A. P. McGowran and D. Brandish.

WE imagine that there is only one way in which last Saturday afternoon's solo championship trial of the Coventry and Warwickshire M.C. might have been made more difficult, and that would be to hold it over the same route after a week of rain.

There is no need, however, for a re-run, for every one of the 45 starters—excepting three who retired altogether—finished late, only six being less than a quarter of an hour behind. Since the course only totalled 42 miles, its "discoverer," the Rev. J. M. Philpott, must be heartily congratulated—unless the reader be one of the suffering competitors!

Alarming rumours were current at the start (at Keresley Church) that an official exploring party had set off one morning last week to verify the mileages and that darkness had fallen with the task uncompleted, but no one really believed that it was possible to map out such a route beginning and ending within ten minutes of Coventry. At the finish, however, all were agreed that it would not be disparaging to the Yorkshire classic event to christen Saturday's sporting scramble as a miniature Scott trial.

Some idea of what the latter half of the route was like may be gathered from this picture, which shows C. N. Green (5-6 Rover) cleverly recovering from a wild skid. W. L. Danskin (3½ Rudge) is behind.

Excepting S. A. Tomson (4 Triumph), who was carrying on—and actually finished—with a punctured rear tyre, few had much difficulty in keeping to schedule for the first 12 miles, and Atkin's Hill, although approached by a surprise left-hand turn and in a rather wet condition, failed to bring the majority of the medium- and heavy-weights off second gear. Perhaps half a dozen marks were lost for footing on the initial hairpin, but further clumsy driving in a stretch of unpleasant grease a few yards over the summit apparently went unpunished.

### Artificial Hairpins.

One or two natural and artificial hairpins—the latter constructed by means of judiciously placed flags—were the sole other causes of delay before the first and only time check, which was located sixteen miles from the start and at the foot of a precipitous track, down on the route-card as Steppe Lane.

Competitors were sent up this acclivity one at a time, and consequently many had quite a wait at the foot, which

**Rough Riding in Warwickshire.—**

valuable lost time may conceivably be allowed to the finishers.

The only possible track up the hill was a nine-inch wide ditch with a surface like a ploughed field. Heavy machines with large tyres were at a slight advantage, but ample foot-rest clearance was also necessary to avoid any further, and possibly disastrous, ploughing of the hillside. There were many complete failures and very few perfectly clean ascents.

A clean strip of banking near the summit saved the quick-thinkers and amply justified the inclusion of the test.

From here to the finish more than 50 per cent. of the course was a second gear "slither" over a disused Roman road, cart tracks, horse tracks, and no tracks at all. The only water-splash was a relief—for it was not deep and had quite a solid bottom; none availed themselves of the club's kind permission to take the single-plank foot-bridge.

**Quaint Names.**

Sister Susy's hairpin, being easy of access from the main road, attracted quite a crowd of spectators. Among the earlier men, E. A. Barnett (2¾ Francis-Barnett) and E. H. Broughall (3½ Coventry Challenge) made excellent performances; W. Brandish (4½ Humber), E. Tutton (2¾ Mars), H. J. Stretton-Ward (4 Triumph), A. P. McGowran (4 Triumph), W. A. Jones (4 Triumph), J. N. Roberts (2¾ New Imperial), A. Maclennan (3½ Triumph), and D. Brandish (4 Triumph), who was very late, were all good. F. Davis (4 Norton) footed before starting to negotiate the bend.

A veil may well be drawn on Temple and Cow Lanes and on the worst hairpin of all—half natural, half artificial—which, as there appeared to be no observer in the neighbourhood, everyone "cut"; but the final observed clamber, Gobling, was, to say the least, a remarkable obstacle.

As a matter of fact, Gobling was, and is, an absurd test, and would have severely tried a well-tuned tank, but the fact that the great majority of the riders reached the summit more or less under power proved that it was no real cause of complaint.

S. R. Philpot obviously found it difficult to keep his Douglas on a straight course. So did the others!

Only two men made anything like clean ascents of the upper reaches, M. G. Scalley (4½ Humber) and W. L. Danskin (3½ Rudge), and they probably failed lower down.

**Obstacles.**

E. H. Broughall (3½ Coventry Challenge) charged up to hit an overhanging branch of a tree, which was later cut away; E. A. Barnett (2¾ Francis-Barnett) very nearly made a clean climb, but stuck in the glutinous mud higher up; D. Brandish (4 Triumph) repeated this performance, but got away without actually stopping. Then A. P. McGowran (4 Triumph) made a sensational charge into the bridge and J. N. Roberts (2¾ New Imperial) gave up in apparent disgust. D. A. Atkin (2¾ Hobart) made a brave show, disdaining outside assistance; and A. Maclennan (3½ Triumph) was quite fast but by no means neat—apparently he ducked his head to save his glasses and simply opened his throttle trusting his steed to find a safe path for itself.

W. A. Jones (4 Triumph) and P. L. Mayo (2½ Coventry Eagle) both failed, and P. H. Johnson (3½ Rudge Multi) lurched right off the saddle. J. Hardy, whose Triumph had full touring handlebars, did well to get up with a little foot waving, but G. Packmann on a big Matchless was not nearly so effective; J. A. Watson-Bourne on his Brough Superior also footed. R. Grindlay (4½ Humber) was not so erratic as some; F. T. Sibley (3½ Rudge) failed and baulked C. N. Green (5-6 Rover), while R. Elliot on another Rover was also unsuccessful. G. F. Evans (3½ Sunbeam) came to the conclusion that it was better fun watching the others than attempting it himself.

After Gobling a few yards of main road gave hand oil pumps a much needed opportunity to be operated, and except for two further "make-weight" hairpins the going was fair to the finish.

# SCOTTISH SIX DAYS EARLY THIS YEAR.

OWING to the selection of the early date of May 1st for the commencement of the 1922 Scottish Six Days Trials, it has not been possible to announce the route, as the final selection of the test hills will depend to some extent on the weather prevailing during the period immediately preceding the event.

In the preliminary regulations, however, it is stated that "the proposed itinerary will include already well-known roads, and it can well be taken that any new portions to be included are suitable for trials purposes."

There will be approximately twelve test hills, but a failure on one alone will not result in the forfeiture of a gold medal. The trials are open to manufacturers, agents, or private owners, and the latter class is clearly defined, especially as regards the term "financial assistance."

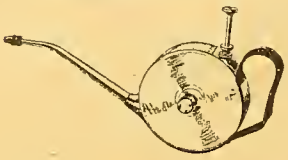
**Judge's Discretion in Making Awards.**

Awards will be made under the two headings of climbing and reliability, and team prize class special awards are offered for solo motor cycle, sidecar, and light car teams, the judgment of these being based, in the event of a tie on marks, on deviations from standard (*i.e.*, low gearing or skeleton machines), uniform steadiness in hill-climbing, general appearance (and condition) and cubic capacity.

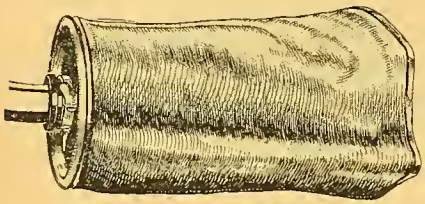
As in previous years, the timing will be carried out over one hour (approximately) checks, and each check will stand complete in itself, so that no time lost or made in one check may be regained or credited in another; replenishments must all be made in running time, and the machine otherwise will be under the control of the Edinburgh and District M.C. The usual allowance for tyre changing will be made on the third day, but no other repairs must be done.

Entries at ordinary fees close on April 17th (at double fees on April 22nd), and the address of Mr. Campbell McGregor, the secretary, is 6, Castle Terrace, Edinburgh.

## Force-feed Oiler.

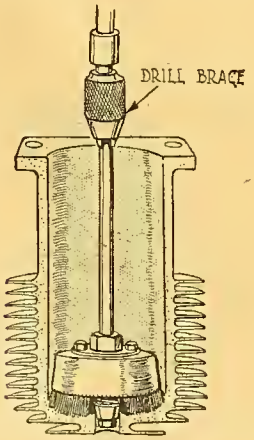


Oil injection under pressure through tiny motor cycle lubricators is made possible by this Bancroftian oil can. Price 3s. 11d. (The Bancroftian Co., 64, Bishopsgate Street, London, E.C.2.)



## Handle-Bar Muffs.

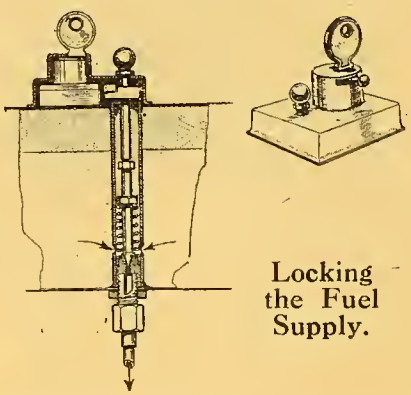
Having stiffened ends which are clipped over the handle-bar, John Bull muffs allow uninterrupted control of the machine. They are thoroughly waterproof and weatherproof and do not sag. (Leicester Rubber Co., Ltd., Post Office Place, Leicester.)



## Mechanical Decarbonisation.

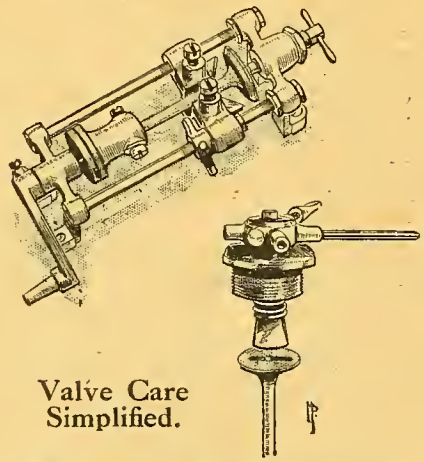
Provided that the steel bristles stand up to their task, decarbonisation by the "Vril Stick" should be child's play. A tapered plug in the compression tap hole centres the device, which, it is claimed, actually burnishes the cylinder-head, thus lessening the tendency to further carbonisation. (R. Birkett, Fern Lea, Clyde Road, West Didsbury, Manchester.)

## Fitments for the Rider's Convenience in the Garage and on the Road.



## Locking the Fuel Supply.

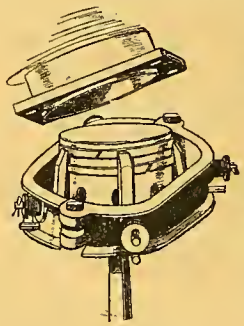
Simply a needle valve held down by the tapered, and thus self-adjusting, tongue of a Yale pattern lock, the Brierley petrol lock appears to have possibilities. Pressure on the knob end of the needle automatically shuts off the fuel supply, the little trigger (in the smaller sketch) merely actuating a key-hole dust-cap. (Brierley's, Ltd. (Premier Welding Co.), 140, Manor Street, Clapham, London, S.W.4.)



## Valve Care Simplified.

For those who possess a bench and who enjoy keeping their engines in perfect mechanical trim, the Grado self-centring valve facing tool (above) has been produced. When face-cutting operations are completed, the concentric grinding tool on the right, intended to displace a valve cap, may be conveniently used. (Grado, Ltd. 26, Cross Street, Hatton Garden, London, E.C.1.)

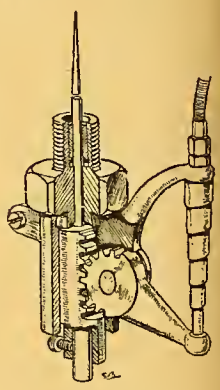
## Piston Replacement Made Easy.

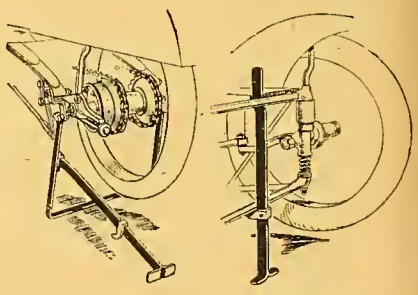


This somewhat elaborate but well-made tool has been designed to make easier the operation of replacing pistons with ultra "springy" rings. Its construction and action are obvious. (Robertson's Motors, Ltd., 157b, Great Portland Street, London, W.1.)

## Handle-bar Controlled Variable Jet.

Simply a handle-bar controlled (by means of a rack and pinion) inverted needle in the jet, this device adds considerable efficiency to most carburetters (Sutton, Pocklington & Co., 111, Clerkenwell Road, London, E.C.1.)





## Jacking up a Morgan.

By substituting the lower bolts of the rear spring shackles of a Morgan with others of special design, an anchorage is provided for this simple stand (left), which is detachable and is normally carried in the seat locker. Leverage is gained by a long foot lever, which is also available, as shown on the right, as a front wheel stand. Price 15s. (S. Hall, 91, St. Peter's Street, St. Albans.)

# THE MOTOR CYCLISTS' PARLIAMENT.

## Great Influx of Affiliated Members to the A.C.U.

THERE were fifteen items on the agenda of the first Auto Cycle Union General Committee meeting to be held in 1922 at the Royal Automobile Club on the 10th inst., and perhaps the most interesting item to record was the number of new clubs which have come into the Union's fold. These are the Bulwell M.C., the Buxton and District M.C., the Eccles and District M.C., the Prescott and District M.C., the Birmingham Motor Cycling Gipsy Club, the Guernsey M.C. and L.C.C., the Hirwain and District M.C.C., the Shirebrook M.C., the Slough and District M.C. and L.C.C., the Spalding and District M.C.C., the West Bromwich and District M.C.C., and the Wolverhampton Auto Nomads. The following clubs come under the newly formed North-Eastern Centre: The Alnwick and District M.C.C., the Annfield Plain and District M.C.C., the Bishop Auckland and District M.C.C., the Newcastle and District M.C., the Northern M.C., the South Shields A.C., the Stockton and District M.C., and the Sunderland and District M.C.

### Col. F. S. Brereton re-elected Chairman.

Pending the election of the chairman, the meeting was presided over by Mr. H. P. E. Harding, who gave up his seat during item two of the agenda, when Col. F. S. Brereton was re-elected chairman amid acclamations. The four vice-chairmen chosen to form the A.C.U. Management Committee were Major Potter, Messrs. Otto Thomas, H. P. E. Harding, and Doctor A. M. Low. Mr. Stanley Carter was re-elected hon. treasurer.

Arising out of the minutes of the competitions of the 9th January, Mr. T. W. Loughborough lucidly explained how the sum received for competitions and licences amounted to £1,061 8s. 11d., and how against that figure all expenses, salaries of the staff, and 30% of the time of the secretary and assistant secretary had been charged, with the result that the competitions cost about £1,000, or 6.5% of the total expenditure of the Union. It was agreed that the expenditure of this amount for the good of the pastime and the improvement of motor cycles was justified, and that a similar statement should be prepared when the annual accounts are presented.

The secretary then dealt with the difficulty of choosing a date for the South Wales open speed event, which threatened to clash with the Yorkshire Centre's open trial. Owing to the change in the date of the Essex Motor Club's open event, it was announced later in the afternoon that July 5th had been selected.

### N.E.A.A. Affairs.

Next, Mr. Loughborough explained how the seven local clubs hitherto part of the N.E.A.A. previously mentioned had considered the forming of a North-Eastern Centre from the ashes of the defunct body. The chairman proposed that the N.E. centre should be formed, which was agreed. Also arising out of the same minutes was a brief discussion on centre boundaries, but the matter was left to the Management Committee to investigate.

Items 12 and 13 on the agenda were then taken. These were proposals by Mr. E. Featherstone and Mr. Q. A. Nicol respectively—the first to the effect that members of sub-committees should be allowed third-class railway fares when attending these meetings, and the second that these sub-committees should be held on the same day as the General Committees. The first item provoked lively and lengthy discussion, but eventually both were passed together unanimously.

### Competitions Committee.

Previous to the election of the Competitions Committee there was a certain amount of misunderstanding regarding the eligibility of members. It was thought by a good many that, as well as those connected with the technical press, those associated with the industry were also ineligible, but it eventually transpired that only those connected with the sale of motor cycles came under the latter category; consequently, members engaged in the sales of engines or accessories and interested in the motor cycles to which they were fitted were free to serve.

The 1922 Competitions Committee elected consists of: Messrs. J. W. G. Brooker, G. J. A. Brown, E. J. Bass, W. Cooper, A. G. Reynolds, E. B. Ware, V. C. Hardy, A. V. Ebblewhite, E. Featherstone, N. Longfield, T. Rutherford, and Major V. Brook.

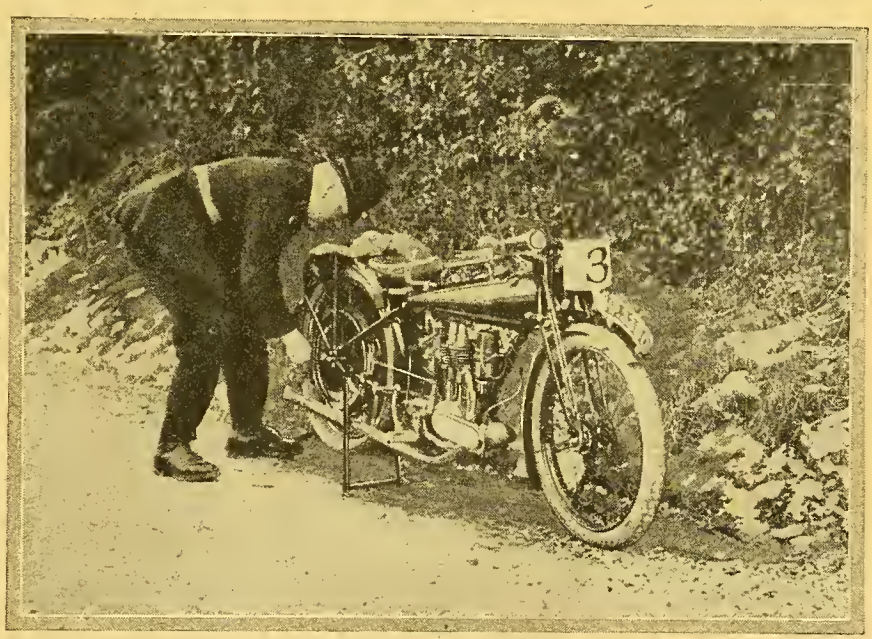
Next followed the election of the Touring Committee, which is now composed of Major S. R. Axford, Messrs. J. W. G. Brooker, W. Pratt, T. Rutherford, — Treloogan, E. M. P. Boileau, J. Samuels, S. R. Noble, B. Marians, Geoffrey Smith, and Lt.-Com. Pearce.

The question of the formation of a Cheshire Centre was discussed at some length, and it was eventually decided to refer the matter to the Management Committee.

When the question of representation on the R.A.C. General Committee came up, it was agreed to nominate the whole of the A.C.U. General Committee—sixty-three members in all. The dates selected for the A.C.U. General Committee meeting during the present year are May 5th, October 6th, and December 8th.

Mr. V. Horsman then sought to obtain a reversal of the decision at the Leicester meeting, which decided on the number of open trials to be held in 1922, and powers to be granted to centres to issue trials permits and license riders, but his first motion was lost and the remainder was left in abeyance.

The final proposals in the name of Mr. E. J. Bass were to write to the secretary of each affiliated club and request him to circularise his members and urge them to point out to the local M.P., or candidate, the unfairness of the present tax on motor vehicles, especially on those used by owner-drivers only at week-ends, and to urge members of Parliament, or candidates, to obtain the early repeal of the tax and resort to the tax on petrol.



POLICE SPORTSMANSHIP.

Years ago there was decided antagonism between motor cyclists and certain members of the police forces throughout the country. A happier feeling now prevails, however, as will be judged by the illustration depicting a police officer withdrawing a three-inch nail from the tyre of a competitor's machine in the Coventry and Warwickshire M.C. trial last Saturday.

### University College (North Wales) M.C.C.

A reliability trial (Bangor to Aberystwyth) will be held during Inter-Coll. week.

### Western Centre A.C.U.

Prizes won during the 1921 events will be presented at the annual dinner, to be held at Cheltenham on Saturday, March 4th. Tickets, 7s. 6d. each, may be obtained from Mr. John Howell, 12, The Foregate, Worcester.

### Public Schools M.C.C.

It has been decided to organise Sunday runs fortnightly throughout the year, meeting at a certain point on the outskirts of the Metropolis, and proceeding to the country for the day. Details will be published at a later date. The impromptu race meeting at Brooklands will take place on April 1st at 2 p.m. Members will be admitted to the track free of charge.

### Sheffield M.C.C.

About 50 members were present at the recent annual general meeting. The financial secretary reported a balance of £9 15s. 6d., which is most satisfactory, the annual subscription being only 2s. 6d. per member (paid-up members, 150).

Trials, picnics, and outings to beauty spots not generally known have been arranged for every week-end in summer and alternate week-ends in winter.

### Coventry and District Works M.A.

Membership of the association now totals between 300 and 400, and other works are coming into line with those which have already joined. A strong competition fixture list has been drawn up for 1922. The opening run takes place on February 18th, taking the form of a paperchase. Each rider will spin for his speed with a five-sided "Put and Take." Scheduled speeds, 16 and 20 m.p.h.

### Westmorland M.C.C.

Over thirty new members have swelled the ranks of the Westmorland club during the past few days, and arrangements for the 1922 programme are being rapidly completed. The first event takes place on March 26th. Many new features have been incorporated for every event, special attention having been devoted to novices. During the present month the committee are carrying out a propaganda campaign throughout the scattered county, members approaching all motor cyclists with a view to enlisting them in the ranks, and posters are to be exhibited in all places of advantage from the north to the south of the county.

### Solihull Old Boys' M.C.C.

It is proposed to hold an event each month during 1922 on dates that do not clash with open and "semi-open" competitions. The subscription is 5s.

### Kirkby Stephen M.C.C.

The activities of the club seem to have fallen into abeyance, but the Northern Centre of the A.C.U., through its chairman (Mr. Bryan Jefferys), is endeavouring to revive it.

### Herts M.C. and L.C.C.

The annual general meeting took place at the Red Lion Hotel, Hatfield, on Saturday, February 4th, under the chairmanship of Dr. A. M. Low. The club membership was stated to stand at 100, and a satisfactory bank balance was disclosed. The new hon. sec. elected was Mr. W. H. Hardman, "Westcott," Northaw, Potters Bar.

### Southport A.C.

The general annual meeting was held at the Queen's Hotel, Southport, on January 31st, and there was a good attendance of members. Officers for 1922 were elected including: President, Sir A. E. H. Naylor-Leyland, Bart.; chairman, Mr. G. T. Whiteside; captain, Mr. R. W. H. Cunningham; hon. treasurer, Mr. E. Jones; secretary, Mr. Rowland Hill, 75, Sefton Street, Southport. The programme for 1922 was provisionally agreed upon, and includes reliability trials, social runs, and speed trials on the shore, and, in connection with the latter, it is hoped to have a fifty or 100 mile race on a triangular course for amateurs riding their own machines. The opening run is a paperchase and is fixed for March 12th. The annual dinner and prize distribution took place on February 3rd at the Queen's Hotel.

### Northern Centre A.C.U.

Already two well-attended meetings have been held—at Kendal and Grasmere—and everything points to the centre having a very successful time in this, its second year. As only one open event was to be allocated to the centre, it was a matter of some discussion which club should be granted the honour. Cumberland asked for the event in good time, but at the eleventh hour Barrow came along and wanted a reliability trial. Westmorland proposed that the trial should be conducted by the centre itself. It was finally decided to run the event under the name of the centre, and the Cumberland club will simply be the organising body. It is quite on the cards that the centre will support Barrow in a speed trial which they wish to run, and this may well be an event of no little importance throughout Lancashire, Cumberland, and Westmorland.

### Prestwich and District M.C.C.

A special recruiting meeting is to be held on Wednesday next at the George Hotel, Sedgley Park, commencing at 7.30 p.m. All interested motor cyclists and light car owners are invited to attend.

### West Birmingham M.C.C.

A general meeting will be held on Friday, February 24th, at 7.30 p.m., at headquarters, King's Head Hotel, Hagley Road, Edgbaston. Agenda: Election of officers and committee; fixtures for the coming year. Prospective members are cordially invited to attend.

### Bristol M.C. and L.C.C.

In spite of pouring rain, some forty members visited their neighbours at Bath on Saturday, February 4th. Tea at the Bath headquarters and a visit to the theatre, followed by supper and a late return journey, made up a very successful social event; the return event is billed at Bristol on the 18th.

### Blyth and District M.C.

The club held its first annual masquerade ball early in February in the Mechanics' Hall. There were about 120 present, and great success has attended the efforts of the officials. During the winter months there has been a series of whist drives and dances held for the purpose of swelling the funds of the club.

### Gloucester M.C. and L.C.C.

At the annual general meeting held on January 31st (at the Spread Eagle Hotel, Gloucester), the following officers were duly elected: Pres., Rev. C. E. Kingsford, M.A.; vice-pres., Mr. B. F. Peplow: hon. treas., Mr. J. H. A'Bear; capt. (Thursday), Mr. O. E. Blackwell; capt. (Saturday), Mr. R. Purnell; trials hon. sec., Mr. J. Boakes; sec. of awards, Mr. A. W. Cooper; hon. sec., Mr. F. R. Ware, St. Sidwell's, Tuffley Avenue, Gloucester.

### Woolwich, Plumstead, and District M.C.C.

Great interest will be attached to the Woolwich Club's opening fixture—the Captain's "surprise run" on March 12th from country headquarters, Green Street Green. They will be piloted to a newly discovered hill—more severe than any of the known Kent hills. Only one solo machine—a Triumph—has made the climb so far. All passenger machine attempts have failed. At the annual general meeting it was decided to support the proposed end-to-end trial and to promote eight monthly members' competitions. Each member of the committee of eight will be responsible for a competition.

# Keep within the law!

"Silence is Golden"

Adaptable to any H.P. Motor Cycle. Send us outside diameter of the Exhaust Pipe.

## The "ARGUS" SILENCER for open exhaust pipes.

THE patent silencer is made of aluminium, on account of its lightness and heat dispersing qualities.
DELIVERIES can be made 7 days from receipt of order.
Full satisfaction guaranteed or money returned.
An efficient silencer incurring the slightest possible loss of power.

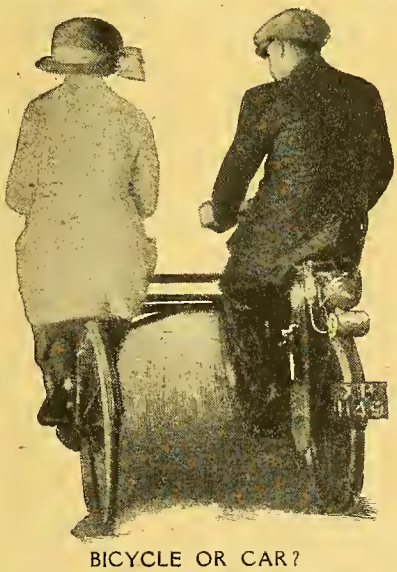
## A STRIKING TESTIMONY.

ECONOMICAL MOTORING FOR TWO.

Sir,—I enclose a photograph which may be of interest to your readers. I think I can claim that it is the only "combination" of this kind on the road. The gentleman's cycle is the Waltham Engineering Co.'s special cycle with their Young 1¾ h.p. attachment. This is coupled to the lady's cycle with a rigid coupling.

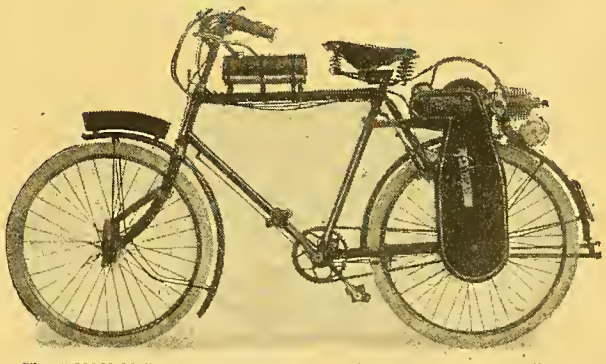
The power of the engine is simply wonderful. I ran it all last season, and have been from London to Brighton and back comfortably in the day. With, of course, pedal assistance, we can get up all but freak hills with ease. On test, with the engine in best form, we have run from Ashtead to Tooting without ever turning the pedals! I suppose that is with about a 20 st. load. It is very cheap to run, and the initial outlay is relatively small.—CLAPHAM, London, S.W.12.



BICYCLE OR CAR?
"CLAPHAM," in the accompanying letter, gives his experiences with these coupled pedal cycles driven by a 1¾ h.p. Young motor attachment.

*—Reprinted from* THE MOTOR CYCLE, Dec. 22, 1921.

# YOUNG MOTOR ATTACHMENT.



The "YOUNG" Motor Attachment as ridden by "CLAPHAM" can be obtained either with or without Cycles from all High Class Agents.

**PRICES.**

The "YOUNG" Motor Attachment, complete with Back Wheel (1¾in.) and Chain Wheel, to fit any ordinary Pedal Cycle (Ladies' or Gents').. **£19 19 0**
Standard Model "YOUNG" Motor Attachment, fitted to W.E.C. Gents' Cycle **£29 17 6.** Ladies' Model **£1** extra.
Model de Luxe (Gents') complete **£33 7 6.** Ladies' Model **£1** extra.
The "YOUNG" Motor Attachment fitted to the W.E.C. Cycle is **Guaranteed.**
(1) To travel 130 miles on a gallon of petrol.
(2) To carry a rider weighing 12 stone up a gradient of 1 in 12 without pedal assistance.
(3) To propel the Cycle at the rate of 25 miles per hour on a level road, and is **WARRANTED FOR 5 YEARS.**

Supplied by Messrs. WHITELEYS', LIMITED, Westbourne Grove.
For **£10** down, and 12 monthly payments of **£1 15s. 2d.** each.

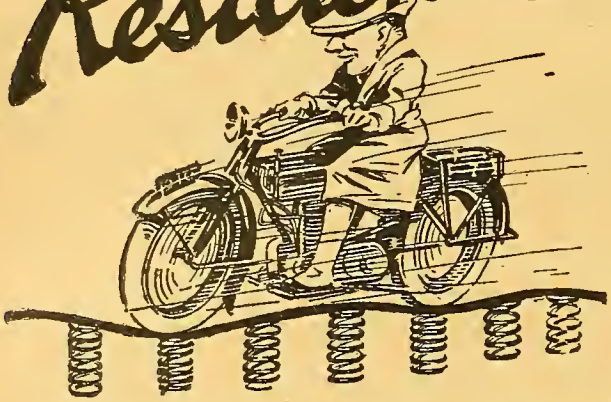
# Resilience



## RIDING ON BATES TYRES IS LIKE RIDING ON SPRINGS

**Bates**

Tyres are made in oversizes as under:—
26 in. × 2½ in. for 2½ in. Rims.
26 in. × 3 in. (or 700 × 80) for 650 × 65 or 26 in. × 3 in. Rims.
27 in. × 3½ in. for 26 in. × 3 in. Rims.
29 in. × 3½ in. for 28 in. × 3 in. Rims.

THIS is an actuality which you can prove for yourself by fitting BATES TYRES on your machine.

The resiliency of BATES Tyres means greater comfort for the rider, and longer life for your machine because of slower depreciation, due to decreased wear and tear on the mechanism.

When ordering, it is always better to fit the largest tyre your rim can take. See list of BATES Oversizes.

**Specify BATES TYRES on your New Mount**

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

**ADVERTISEMENTS** in these columns First 12 words 3/–, and 3d. for every ad- onal word. Paragraphs of under 8 words charged double rate. Each paragraph is irged separately. Name and address must counted. Series discounts, conditions, and cial terms to regular trade advertisers will quoted on application.

Postal Orders and Cheques sent in payment for vertisements should be made payable ——— & Co. ILIFFE & SONS Ltd., and crossed ——— easury Notes, being untraceable if lost in nsit, should not be sent as remittances.

All advertisements in this section should be ompanied with remittance, and be addressed the offices of "The Motor Cycle," Dorset use, Tudor Street, London, E.C.4. To sure insertion letters should be posted in ie to reach the offices of "The Motor Cycle," the first post on Friday morning previous to e day of issue. Advertisements that arrive late for a particular issue or that are owded out will automatically be inserted in following issue unless accompanied by structions to the contrary.

All letters relating to advertisements should ote the number which is printed at the end of h advertisement, and the date of the issue which it appeared.

The proprietors are not responsible for clerical printers' errors, although every care is taken avoid mistakes.

## NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be ressed to numbers at "The Motor Cycle" Office. en this is desired, the sum of 6d. to defray the cost of istration and to cover postage on replies must be added the advertisement charge, which must include the ds Box ooo, c/o "The Motor Cycle." Only the number l appear in the advertisement. All replies should be ressed No. ooo, c/o "The Motor Cycle," Dorset House, dor Street, London, E.C.4. *Readers who reply to Box No. ertisements are warned against sending remittance through post except in registered envelopes; in all such cases the of the Deposit System is recommended, and the envelope uld be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box mber, as it is unusual for these to be sold without first ng inspected by the intending purchaser, advertisers will ilitate business by embodying in their advertisements ae mention of the district in which the machine ered may be seen and tried.

## DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons y deal in perfect safety by availing themselves of our posit System. If the money be deposited with "The tor Cycle," both parties are advised of this receipt. The time allowed for a decision after receipt of the ds is three days, and if a sale is effected we remit the ount to the seller, but, if not, we return the amount the depositor. Carriage is to be paid by the buyer, but the event of no sale each party pays carriage one way e seller takes the risk of damage in transit. For all nsactions up to £10, a deposit fee of 1/- is charged; on nsactions over £10 and under £50, the fee is 2/6; over 0 and under £75, 5/-; over £75 and under £100, 7/6 d on all transactions over £100, 1%. All deposit tters are dealt with at Dorset House, Tudor Street, ndon, E.C.4, and cheques and money orders should be de payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an lication that the advertiser is willing to avail himself of Deposit System. Other advertisers may be equally irous, but have not advised us to that effect.

## SPECIAL NOTE.

Readers who reply to advertisements and receive no swer to their enquiries are requested to regard the nce as an indication that the goods advertised have eady been disposed of. Advertisers often receive so ny enquiries that it is quite impossible to reply to h one by post.

## This Real Value-for-Money Proposition ?

We challenge anyone to produce a finer.

The proposition is the Burlington Reconstructed 4 h.p. Douglas Combination. Although referred to as Reconstructed, these machines are mainly composed of new parts and neither in appearance nor service do they differ from absolutely new models.

Compare their price (below £100)—compare their quality—you cannot find a better bargain on the market to-day.

**FULLY GUARANTEED**
**FULLY EQUIPPED**

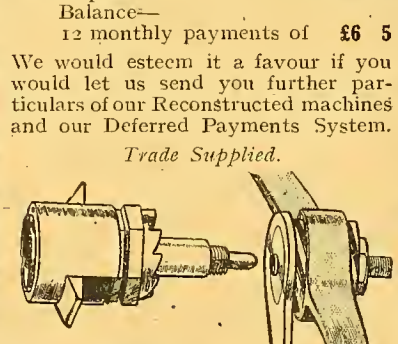
## CASH PRICE 93 GNS.

Above specification also applies to our Reconstructed 2¾ h.p. Douglas models at 55 gns. and 4 h.p. Reconstructed Douglas Solos at 75 gns.

On our Easy Payments Terms it would be: Deposit .. .. .. **£26 10**
Balance—
12 monthly payments of **£6 5**

We would esteem it a favour if you would let us send you further particulars of our Reconstructed machines and our Deferred Payments System.

*Trade Supplied.*



To 4 h.p. Douglas Owners

**No more broken drawbolts**

A new form of operating mechanism for the 4 h.p. Douglas Motor Cycle, by which the Drawbolt is entirely eliminated.

*Write for full particulars.*
*Trade Supplied.*

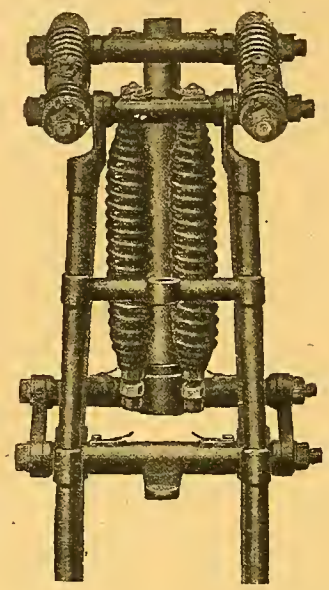
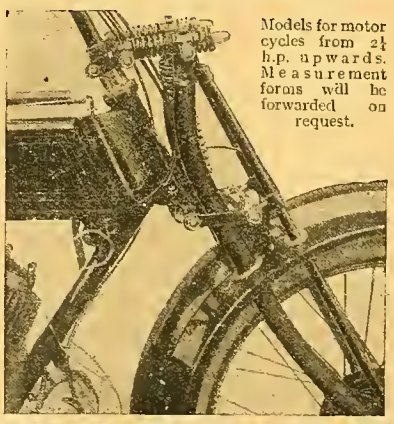
# The BRAMPTON Bi-Flex SPRING FORK.



## An appreciation and a resolution: — *Extract of letter dated 13/1/1922, received from the rider of an 8-h.p. machine fitted with the "BRAMPTON" Bi-Flex Spring Fork.*

"I may say that the Forks are the very finest I have ever ridden on, and I can keep up a higher pace on bad roads than I could on any other machine I have ever tried. When riding with friends, I have many times had to slow down owing to their inability to stand the bad roads, whereas I have considered the going quite comfortable. I shall specify your Forks on whatever machine I go in for next."

## BRAMPTON Bros., Ltd., Oliver Street, BIRMINGHAM.



Models for motor cycles from 2½ h.p. upwards. Measurement forms will be forwarded on request.

**Our unsolicited testimonials should create confidence.**

64, Dorrington Road, Lancaster.
*Feb.* 1, 1922.

Dear Sirs,—Motor House arrived safely and has given every satisfaction.

Yours faithfully,
J. WATTS.

27, Foxley Lane, Purley, Surrey.
*Feb.* 2, 1922.

Gentlemen,—I am very pleased with the Garage you sent me, and think it excellent value for the money.

Yours obediently,
W. GORDON-FOWLER.

"Waverley," Arthog Road, Hale, Cheshire.
*Feb.* 3, 1922.

Dear Sirs, — The "Walton" is to hand, and I need hardly say that the value is exceptional, and am very well pleased.

Yours obediently,
D. M. HANSON.

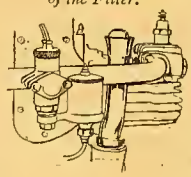
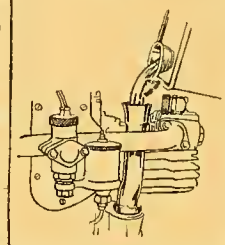
Here is a little convenience that you will all appreciate—a **FUNNEL OIL FILLER AND CRANKCASE COMPRESSION REDUCER.** Can be fitted in three minutes by any novice. Beautifully made in heavy steel, plated fittings, with nipple, union and cap complete, **10/6.** All riders of the 4 h.p. Douglas should have one. If you are not satisfied your money returned.

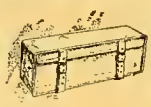


*This shews the fitting of the Filler.*

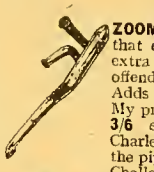


The last drop of oil can be drained out of the can without waste. A combined filler and funnel that makes your oil sump easy to fill—it is quite clean, and being high and compact is out of the dust. It has the advantage of reducing the oil consumption because it lowers the crankcase compression considerably.

**TANKS! TANKS!! TANKS!!!** Strike an individual note, smarten up your Douglas and make it different from the everyday 'bus—here are some of my colour schemes: Lemon with blue panel and blue lines. Brown with chocolate panels, and double gold lines. Lemon with chocolate panels and single chocolate lines. Robin egg blue, with Douglas blue panels and blue lines. Chocolate with gold leaf panels, and white single lines. Black with carmine panels and white lines. Any of the above for 2¾ h.p. or 4 h.p. **£3 15s.** each, or fitted for purchasers of new machines by arrangement. Latest Douglas Instruction Books, **1/6.**



**EXTRA LARGE TOOLBAGS,** metal armoured, two straps and buckles, finest quality for 4 h.p. Douglas. Usual price 20/-. My price **12/6.** Smaller size for 2¾ h.p., two straps and metal covered real leather. List price 11/-. My price **9/-.**



**ZOOM! ZOOM!!** The Exhaust System that everybody is talking about. It gives extra power, has a lovely Zoom note that offends nobody. A real coppersmith's job. Adds £10 to the appearance of any Douglas. My price **30/-** in burnished coppered finish, **3/6** extra in nickel-plated finish. Mr. Charles Stagg, Newport, says: "I received the pipe before the Speed Trial and won the Challenge Cup."

**RADIATED PLUG COOLERS,** beautifully made, worth 4/-, now **2/6.** Write me for anything you want to buy or sell.

**SPECIAL BARREL VALVE SPRINGS** made of cold drawn carbon steel. Unbreakable and very flexible. Touring type **9d.** each, racing type **1/-** each. Any valve spring for any make made to order in a few days.

Now for some of **MY OWN SPECIALITIES. TWIN RINGS,** real power producers, oil savers and compression makers for 2¾ h.p. and 4 h.p. Douglas, 2¾ h.p., **1/6** each; 4 h.p. **1/8** each. Made under a patented process; don't be misled—insist on your agent fitting them.

**ALLOY AIR COOLED VALVE CAPS** for 2¾ h.p. and 4 h.p. Douglas, as fitted by the Grand Prix winners and T.T. riders. The original and best. If they don't stop your engine knocking and prevent overheating, send them back. **4/-** each.

**SPARES** by return. AGENTS—I give big discounts. Official Douglas Agent, A.C.U. Repairer, E.I.C., West of England Service Depot.

*W. G. Coram*

OFFICIAL DOUGLAS AGENT.

**140, VICTORIA STREET, BRISTOL**

*(Late Douglas Motors, Ltd.)* *Tel. 3792*

The man on the spot. I can meet any train and will collect or deliver anything for you. One minute from Temple Meads (Bristol Main) Station.

# PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

# PULLEY

AND GEAR COMBINED.

# Philipson's Latest!

## GOVERNOR PULLEY AND VARIABLE GEAR COMBINED WITH FLY WHEEL for all two-stroke engines.

**The Lightest, Speediest, and Simplest Gear on the market for direct belt-driven 2-stroke and 4-stroke engines.**

ONLY adds 2 lb. (approx.) to the weight of a 2-stroke machine, and 6 lb. (approx.) to the weight of a 4-stroke machine.

**During the past week we have fitted the following machines:**

| 2-stroke. | 4-stroke. |
|---|---|
| LEVIS, | TRIUMPH, |
| O.K., | NORTON, |
| CALTHORPE, | ROVER, |
| VILLIERS, | SINGER, |
| etc. | COULSON-BLACKBURNE |

**We are now in a position to supply the Philipson Pulley to fit J.A.P. engines without any alteration to the machine or "staggering" of the engine.**

Our Flywheel Governor converts a single-speed 2-stroke into a speed model —*the lightest speed model on the market!*

**THE ONLY GEAR WITH NO END THRUST.**

**IMMEDIATE DELIVERY.**

*Send for Illustrated Booklet.*

**No gear box friction.**
**No grinding noises.**
**No wheels or pinions to chew up.**

***What is your make? Write us***

REDUCED PRICE **£7 7 0** Carriage Paid.

**DEFERRED PAYMENT OR EXCHANGES**

Wanted Solos and Combinations, cash waiting.

All machines starred are to be seen at Great Portland Street, the remainder at South Kensington.

## EXCHANGE.

SMALL 1-manual Pipe Organ, value £30; for 1922 touring A.J.S., New Imperial, cash adjustment.—Bateman, Harmondsworth, Middlesex. [8215

DOUGLAS 2¾h.p., all on, good condition, for powerful combination, cash adjustment.—23, Barrett Avenue, Wood Green, N.22. [8687

TRIUMPH, 3-speed, Sturmey hub, 1913, and cash to £30, for best machine or combination offered.—Smith, 35, Kensington Place, W.8. [8382

ALLDAYS 12h.p. 4-seater, dark blue, unscratched, remarkably good condition, value £150; exchanges invited.—63, Solon Rd., Brixton. [8440

EXCHANGE 1920 light car, inspected 53, Kingscourt Rd., Streatham, London, for good combination, or with cash for late Morgan. [8146

EXCHANGE 1918 Powerplus Indian, T.T. bars, special Aero sidecar; for T.T. Rudge or Scott.—Captain Harrison, Rothley, Leicestershire. [8260

EXCHANGE 1922 7h.p. A.J.S. Combination, magnificently equipped, for Triumph combination, or solo and cash.—51, Upper Richmond Rd., Putney. [8933

PERFECT 8-10h.p. Air-cooled Williamson Combination, full equipment, spares for lower power; cash adjustment.—4, Elm Gardens, Brook Green. [8695

EXCHANGE 1917 Calcott, 2-seater, for combination and cash.—Newnham Motor Co., 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [7520

EXCHANGES a Speciality!!! 2- and 4-seater cars from £50 to £500!—Seabridge, 35, Hansler Rd., East Dulwich. Call, write, or 'phone, Sydenham 2452. [7939

EXCHANGES or Offers invited for the following 1921 new machines: B.S.A., Beardmore, New Imperial, Levis.—S. E. Porter and Co., Whitchurch, Salop. [8119

1914 G.N. Cyclecar, in very good order, aluminium body; exchange for motor cycle or combination, Scott preferred.—Johnson, 29, Austerby, Bourne, Lincs. [8205

NORTON 1921 Sports Model, close ratio gear box Ricardo piston, perfect order, tax paid; £95, or lightweight part exchange.—Box 8662, c/o *The Motor Cycle.* [8248

EXCHANGE Flanders Small 4-seater, 5 lamps, horn, front and rear windscreens, overhauled and painted, for combination, or sell £70.—6, Albert Rd., Peckham. [8110

EXCHANGE Conjuring Tricks and Illusions (professional apparatus), for motor cycle, combination, or cash.—Write, for particulars, Box 8634, c/o *The Motor Cycle.* [8199

F.O.C.H. are noted for fair exchanges.—Fair Offer Car House, 5, Heath St., Hampstead. (Near Tube.) 'Phone, Hampstead 3752. Hours 9-7, including Saturdays. [8325

EXCHANGE brand new 1922 8h.p. Rover, 2-seater, for combination or Morgan and cash.—Newnham Motor Co., 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [7517

6h.p. Rudge-Multi Combination 1916-17, overhauled, equipped, spares, excellent, guarantee given; sell or accept solo and cash adjustment.—43, South St., Ponders End, N. [8475

1921 8h.p. Solo Williamson-Jap, all-chain, Sturmey, oversize Dunlops, small mileage; for 1921 chain B.S.A. or Sunbeam single.—26, Ripon Gardens, Newcastle-on-Tyne. [8183

EXCHANGE brand new 1922 Coventry Premier, 4-wheeler, for combination and cash.—Newnham Motor Co., 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [7518

HENDERSON Combination, bought April, 1921, lavishly equipped, dynamo lighting, cost £300; for Coventry Premier 3-wheeler.—6, Eridge Rd., Bedford Park, W.4. [8254

EXCHANGE Ford Tonner 1918, tax paid, excellent order throughout, for combination, solo, or 3-wheeler, cash adjustment.—Merry, 168, Wellington Rd, South, Hounslow. [8627

EXCHANGE 1921 (July) 2¾h.p. Douglas and 16ft. Canadian canoe, as new, cost £35; for 1921 combination, or offers invited for either.—3, College Court, Hammersmith. [8218

1916 3½h.p. Sports Brough, 2-speed, discs, best lamps, very fast (winner competition), for Douglas, Levis, or good 2-stroke and little cash.—7, St. Mark's Mansions, N.4. [8452

EXCHANGE New Hudson, 2¾h.p. J.A.P. engine, 3-speed, clutch, lamps, etc., for screw-cutting lathe or gas engine and cash; sell £22.—Brown, 71, Twilley St., Wandsworth, S.W.18. [8916

EXCHANGE 1920 4h.p. Campion Combination, tax paid, electric light, Easting, speedometer, etc., excellent condition, for higher power, or sell £100.—Dickinson, Chemist, Stamford. (D) [8847

WILLIAMSON New Radiator, water-cooled cylinders and pistons, water-pipes; exchange air-cooled ditto and cash, or accessories to value.—19, James Terrace, Wallsend-on-Tyne. [8285

## EXCHANGE.

EXCHANGE 1914 Standard, dynamo lighting, and thoroughly overhauled, for good combination and cash.—Newnham Motor Co., 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [7521

CARDEN A.V. type Monocar, 1914-15, 5-6h.p. J.A.P., sporty, tuned for speed, 4 lamps, horn, tax paid; exchange Douglas, Rudge, Scott; Zenith preferred.—152, Peckham Park Rd., S.E.15. [8369

WANTED, 1921 8h.p. Sports Matchless Combination; exchange late 1920 4h.p. Triumph Combination, specially built sidecar; cash adjustment.—Letters, D. Woolf, 27, Hoxton St., London, N.1. [8151

MORGAN DE LUXE, 1917, engine just overhauled, splendid condition, many spares, fully equipped, trial; for solo or combination, cash adjustment.—Smith, 37, Revelstoke Rd., Wimbledon Park, London. [8256

EXCHANGE 1921 8h.p. Zenith, clutch, combination, Magdyno, for 1921 Big Four Norton combination, Magdyno, equipped, or cash adjustment.—Write, Pollard, "Shanklin," The Avenue, Chingford, Essex. [8657

EXCHANGE 1919 Rudge-Multi, touring model, perfect condition throughout, for 3-speed Indian, 7-9h.p., Powerplus preferred, in same condition.—Langford's, 37, Cricklewood Broadway, N.W.2. 'Phone, Hampstead 8616. [8523

AGENTS.—Best exchange proposition accepted by owner 1921 American Ace, Swan sports sidecar, for 8h.p. Brough Superior or 1922 Henderson combination; machine garaged near London.—Box 8605, c/o *The Motor Cycle*. [8133

EXCHANGES.—We will allow you highest market value for your present cycle in part exchange for either a new or second-hand machine; any make supplied.—R. Bamber and Co., Ltd., 2, Eastbank St., Southport. 'Phone: 607. [7241

EXCHANGES.—The Newnham Motor Co. have specialised in motor exchanges for several years, and can offer best prices for secondhand cars or motor cycles in part payment for new or later models. Cash either way. Distance no object. Exchanges arranged by post. All makes supplied.—Newnham Motor Co., 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [7516

## REPAIRERS.

ANY

ARMSTRONG or Sturmey-Archer Gears Repaired promptly and efficiently.—County Engineering Co., Hounslow. [0517

C. R. FOSTER, of Leeds, is the original cylinder grinding specialist.

CYLINDER Grinding by Foster, of Leeds, has no equal. Price, complete with piston, from £2.

£1,000 is the value of the machine and equipment that will grind your cylinder at our works.—Foster, of Leeds, 170, Cardigan Rd. [0003

ENGINE Overhauls, quality work only, cylinders reground, pistons, valves, bushes, etc.—Below.

PISTONS for every standard motor cycle in stock from 14/- each.—Below.

CYLINDER Grinding, our speciality 2¾h.p. Douglas reground, fitted with new piston, rings, and gudgeon, 25/- each.—Below.

TRIUMPH, J.A.P., Bradbury, and all 3½h.p., 4h.p., cylinders reground and fitted new piston, rings, and gudgeon, 35/-; returned in 48 hours.—Below.

QUALITY and Satisfaction is our motto. Entrust your work to specialists and get a guaranteed repair. — C.M.D. Engineering Co., Leamington Spa. 'Phone: 768. [9659

ENAMELLING, plating tanks; from 6/-.—Send to Fisher, Works, 111, Harnall Lane, East Coventry. [8158

REPAIRS and renovations to motor cycles, any make.—Swift Repair Works, 133, Long Acre, W.C. [0796

WELDING Aluminium Crank Cases, gear boxes by experts; immediate attention; sensonable prices.—Below.

WELDING Broken Cylinders, flanges, combustion experts of 11 years' experience.—Below.

CYLINDER Grinding on latest machinery, installed since hostilities ceased; accuracy guaranteed; new pistons fitted.—Sadgrove and Co., 140, Conybere St. Birmingham. [4769

FRAME and Chassis repairs, alterations, etc.; we are specialists and sidecar makers; reasonable charges.—Below.

ENGINES overhauled, rebushed; singles 35/-, twins 45/-. Try us for anything motorish.—Henry V. Smith, Osmondthorpe Lane, Leeds. [7561

ENGINES rebushed, spindles, etc.; parts made to pattern or sketch.—Mallin Milbourne, Queen St., Romford. [7771

INDIAN Owners.—If you have trouble with your machine, send to Indian repair specialists, Dennis, 89 Brixton Rd London [1853

FRAME Repair Specialists.—New tubes, forks, stays, cut-downs, etc.; enamelling and plating at lowest prices; quick despatch.—A. E. and F. Brittain, Bentley Lane, Walsall. [2622

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

**IMPORTANT AGENCY EXTENSION**

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

WRITE TO-DAY FOR FULL PARTICULARS.

Address—Agency Dept.,

**The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED**

Head Office:

**77, Cheapside, London, E.C.2.**

*Telephone: City 9831 and 9832.*

*Telegrams: "Autoinsure, Cent. London."*

## REPAIRERS.

ENGINES Rebushed, Overhauled, rings fitted, compression guaranteed; singles, 30/-; twins, 40/-; returned 3 days.—Below.

CYLINDERS Rebored, new pistons fitted, 30/- to 40/-; piston slots recut, complete with ring, 3/- each.—Turner Bros., Motor Engineers, Summerseat, Manchester. [7193

ARMSTRONG and Sturmey-Archer Gear Repairs and replacements; all parts supplied from stock.—Tavistock, below.

ARMSTRONG and Sturmey-Archer Gears repaired while you wait.—Tavistock, below.

GEARS.—Any type of gear boxes or gear replacements made to pattern or drawing at competitive prices.—Tavistock, below.

KINDLY Note our new address.—Tavistock Engineering Co., 9, Johnson St., Notting Hill Gate. [8589

STURMEY and Armstrong gears repaired or parts supplied promptly.—Cherry Lane Garage, Lymm, Cheshire. [8885

STOVE Enamelling.—Frames, 9/-; wheels, 9/-; tanks, makers' colours; plating.—De la Cour, 298, Kennington Rd., S.E.11. [8705

FRAME, chassis, and tank repairs, enamelling and painting by experts; prompt deliveries.—Loughan Co., Fitzroy St., Leicester. [6097

PISTONS, Aluminium, cast iron, steel; cylinder grinding; engines overhauled.—Birmingham Piston Mfg. Co., 173, Newtown Row. [8683

J.A.P. and Blackburne Engine Experts; reasonable and reliable.—Kingsbury Garage, Edgware Rd., Hendon. 'Phone: Kingsbury 134. [4209

HENDERSON Specialist repairs and overhauls, 12 years' experience with leading makes.—Mardon, 13, Shirlock Rd., Hampstead, N.W. [8209

ROC 2-speed Overhauls; Humber, Rex, V.S., Campion, Alldays; all repairs guaranteed; spares stocked.—Connolly, Carmelite Rd., Coventry. [8989

WELDING.—Broken cylinders, crank cases, etc., made like new; work guaranteed; quick return.—Tonge Welding Co., Morton St., Middleton, Manchester. [8550

ENAMELLING, Plating.—Tanks enamelled as before handle-bars, etc., plated.—Send to Murray's Plating Works, Union St., Coventry. Platers and enamellers to the trade. [0024

CYLINDER Grinding, new pistons, etc., fitted; satisfaction guaranteed; lowest prices.—Ford Welding and Engineering Co., Ltd., The Tunnel, Queen St., Cardiff. [7269

CYLINDER Grinding, new pistons, etc.; accurate and highly finished work; prompt delivery; price list on application.—W. and F. Wills, Ltd., Engineers, Bridgwater. [0728

SPEEDOMETER Experts.—Repairs to all makes; Stewart repairs a speciality. New and second-hand sets in stock.—London Speedometer Co., Kramer Mews, Earl's Court. [4043

FRAMES.—Repairs and alterations; special frames and tanks built, any design; enamelling and plating.—A. Pilkington and Co., 390, Lichfield Rd., Birmingham. [8811

ALUMINALLOY Pistons.—Our pistons signalise efficiency for 20,000 miles. Cylinders ground, pistons fitted. Trade supplied.—Commercial Engineering, South St., Keighley. [3937

CYLINDER Grinding, new pistons, rings, and gudgeons, 85 mm. J.A.P.'s, etc., 29/6; other sizes on request. Aluminium pistons if desired.—Vulcan Engineering Works, Wilsden. [9642

WELDING.—Broken flanges, aluminium crank cases, cracked water jeckets, valve seatings, welded and machined complete; scored bores filled in and ground to existing pistons.—Below.

CYLINDERS Reground, new pistons fitted complete in cast iron or aluminium.—West London Welding Co., Essex Place, Chiswick. 'Phone: Chiswick 536. [0415

COULSON Repair Specialists. Spares for all models stocked. Trade inquiries invited. Tube bending, welding, brazing, and enamelling.—H.W.H. Engineering Co., 40, Old Town, Clapham, S.W.4. [2537

CYLINDERS Reground, accurate finish, compression guaranteed; Triumph, Rover, Premier, 35/-; 2¾h.p. Douglas, 25/-; 70 mm. bores, 30/-; rings and gudgeons complete, twins low price.—Below.

PISTONS, all patterns, oversize specialists, low price.—Below.

PISTON Rings, oversize or slip-cut, 2/-; standard, 1/6; return post; none better. Thousands of testimonials.—Patent Rings, 30, Wigan Rd., Atherton. [5136

TRIUMPH Cylinders reground and fitted with genuine Triumph oversize pistons, complete with rings and gudgeon; 40/-; J.A.P., Rover, B.S.A., etc., same price; compression and accuracy guaranteed.—Below.

WE specialise on engines, complete overhauls, any part made to pattern or drawing, accurate work only; no waiting.—Harvey and Co., 47, South Lambeth Rd., S.W.8, near Vauxhall Station. [0793

## Despite Disabilities.

IN our last issue a letter of more than ordinary interest appeared under the sectional heading of "Readers' Replies" on our "Questions and Replies" pages. It was a note of encouragement and advice from one disabled rider to another who recently sought for a machine which would suit the requirements of a man who had had the misfortune to lose both his legs.

The letter described how the writer, an official in a North of England club, had competed with success on his sidecar outfit in a number of events, despite the handicap imposed by the fact that he lost both legs sixteen years ago, and has since had to depend upon artificial limbs. Such an example of triumphing over physical difficulties is by no means isolated, as we are aware, but it is only when special circumstances arise that a case is brought to public notice.

During the interval since the war there must be many men who have had the misfortune to lose a limb who otherwise have now fully recovered their normal health and strength; where the disability has affected the lower limbs a wide field of activity becomes impossible, yet, to an ordinarily active man nothing is more limiting and cramping in outlook than confinement to a restricted area within his own district. It is in such cases where the sidecar or small runabout will provide the means of locomotion—independent and always available—which the disabled man has lost. It is, moreover, in cases such as that referred to above, wherein those who have suffered similar losses may find the inspiration that will lead to their regaining an equality in an active sport which will allow them to compete with, and even excel, their more fortunate fellows despite seemingly insuperable drawbacks. Regarded practically, of course, a single track machine cannot be recommended in such circumstances (although we know of many instances where a solo mount is ridden successfully). The risks, however, are too great, and a machine which is in stable equilibrium when at rest should certainly be selected.

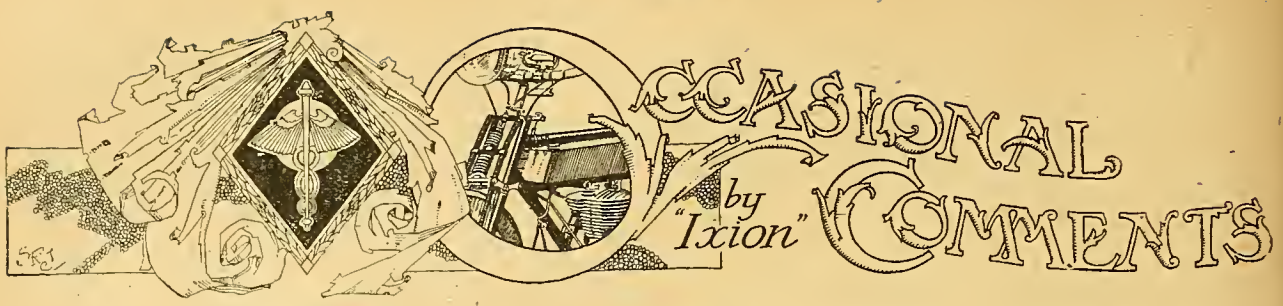
## Freak Trials and the Second-hand Market.

ARISING from an article a few weeks ago by an enthusiastic supporter of the ultra-sporting or freak trial, there has been considerable correspondence from our readers on this subject, mainly, however, disagreeing with the views of the first writer. It has been said, for example, that using a good machine in some of these events is analogous to galloping across a boulder-strewn seashore with a hunter, and subjecting a good motor cycle to unnecessary abuse. That may be so; but the broken leg of a horse, a likely occurrence under the circumstances, cannot readily be replaced, and even if repairable inevitably causes pain to the animal; on the other hand, the damage usually accruing to a motor cycle in consequence of completing a "colonial" trial's course is seldom really vital, and in the case of the sturdiest and best machines rarely amounts to more than kinks in the rims or bent foot-rests.

Modern motor cycles have reached the stage where they can withstand a considerable amount of rough riding without receiving even a trace of lasting damage, although naturally this applies more indubitably to the premier medium- and heavy-weights.

Therefore we emphatically do not agree with the further complaint that trials of to-day have a most detrimental effect on second-hand prices. The keen amateur trials rider is usually just the type of man who takes the greatest care of his mount from a mechanical standpoint, and maintains it in its best possible running order.

An index to the advertisements in this issue will be found on the page facing the back cover



### Good Plating.

THERE is plating and plating. I took out a new machine in a drizzle the other night and found, next morning, that lots of the small plated screws securing mudguards and such like were bright orange. But the nickelling on the old 1911 Lucas head lamp, which has covered many thousands of miles and also spent months lying idle in damp garages, is still white and free from pitting or brown patches. In fact, its finish has worn better than the black—doubtless an oxide process—applied to the body of the lamp and the handle-bar clips. These are less smart than the plating, and even shaded with mild rust in certain places, so that I gave them all a coat of quick-drying black before restoring them to commission. The aforesaid orange screws have since been cleaned, doped with Corrosine, and rained upon once more. They have given the dope best, and to-night look quite white if a shade duller than factory polish. Incidentally I found that one tin of Corrosine sufficed for the whole of the machine, over-bespangled with nickel as it was, with the sole exception of the spokes, which for the moment are merely greased.

### Deposit Against Spares.

I ALWAYS thought that depositing a fiver at the factory so as to ensure prompt attention to telegraphic wails for spare parts was a stunt which many catalogues prate of, but no rider actually performs. This week I met in the flesh an owner who keeps £5 on permanent deposit at the factory stores. The habit has not been greatly advertised of late, and readers who are temperamentally nervous and prudent may like to be reminded that most manufacturers welcome such deposits. I am sure I should, if I were a manufacturer, and all my clients indulged in it.

### My Gas-Electric Headlamp.

SEVERAL readers want to know what sort of a light I get from the cunning Siemens gadget which I mentioned recently—an electric bulb clipped to the burner support of an acetylene head lamp and fed by a dry battery. I do not know whether it is fair to answer, as much must obviously depend upon the focus and the reflector. The gas lamp in question chances to be a very ancient Lucas, dating from about 1911, and was never a great light giver in its palmiest days. Its illumination with the Siemens miniature opal bulb is very curious. A very narrow shaft of quite intense light is thrown a long way—approximately 250ft.; the shaft is very narrow, and there is practically no diffusion of any width close up to the lamp. Quite a different effect would naturally be obtained with other foci and reflectors, but this ray suits me quite well for occasional short-distance work on a fast machine, and I shall not bother to make the focus adjustable or to try a better head lamp. Another reader wishes to know how I lead the wires out of the lamp. I took a hammer and chisel and knocked out some of the ventilating perforations in the base of the lamp shell, padding the wires with insulating tape to fill the hole snugly.

### Oil for the Season.

CLUBS, pubs., and Press are full of complaints about the difficulty of getting a thick oil through a small pipe on a cold day. On which grievances I have four remarks to make. The first is that there is no apparent reason why our oil passages should be so microscopic, and that the cost of our machines would not be perceptibly increased if these passages were enlarged. The second is that our British climate is as capricious as a cinema star (female gender); there comes a premature spell of spring, and we fill our tanks with BB; then a polar frost begins, and a thin oil will not flow. Moral, go by the calendar rather than the feel of the air. The third remark is that it is silly to slop a quart of Vacuum A into the tank on the top of an inch of thick sludge which has accumulated during the summer. The sludge is the first to quit the tank for the pipe, and of course it immediately waxifies. Moral, cleanse all the thick stuff out of the tank and pipes before replenishing with winter oil. Lastly, some roughriders lag their oilpipes from October till March—it is the 2ft. of exposed $\frac{3}{16}$in. pipe which creates the trouble, rather than the tank or the pump.

### Progress.

EXAMINING a Villiers-engined machine this week, I fell to thinking of the vast strides which the babies have made since pre-war days. At that era I owned a single-geared two-stroke, minus clutch, with gas lamps and a belt drive which was fertile in trouble. But the 1922 sample had a weather-proof drive (chain-cum-belt), a flywheel magneto which sparked furiously at absurdly low speeds, a complete electric lighting set which was listed as a £4 10s. extra, including two good lamps, a three-speed gear, and a clutch so efficient that it could be used as recklessly as any car clutch, and rendered a kick-starter quite unnecessary. On the top of that the engine seemed to two-stroke down to as low a speed as the owner could balance at. I do not wonder that such

**Occasional Comments.—**

layouts are becoming very popular for really hard work. And the price is absurdly low considering how little money is worth nowadays. The combined ignition-cum-lighting flywheel unit is bound to boom; it represents an increase in efficiency and luxury at a saving in cost, a combination which is extremely rare.

## The "Properprop."

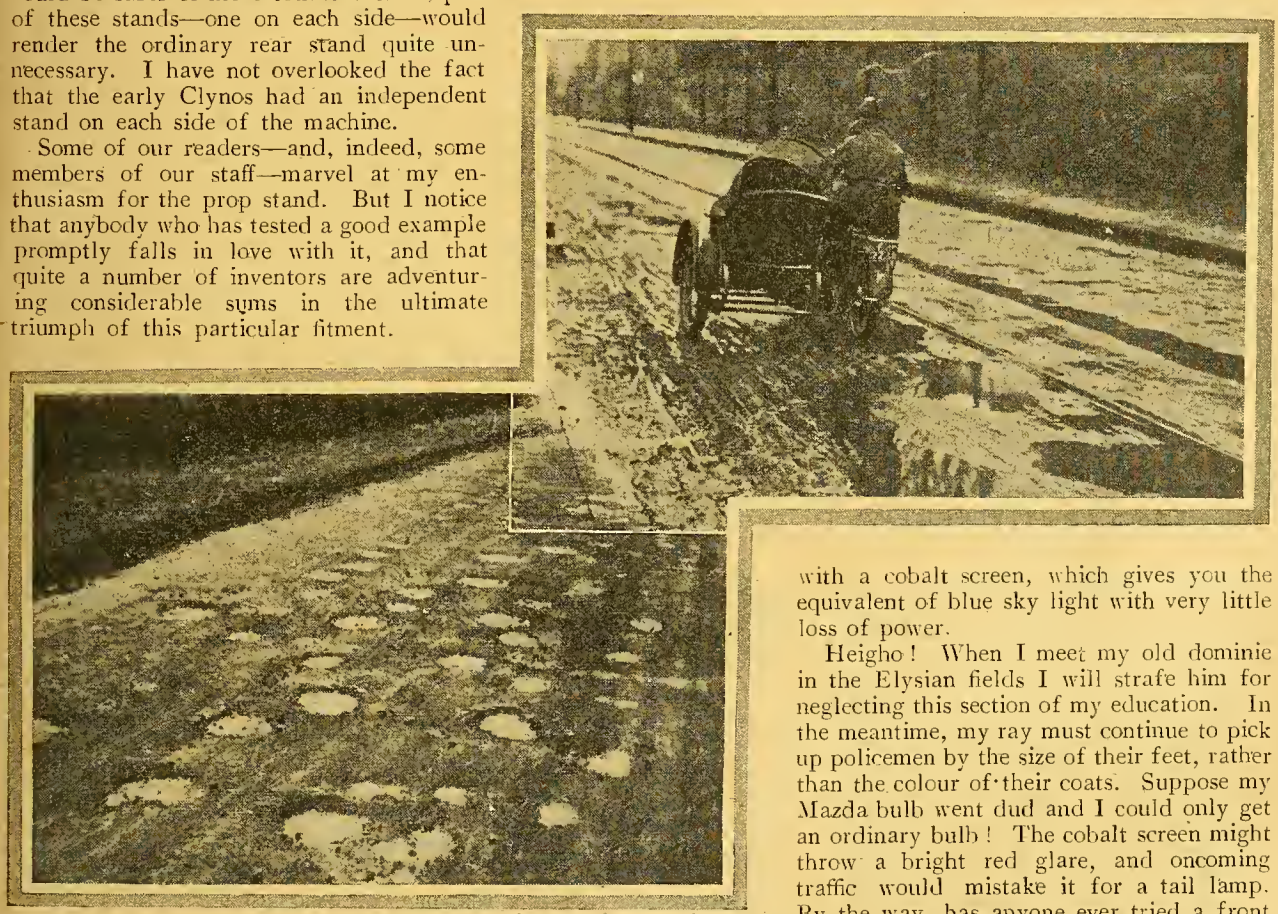
I APOLOGISE for the nomenclature, for which I bear no responsibility. Two Blackburn gentlemen are answerable for the latest prop stand, which is patented and goes into mass production next week. It differs from the other types which I have described, for when out of action its leg is contained in a casing which projects upwards from the footboard or rest, as the case may be. When the rider stops, he pushes down a small trigger with his toe, and as the leg is toothed along one edge the effective reach of the stand can be varied to suit road cambers or rough ground; the foot of the leg is shaped to bite on any surface. When he wants to remount, he touches off another trigger, and a concealed spring shoots the leg back into its casing again. Nothing could be safer or more convenient. A pair of these stands—one on each side—would render the ordinary rear stand quite unnecessary. I have not overlooked the fact that the early Clynos had an independent stand on each side of the machine.

Some of our readers—and, indeed, some members of our staff—marvel at my enthusiasm for the prop stand. But I notice that anybody who has tested a good example promptly falls in love with it, and that quite a number of inventors are adventuring considerable sums in the ultimate triumph of this particular fitment.

## Orthochromatic Lamps.

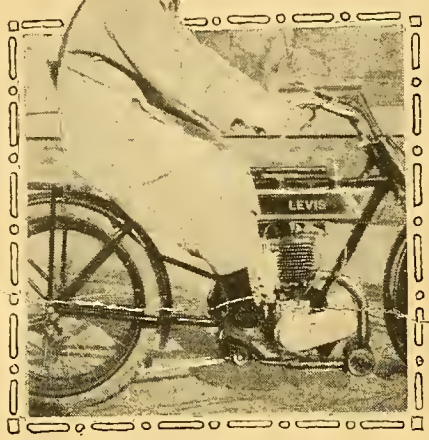
MY complaint about the failure of our head lamps to distinguish *colour* values, thus forcing us to pick out objects at night purely by their *form*, has brought me one letter. I am glad there was only one answer. The learned writer thereof has used for years a Wratten and Wainwright "acetylene daylight" screen. Our lamps destroy colour values because acetylene flame contains far too much red light, and far too little blue. The screen corrects this, but weakens the beam by killing the surplus red. To get good results with this filter, the ordinary reflector may need re-silvering with good silver and good backing. Commercial reflectors are often cheaply silvered, which implies a blue reflection liable to deteriorate rapidly, and a red reflection which is apt to increase. But with a good reflector this filter gives a good imitation of noon daylight. Electric lamps vary so enormously in all the vital factors that it is impossible to market a filter which will prove serviceable with any lamp bought at random, and correct colour values can only be hoped for when the lamp-maker provides a filter suited to his own equipment. The one exception, according to my tame professor, is a Mazda lamp with a cobalt screen, which gives you the equivalent of blue sky light with very little loss of power.

Heigho! When I meet my old dominie in the Elysian fields I will strafe him for neglecting this section of my education. In the meantime, my ray must continue to pick up policemen by the size of their feet, rather than the colour of their coats. Suppose my Mazda bulb went dud and I could only get an ordinary bulb! The cobalt screen might throw a bright red glare, and oncoming traffic would mistake it for a tail lamp. By the way, has anyone ever tried a front glass with camouflage colours and a jazz pattern? The roads depicted on this page would look really effective under such conditions.

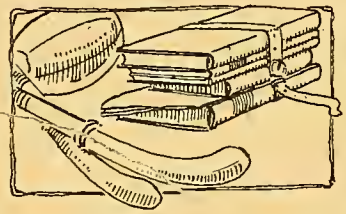


Gloucester motor cyclists are up in arms against the highway authorities in consequence of the atrocious state of the highways—and no wonder. The illustration on the left is not a French shell-spattered road but part of the Cheltenham-Stroud highway. On the right is a section of the main London road within two miles of Gloucester.

# Motor Cycles for Boys and Girls



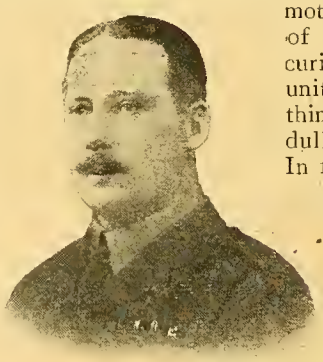
A Plea for the Youthful Motor Cyclist. Development of the Young Mind and the Training of Temperament.



By Lt.-Col. F. S. BRERETON, C.B.E.

*In his article the talented author, known in our schooldays as Captain Brereton, whose books of adventure we so often enjoyed, encourages motor cycling among schoolboys and schoolgirls. The popular chairman of the Auto Cycle Union, Col. Brereton wrote the Medical History of the Great War and with his own hand constructed many interesting models of field dressing stations and sections of dug-outs for the Imperial War Museum. He is still an active motor cyclist.*

THE law states quite definitely that a licence to drive a motor-propelled bicycle may be issued to any individual who shall have attained the age of fourteen years. Yet the same law does not differentiate between this young person and toothless, tottering old age, nor between the degenerate, the mentally unsound, the blind, the deaf, and the hopeless cripple. It may, therefore, be quite reasonably assumed that the Law—itself termed a "hass"—has very carefully refrained from admitting that because a licence to drive a motor bicycle is issuable at the age of fourteen, therefore, as a natural sequence, as it were, the individual of fourteen, male or female, is fitted so to drive, and is an absolutely responsible person.



Lt.-Col. F. S. Brereton, C.B.E.

How many boys of fourteen are actually capable of handling a machine at the legal age for licensing? I submit that quite a considerable number are capable—many more, in fact, than are generally credited. And, further, I venture to state that the ownership of a motor cycle—preferably of the small lightweight type—provides at once a healthy stimulus to the boy or girl of fourteen, whereby much that is desirable in youth—care, discrimination, thoughtfulness, a keen eye for detail, the faculty of observation, good temper, judgment, and pluck—is encouraged and developed in a manner far more natural than under many other conditions.

Think of the joy of anticipation of ownership! The need in the first place to discover the nomenclature of the hundred and one parts and gadgets which go to make up that somewhat complicated machine—the motor bicycle. It must sharpen the wits of any youngster and inflame his natural curiosity when accosted with a modern power unit, while the desire to comprehend everything connected with it will make even a dull and somewhat stupid fellow liven up. In fact, he will have to brighten up considerably if, as is rare in these days, when the nursery is incomplete without its engineering toys, he reaches the age of fourteen still ignorant of the many contraptions about a motor machine.

There will be the need to master the difference between two- and four-stroke, and perhaps friendly, if heated, debates with pals, as to the superiority of either. The rival claims of chain or belt drive or chain-cum-belt will require investigation, and who is going to decide for the would-be owner as to lubrication?

### Every Boy Mechanically Minded.

It is a foregone conclusion that any youngster not attracted by machinery is sick, or dull, or unusually constructed. The vast majority of the rising generation appear to be indubitably inclined towards mechanics, to be, in fact, what is generally termed mechanically minded, and the motor bicycle—a much

**Motor Cycles for Boys and Girls.—**

handy, inexpensive machine—provides a means whereby that mechanical inclination may be developed along correct paths towards that fuller and more complete understanding which is desirable in the adult. It goes without saying that the pros and cons of forced lubrication, as compared with splash lubrication, must engender the faculty of consideration. The fact that the charge is fired by so small and inconspicuous an object as the modern magneto is certain to demand from any healthy youngster an intimate inquiry.

Frame construction may not appeal so much at first, but sooner or later the proud owner of a motor cycle will become caught up in the whirl of argument which screeches about the subject of spring suspension, will think about it and study it, and before long this new recruit to the motor cycle movement will be laying down the law as to such-and-such forks, and eagerly discussing the subject of a new form of rear suspension.

### Educational Influence.

Does all this mean simply nothing? Is the opportunity provided by the motor bicycle to be considered by parents and masters alike as incomparable in value with the monotony of lessons in form time, and the opportunities of attaining to a smattering of mechanical processes as provided in the average school workshop? I once put the question to an eminent schoolmaster, who has never ridden a motor bicycle solo, does not know of the delights of the road, but admits to once having driven a sidecar outfit, and to have found himself " piled up," to use an Americanism, upon a roadside bank with the machine—a wreck—on top of him. Incidentally, he did not tell me who, or what, he carried in his sidecar or what happened to this, and with some knowledge of my many friends who own this class of outfit, and of their passengers, I studiously refrained from pressing the question. He stoutly declaimed at the idea of providing a youngster of fourteen with a motor bicycle :

" Sheer madness ! A kill or cure process ! " is his considered opinion.

But is it a kill or cure process? I have endeavoured to show that the possible, or actual, possession of a motor bicycle cannot fail to stimulate mechanical enthusiasm in the mind of any boy or girl. But I have by no means exhausted the list of desirable qualities which such possession may stimulate and bring into being.

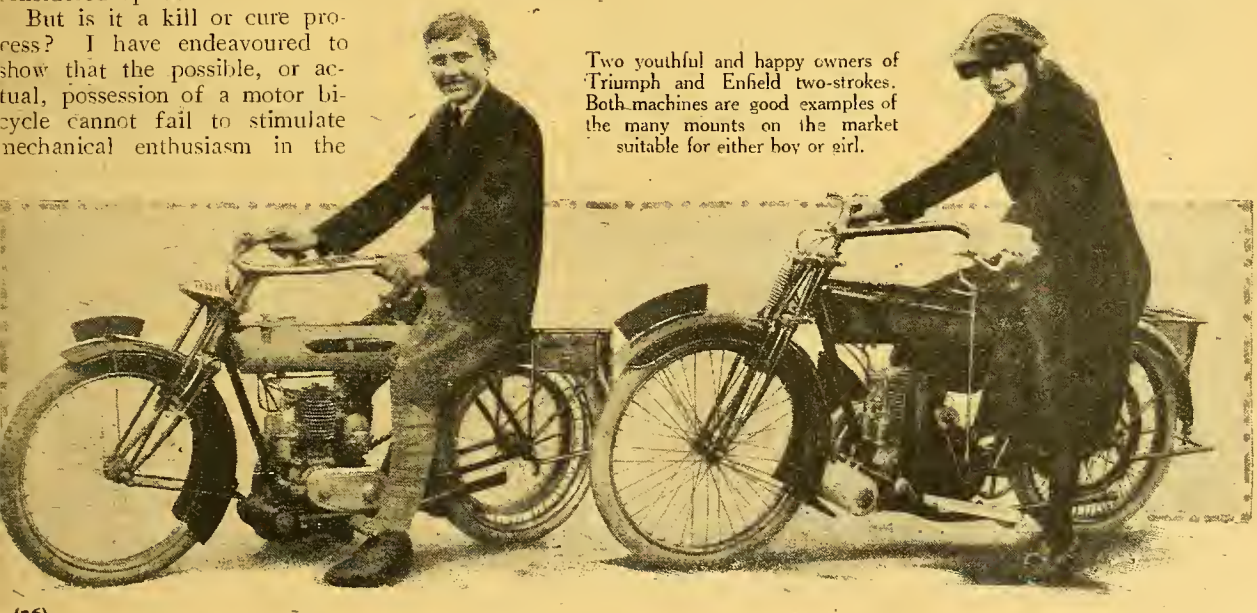
### Training Temperament.

Good temper, for example, is an absolute essential, otherwise we should have dejected and exasperated youngsters throwing their machines into the ditch or battering them to pieces with the hammer ; good temper to face breakdowns, inevitable punctures, those mysterious happenings to the carburetter which arrest progress, and those still more mysterious disabilities to which a magneto is occasionally prone. Without good temper, no one can settle to the often exacting task of discovering the cause of the trouble ; the need for differential diagnosis between this and that is absolutely the high road to the attainment of that valuable faculty of deduction which is one of the stepping-stones to success in life ; and if you banish all the other characteristics which every proud father would like to see in his offspring, there still comes the other side of the question, the health and strength side.

### Health and the Motor Cycle.

No motor cyclist who cares to cast his eye over these lines will dare to suggest that health is not one of the great attributes of the motor cycle. For the open road calls him, the clear fresh air swishes by him as he spins along. Of course there is dust, of course there is noise and grease, but there is sun and wind and rain ; and it all calls for the exercise of those qualities of endurance which we value so highly, while the need to care for one's own personal safety and the absolutely necessary consideration for the safety of other people, is bound to eradicate any trait of recklessness which may have existed in the first days of ownership when, proud of the capacity to manage a machine, the youngster opens up his throttle and lets her " rip " along the high road.

I am positive that, with due safeguarding, the possession of such a machine can only result in good.



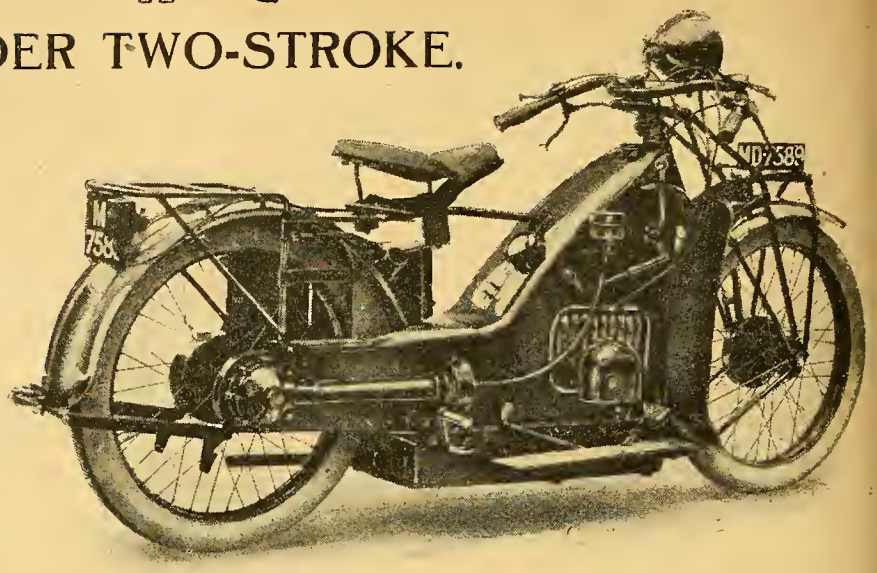
Two youthful and happy owners of Triumph and Enfield two-stroke. Both machines are good examples of the many mounts on the market suitable for either boy or girl.

# A FOUR-CYLINDER TWO-STROKE.

## Advanced Design Exemplified in the Low Motor Cycle; Much Originality and Many Commendable Features.

PRACTICAL and enthusiastic riders have given much thought to the ideal motor bicycle, which has been comparatively easy to conceive, but insuperably difficult to produce on account of expense. The machine described below is the "ideal" of Professor Low, who has been long connected with the motor cycle movement, and has made a careful study of motor cycle design: in fact, his association with the Auto Cycle Union as a judge has placed him in close relationship with all types of machines.

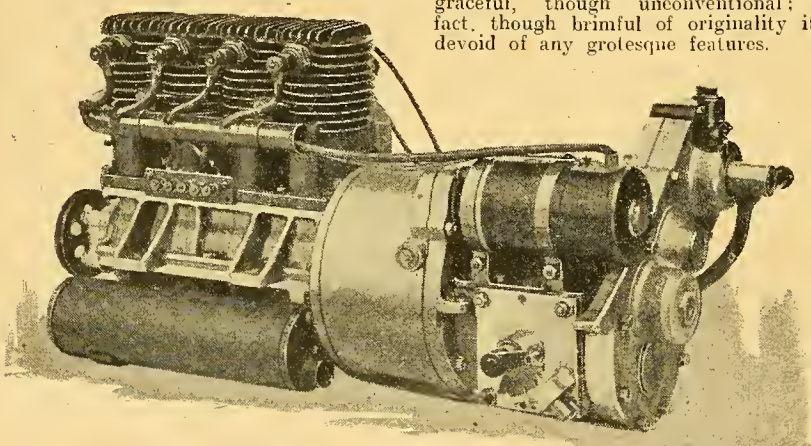
His production is of thoroughly sound design and bristles with novel points.



Off-side of the Low four-cylinder machine, showing the enclosed transmission and the speedometer drive from the propeller-shaft. There are no decompressors, but the clutch is controlled by the left Bowden lever and the front brake by the right Bowden lever. The left-hand pedal controls the back brake and the right-hand one the clutch, for which there is a dual control. The change speed lever will be noticed adjacent to the top tube.

### All Mechanism Concealed.

A certain section of potential purchasers of motor cycles require a mount which can be ridden in white flannel trousers to the tennis club, or in dress clothes, as well as in everyday garb. Many riders have also expressed a wish for a machine with shaft drive, an even torque, and one which could be hosed after a muddy ride. Such a machine is the Low four-cylinder two-stroke.



### Not Available on the Market.

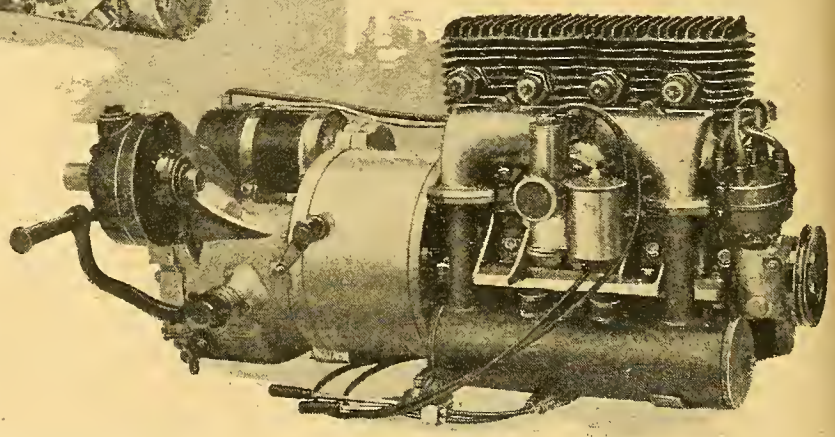
It is a great pity, however, that it should have first seen the light as the production of a clever inventor who has made it as an experiment to prove his ideals and to give him useful data for the future. It cannot be supplied to the public, and even if some enterprising manufacturer arranged to produce it tomorrow it would be months before it would be in a fit state to be placed on the market. Still, the dreams of the imaginative enthusiast have been fulfilled, and the machine is actually, so to speak, in the flesh and running, if not perfectly, well enough to promise great things in times to come.

The charm of the Low machine is that engine and transmission are entirely enclosed, while the general lines are graceful, though unconventional; in fact, though brimful of originality it is devoid of any grotesque features.

Pressed steel is used for the frame construction, and serves to enclose engine and gear box units and the two and a half gallon petrol tank, tubes being employed only in the forks and carrier. No attempt has been made to embody rear spring suspension in the design, but the saddle is mounted on duplex laminated springs and a linked stay, while the cantilever type forks are of light, but strong construction, employing a laminated spring.

### Four-cylinder Three-port Two-stroke.

For the first time in the history of the motor cycle movement a four-cylinder two-stroke engine forms the power unit of a single track vehicle. Though of the three-port variety, the engine design



Four-cylinder two-stroke power unit of the Low motor cycle. Note the high tension distributor, the Rotax dynamo mounted on the gear box, the clutch casing forward of it, the drive to the propeller-shaft and the kick-starter. It will be seen that a fan pulley is shown in the lower illustration but it has been found that a fan is unnecessary.

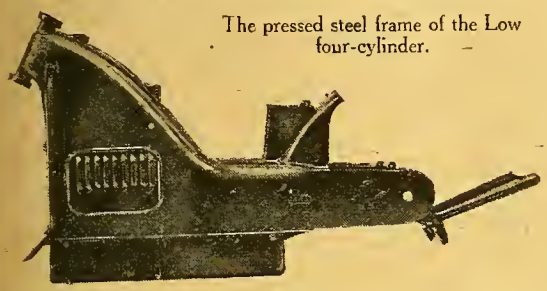
**A Four-cylinder Two-stroke.—**

shows originality; the cylinders form a ribbed *monobloc* casting, but with air passages between each, and Prof. Low took considerable trouble in designing them, beginning operations by making a set of dummy cylinders with glass sides, and pumping in smoke so as to see how the gas whirled and mixed with the incoming charge. The inlet and exhaust manifolds are one casting, so that the incoming charge is adequately heated by the exhaust. On the inlet side of the engine are shown compression release valves, but these have been discarded as they have proved to be useless in actual practice.

**Four-throw Crankshaft.**

The crankshaft is machined out of a solid bar, and has the cranks set at 90°, while the pistons have been carefully designed so as not to break up the incoming charge and cause condensation.

Lubrication is effected by pressure in the oil tank, about 4lb. per sq. in. being attained after a few revolutions when



The pressed steel frame of the Low four-cylinder.

the oil is forced through to every part of the engine, while there is also a connection from the crank case to the inlet pipe so that a small amount of oil mist is introduced into the cylinders, producing much the same effect as petroil lubrication. The oil also serves to form a seal between the crank case divisions, oil flowing between each partition, and thus helping to retain crank case compression.

The flywheel is rather small, being but 6in. in diameter, yet it contains a multi-disc clutch, which consists of alternate Ferodo and steel plates; the clutch fork is similar in design to that usually employed in motor car construction.

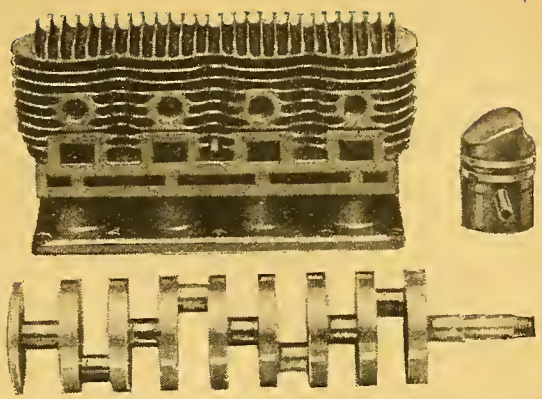
Engine and three-speed gear box form a complete unit, the gear box being of standard design with constant mesh wheels, the change being effected by means of dog clutches. The gear ratios are 4.75, 8.35, and 13.5 to 1, while the gear shafts run on Skefko ball bearings. The lubrication of the gear is carried out by splash from a sump in the gear box, a special idler pinion driven off the layshaft being provided for this purpose.

**Shaft Transmission.**

As the final drive is by shaft and bevel, the drive to the shaft universal joint is through a train of gear wheels with one intermediate idler wheel, the final drive pinion terminating in a square, and there being pot universal joints at each end of the propeller-shaft. The propeller-shaft is enclosed by a telescopic sleeve, a portion of which can be slid backwards to allow disconnection with the drive in the event of the rear wheel requiring to be withdrawn. Mounted on the face of the crown wheel is a plate bearing a series of steel pegs, which engage with holes in the wheel flange, consequently if the withdrawable spindle is removed and the distance piece unscrewed the wheel may be instantly changed, both front and rear wheels being interchangeable, while if a sidecar should be fitted the wheel of this will also be interchangeable.

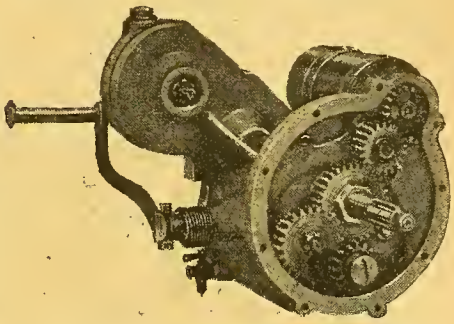
**Intended to Pull a Sidecar.**

Though only 492 c.c., the machine is designed to take a sidecar, and cup-shaped threaded holes are provided in the frame construction into which a ball joint may be inserted. This ball joint is secured by a threaded collar and fastened by a spring clip to prevent it unscrewing.



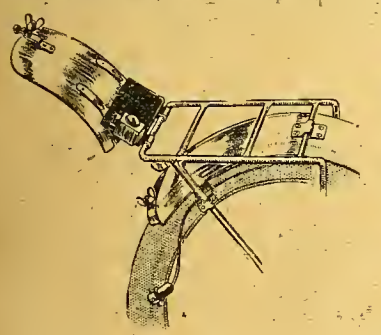
Monobloc cylinder casting of the Low four-cylinder, the five bearing four-throw crankshaft and one piston. The bore and stroke are 52 × 58 mm.

A Rotax dynamo is mounted over the gear box, and is driven by a train of gear wheels. The dynamo supplies current for ignition as well as for lighting: a coil and accumulator being used in con-

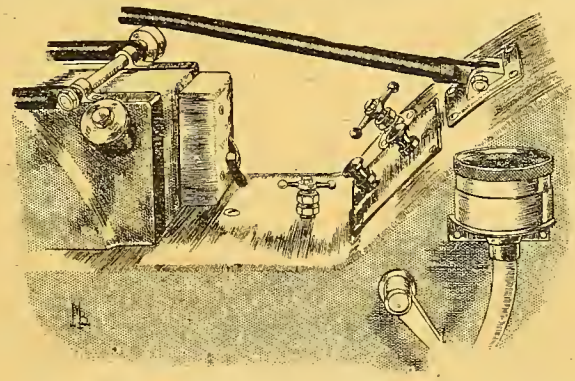


Kick-starter mechanism and dynamo drive. The small independent wheel beneath the main shaft is for splashing the oil into the gear box.

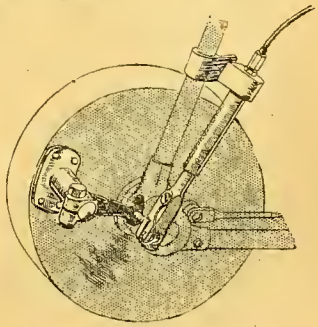
junction with a distributer mounted at the forward end of the crankshaft. A thermostatic switch is employed, which switches the current off automatically if the driver has omitted to do so after stopping. This prevents the accumulator being run down. Metal boxes are carried



To facilitate the removal of the rear wheel, and allow of access to the rear tyre, the lower section of the mudguard is hinged on the luggage carrier.



Lubrication economy is a feature of the Low motor cycle. On the left is the half-gallon oil-tank, which holds sufficient lubricant for 600 miles. Of the two lubricator controls the upper one regulates the main oil supply and the lower one the oil pipe to the inlet manifold.



With interchangeable wheels, quick detachability of the brake control is a necessity. A spring clip holds the brake lever in the yoke end.

**A Four-cylinder Two-stroke.—**

on each side of the lower portion of the rear guard, that on the right holding the tool kit, and that on the left the accumulator.

### Accessibility of Power Unit.

As we have mentioned before, the power unit is carried on detachable beams bolted into the frame, the undershield being attached to the beams, so that accessibility has not been neglected. For the purpose of carrying out ordinary adjustments to plugs or distributer, it is only necessary to open the doors in the frame.

The weight of the machine is 290lb.; 26×2½in. tyres are fitted on wheels built up of 12 gauge spokes, with barrel hubs carried on large size Skefko ball bearings, and each is fitted with an internal expanding brake, which comes away intact with the wheel; front and rear brakes are interchangeable. The steering head is fitted with 3in. ball races.

Despite its rough state, the experimental machine ran extremely well. There was no silencer fitted at the time of our brief test, but the exhaust made a delightful hum reminiscent of a miniature aeroplane, while the acceleration was all that could be desired, and the engine ran with the smoothness of an eight-cylinder, there being four impulses per revolution.

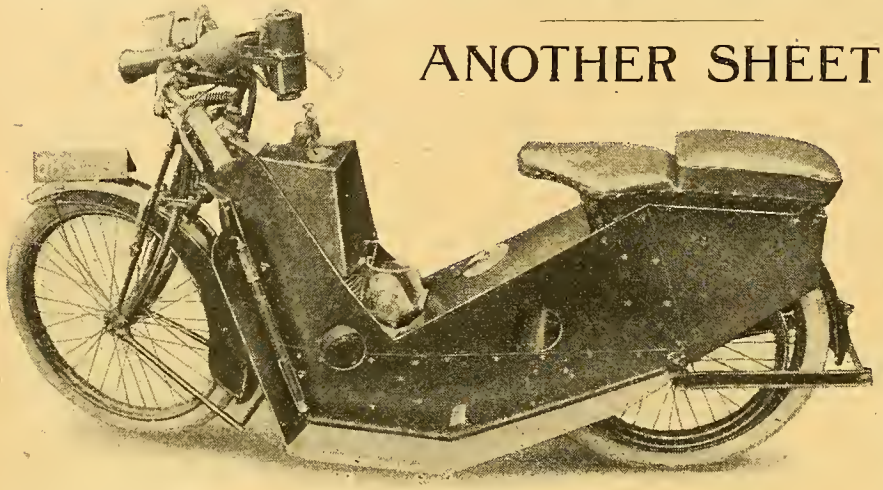
Experiments relating to carburation are still in their infancy, and though the machine was not perfect in this respect it showed great promise, and when once the proper adjustment has been effected it seems as if the flexibility would be considerably superior to that of other two-strokes we have tried. The saddle suspension and forks were most comfortable, but it is admitted that the rake of the steering was a quarter of an inch out, while the design of the handle-bars was not ideal. Still, these are but trivial points, and for an experimental model its behaviour was quite remarkable.

### Cycle Car Engine Foreshadowed.

Prof. Low is quite confident that the faults of which he is fully aware can be entirely eradicated, and that the weight may be considerably reduced. Altogether, the experimental machine has run a distance of about 1,500 miles. We understand that experiments are being carried out with an engine on similar lines for cycle car use.

# ANOTHER SHEET STEEL FRAME.

## A Weather-proof Machine Privately Constructed by Two Readers in their Spare Time.

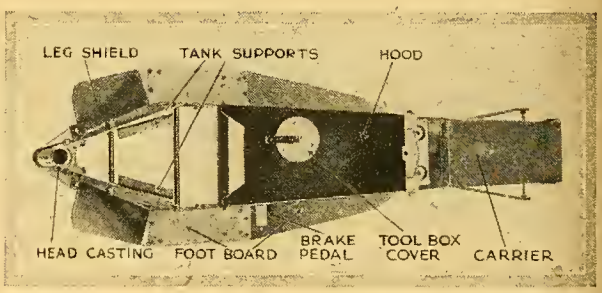


Although constructed of steel plates, this machine approximates in weight to a conventional motor cycle with the same equipment.

COINCIDENT with our description of the Low four-cylinder machine, we are able to publish illustrations of another "ideal" produced by two readers in their spare time, but since these enthusiasts sign themselves "Cygnet" we assume that they wish to remain anonymous. Their efforts, however, have produced a mount which in no way suggests the amateur constructor.

The frame is built up from a number of bent steel plates and one malleable casting—the head. Bolted to this are two plates forming the front members, the parts of which are bent nearly at right angles to form leg shields and also to aid cooling of the engine. Extending from the front members are two plates, the bases of which are turned up to provide footboards. Two further plates of very light gauge steel form the carrier and rear mudguard. From the rear wheel axle to beneath the saddle and running inside the side shields are two bent plates acting as stays. In practice this method of construction has proved very simple; but the engine fixing perhaps needs a little improvement.

The design is somewhat reminiscent of the Swan motor cycle, which was on the market before the war. Since the designers sign themselves "Cygnet," they may have had the older machine in mind when carrying out their ideas. It will be observed that the stand is constructed of channel steel, while a pillion seat is part of its permanent equipment. Altogether the machine is a very creditable piece of work.



Plan view of the sheet steel frame.

# THE BELGIAN GRAND PRIX.

SOME considerable interest will be attached this year to the Belgian Grand Prix, concerning the date of which there has been some difficulty. Originally its date was sandwiched in between the Five Hundred Miles race and the International Six Days trials, rendering it too close to these events. However, the date has been altered to July 23rd. The French Grand Prix is on July 2nd, and the Five Hundred Miles race has been postponed to September 25rd.

Last year the Belgian Grand Prix attracted several English entrants, and a thoroughly sporting little race was held on a delightful course near Spa in August, resulting in a win for H. W. Hassall (Norton). This year there will be three classes—250 c.c., 350 c.c., and 500 c.c.—and the Francorchamps circuit will be utilised, which is 15 kilometres in extent.

### 28 Laps for 500 c.c. Machines.

The smaller class will cover the circuit twenty times (300 kilometres), the 350 c.c. machines twenty-four times (360 kilometres), and the 500 c.c. machines twenty-eight times (420 kilometres). It has been estimated that the baby class will finish a quarter of an hour before the 500 c.c. class, and the 350 c.c. class five minutes after the baby class.

The start of the race will be at 10 a.m., which is quite late in the day for a Continental event. Entries, which cost 500 francs (about £10), should be sent to the Secretary of the Auto Cycle Union, 83, Pall Mall, S.W.1. Entries close at ordinary fees (500 francs) on May 31st, and at increased fees (750 francs) on July 15th.

# A T.T. Race for Private Owners

## Possibilities Discussed by One who Refuses to Regard the Scheme as Impracticable. Suggested Regulations.

TWO able writers in *The Motor Cycle* of the 9th inst.—Mr. B. H. Davies in an article, and Mr. T. W. Loughborough, the secretary of the A.C.U., in a letter—succeeded in pouring much cold water over the proposal to hold a T.T. race for private owners. This is a pity; the other side of the question deserves a hearing.

Perhaps the case for holding an amateur event may best be put (1) by answering Mr. Loughborough's four concise queries and (2) by commenting on the additional and, in some cases, far-fetched objections cited by Mr. Davies.

The secretary of the A.C.U. requires further information under the following heads:

(1.) The object of such a race.
(2.) The definition of a private owner.
(3.) The support such a race would receive.
(4.) Its financial aspect.

I will deal with each point separately.

(1.) Mainly sporting. *Incidentally*, the public might learn something of interest regarding the comparative performances of standard sports models; but, if the A.C.U. were to organise the event, it should strictly enforce a rule prohibiting the advertising of successes, either by machines or accessories. I imagine the A.C.U. is powerful enough to do this itself, but possibly the help of the Manufacturers' Union might be obtained.

To find the best amateur *rider* would be the primary aim; the super-tuner who was not also a fine driver would, I feel sure, automatically take a back place among the finishers in such a race as the T.T. This fact, too, rather disposes of the assertion of B. H. Davies that victory would fall to the longest purse.

(2.) Mr. H. J. Pooley, the honorary secretary of the N.W. London M.C.C., a purely amateur association, supplied in a recent issue his club's definition, which is reprinted below:

"The membership of the club shall be confined to amateurs only.

"No member shall be eligible for membership or shall remain a member who accepts or has accepted any monetary benefit or consideration or the equivalent from a person or firm trading in the manufacture of motors or accessories thereof, or who shall have secured possession of a motor vehicle or accessories from such trading person or persons at a price or on terms which may, in the judgment of the committee, represent the equivalent of such consideration. The committee is entitled to demand the production of receipt or other satisfactory evidence in demonstration of this qualification.

"Membership is prohibited to those who are engaged or employed in the manufacture, sale, exhibition, or exploitation of motoring goods or accessories.

"No member shall willingly or knowingly permit his name to be used in connection with the advertisement of motoring goods or accessories.

"Members competing in competitions organised by this club shall use only machines and accessories which are their own *bona fide* property, or are similarly owned by another member of the club.

"No member shall accept any cash prizes for any motoring achievement or service, whether in competition or otherwise. He may, however, accept from the donor a prize in kind in lieu of the cash prize should such alternative be proffered. No member shall during his membership convert into cash any prize gained in motor cycling competitions."

Taking this as a basis, further precautionary rules might be added as follows:

Each machine must have been in the owner's possession for at least three months prior to the announcement of the race; it must be a listed model, to catalogue specification, and have been offered to the public in its present form for at least six months prior to the date of the race.

Each entrant must sign a declaration certifying that the above particulars are complied with and, further, that he has received no help or assistance from any manufacturer, and that his machine has not been returned to the works for any cause whatsoever since delivery.

### A T.T. Race for Private Owners.

Modifications from catalogue specification, such as changes of carburettor and/or substitution of aluminium pistons, close ratio gear boxes, etc., to be declared. (In most cases these would be allowed; but any flagrant rebuilding of a machine would be detected by an independent committee, which would work on the main principle that the race is first of all a driving test, and would act accordingly.

Machines to be kept under A.C.U. observation right through practising; necessary replacements to be notified at once, and made under observation from a stock of spares for the six or seven makes entered (there would not be more) to be kept specially for entrants by the organising body.

(In the event of the race being held in the I.O.M. four practice laps only required and allowed; and three laps to constitute the race.

(3.) Already a dozen private owners, none of whom are famous riders, have announced their intention, in letters to this journal, of competing if the race is held. It is just this type of rider we want—not the well-known "shamateurs" who were evidently in the minds of Messrs. Loughborough and Davies when they penned their objections.

Granted that a responsible body such as the A.C.U. guaranteed the enforcement of strict regulations based on those already outlined, there seems no reason why the event should not receive an exceptionally fine entry. There are over 370,000 motor cyclists in this country; surely there are fifty genuine private owners willing and financially able to enter an amateur race.

(4.) The financial aspect is, of course, bound up with the question of support. Let the A.C.U. experiment in the first place by running a 500 c.c. race only, say, on the day between the Junior and Senior races proper. Let a £20 entry fee be charged, and if, with all the Union's resources already concentrated on the Island, it does not pay—well, the Union had better go out of business.

Glancing through the foregoing and then through B. H. Davies' article I can find few of his objections which have not already been countered. If defining an amateur motor cyclist is an impossible task, how is the difficulty overcome in other sports—golf, billiards, running, yachting?

Again, the "insufficient leisure" and "expense" bogies surely do not apply to all our 370,000 motor cyclists? No! even should the stock machine idea have to be resorted to, and I do not think this necessary or likely, there should still be the requisite number of entrants eager to buy the machines to ride on the Island and, of course, to use afterwards in more prosaic ways.

As I see it there is as yet no proof that T.T. races for private owners are impracticable; the reverse would appear to be the case. A. McL.

# STOCK MACHINES TO BE TESTED.

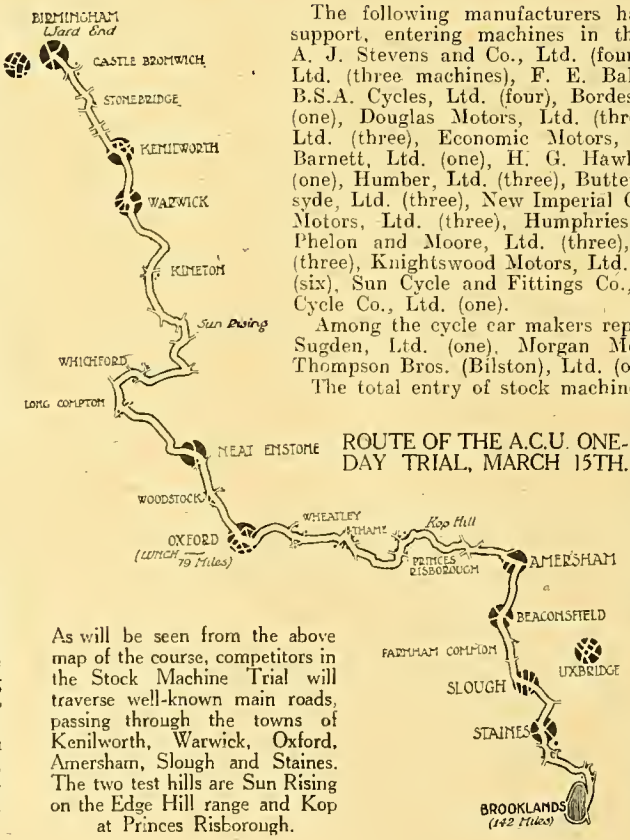
## Notes on the Course of the A.C.U. One Day Trial. Sixty-two Stock Models Entered.

ENTRIES have already closed for stock machines which will compete in the A.C.U. one day trial on Wednesday, March 15th; ordinary entries may be received up to midday on March 1st.

Thanks to the courtesy of the Wolseley Motor Co., Ltd., the start will take place at their Ward End Works, about a quarter of a mile to the west of the Birmingham race course. The route then runs through Castle Bromwich to Stonebridge, and *via* Kenilworth and Warwick to Gaydon, where a turn to the left is made by way of Kineton for Sun Rising Hill. After this hill is climbed the road runs through Shutford to Tadmarton Heath, Wichford, Long Compton, and Enstone, where the main road is joined to Oxford, where the luncheon control will be established—seventy-nine miles from the start.

### The Afternoon Course.

After lunch the main London-Oxford road is followed to Wheatley, after which village the route branches off to Thame, Chinnor, and Princes Risborough, where Kop, the second test hill, will be negotiated. The course then follows through winding lanes to Great Missenden, proceeds to Chesham, and reaches Brooklands *via* Amersham, Beaconsfield, Farnham Common, Slough, Colnbrook, Staines, and Chertsey. Brooklands is sixty-three miles from Oxford, and the total length of the course is 142 miles.



ROUTE OF THE A.C.U. ONE-DAY TRIAL, MARCH 15TH.

As will be seen from the above map of the course, competitors in the Stock Machine Trial will traverse well-known main roads, passing through the towns of Kenilworth, Warwick, Oxford, Amersham, Slough and Staines. The two test hills are Sun Rising on the Edge Hill range and Kop at Princes Risborough.

The following manufacturers have given the trial their support, entering machines in the stock model category: A. J. Stevens and Co., Ltd. (four machines), Ariel Works, Ltd. (three machines), F. E. Baker, Ltd. (two machines), B.S.A. Cycles, Ltd. (four), Bordesley Engineering Co., Ltd. (one), Douglas Motors, Ltd. (three), Dunford and Elliott, Ltd. (three), Economic Motors, Ltd. (one), Francis and Barnett, Ltd. (one), H. G. Hawker Engineering Co., Ltd. (one), Humber, Ltd. (three), Butterfields, Ltd. (two), Martinsyde, Ltd. (three), New Imperial Cycles Ltd. (three), Norton Motors, Ltd. (three), Humphries and Dawes, Ltd. (two), Phelon and Moore, Ltd. (three), Raleigh Cycle Co., Ltd. (three), Knightswood Motors, Ltd. (one), John Marston, Ltd. (six), Sun Cycle and Fittings Co., Ltd. (one), and Triumph Cycle Co., Ltd. (one).

Among the cycle car makers represented will be Sykes and Sugden, Ltd. (one), Morgan Motor Co., Ltd (six), and Thompson Bros. (Bilston), Ltd. (one).

The total entry of stock machines is sixty-two.

The course is over average main roads such as would be traversed by any motor cyclist on his first run out on a new machine. Sun Rising and Kop are the only two hills, the former being a main road on the Edge Hill range, and not regarded as a particularly stiff ascent by the majority of touring motor cyclists.

Such a trial obviously is one in which any manufacturer confident of his products may enter with confidence, knowing they will be tested under normal riding conditions.

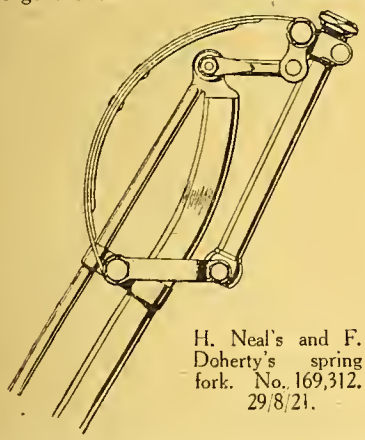
## Various Applications of the Leaf Spring: Absorbing Transmission Shock: Tank Fixing.

### Single Leaf Front Fork.

THE Neal and Doherty spring fork is a special modification of the "parallel ruler" type, in which curved leaf springs are substituted for the ordinary

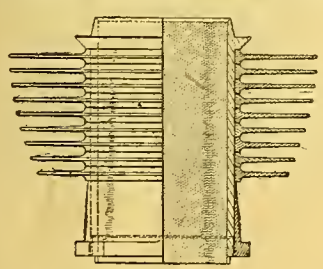


H. Neal's and F. Doherty's spring fork. No. 169,312. 29/8/21.

coil type. The sketch explains the construction. It may be questioned whether the idea is any improvement on the more conventional layout. Leaf springs generally embody a better damping effect on the rebound than coil springs as the result of their internal friction, but the sharp curve of this particular leaf arrangement seems to threaten a rather fierce recoil. The alteration does not cheapen the fork, and few people would claim that its appearance is better.

### Shrunk-on Copper Fins.

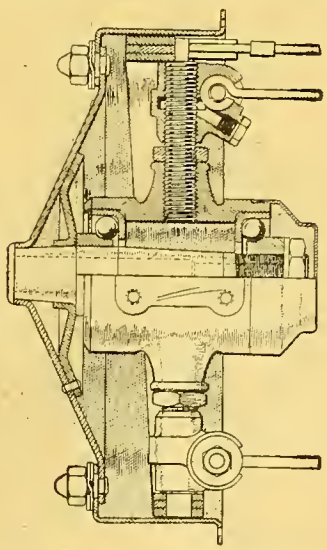
The B.S.A. Co. and Mr. Pearsall are busily seeking a perfect cooling system. Commencing with a finless cast iron cylinder barrel, slightly tapered, they thread over the barrel stamped copper fins, tinned on the inside, and made "of such an interference fit on the barrel that they do not, at the temperatures reached, expand off the barrel." Mr. Pearsall has forgotten more about "fits" and temperature than I ever knew, so I suppose that the last proviso is attainable. The tinning material melts at the maximum temperature which the barrel can attain, and therefore assists towards an absolute metallic union between barrel and fin. Mr. Pearsall has, doubtless, not paid his fees until his experiments proved satisfactory, and so I take it that the shrinking on of these light fins after tinning has been found quite feasible. The cylinder is not likely to be a cheap product.



B.S.A. Company's mounting of copper radiating fins. No. 163,499. 26/5/20.

### Three-Wheeler Simplification.

Many rumours have been afloat anent a possible Matchless three-wheeled run-

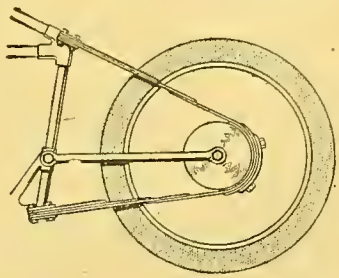


A. H. G. Girling's interchangeable wheel. No. 162,358. 22/4/21.

about, and those readers who have sighted the experimental chassis on the road may be able to tell whether it embodies the steering, braking, and detachable wheel layout patented by Messrs. Collier and A. H. Girling. All three wheels are alike interchangeable and detachable, and the single rear driving wheel is as open and accessible at one side as the front wheels. There is no front axle in the ordinary sense. The centres of the front wheels are cupped. Within this cup a vertical steering pivot is secured at top and bottom to the frame by transverse leaf springs. A short stub axle revolves in bearings carried in a cage which swivels round the vertical pivot, to enable the car to be steered. Expansible brake bands operate against the inner surface of each hub, the detachable wheels being secured to the fixed hubs by a number of bolts, Sankey fashion. The car has no chassis, and its body serves as a frame. The stub axle of the rear wheel runs on bearings mounted in a box fixed to radius rods, designed to obviate any lateral movement. The drive, springing, etc., of this wheel are carried on a projection of the stub axle, so that the rear wheel may be changed as easily as either of the front wheels.

### Springs instead of Tubes.

To evolve a really novel spring frame is no mean feat in these days, and the inventor deserves high credit for originality, whether the device proves practical



L. Pearson's rear springing. No. 165,568. 7/7/21.

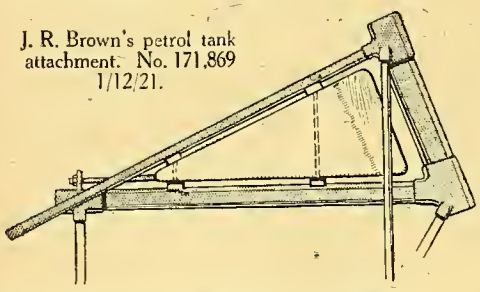
or not. Mr. Lindon Pearson builds his rear frame with a single pivoted fork hinged on the seat-pillar. From the seat lug and bottom bracket spring two pairs of straight leaf springs, and each fork end carries a large disc to which is bolted a U shaped spring. The free ends of each U rest upon the free ends of the main frame springs, sliding thereon. There will, undoubtedly be lots of spring in this frame and the

**Recent Patents.—**

inventor's main difficulty will be to hit a happy mean between "tremble" and "bounce," *i.e.*, the frame will probably give too little or too much. May I seize this opportunity of appealing to inventors, patent agents, and H.M. Patent Office to drop that silly old word "velocipede," which is really extinct in every other mouth?

### Tank Fixtures.

Our tanks are attached to the frame by a variety of methods, ranging from clips at a variety of points to suspending the tank from a tube, or anchoring it upon a platform. Mr. J. R. Brown seeks a more excellent way. He provides a tank with a number of shaped pads, by which it engages the frame tubes in two directions. A threaded bolt with locknuts protrudes from one end of the tank through a threaded lug on the frame, to make all fast by wedging. I don't think manufac-

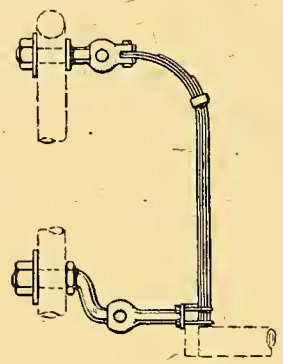


J. R. Brown's petrol tank attachment. No. 171,869 1/12/21.

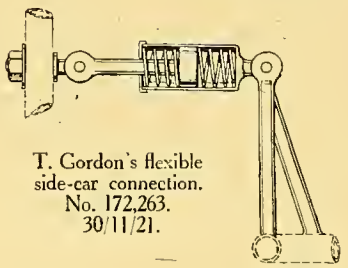
turers will fall in love with this notion at first sight. I can imagine a novice, supposing that his tank was loose, putting a 14in. wrench on the lock nuts, and pulling the end of his tank right out.

### Flexible Sidecar Connections.

Mr. T. Gordon's specification is hardly complete enough to satisfy an inquisitive student. Being an Australian, Mr. Gordon has unquestionably fractured at least one rigid sidecar chassis on his native roads. So the notion of a flexible, or, as he prefers to call it, "yieldable" connection between cycle and sidecar not unnaturally occurred to his brain. The sketches show the results.



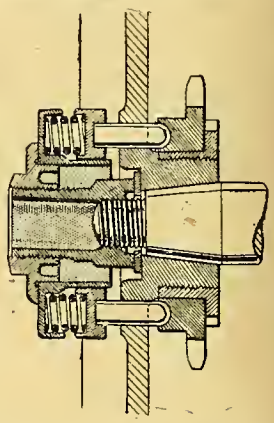
T. Gordon's leaf spring side-car attachment. No. 172,264. 30/11/21.



T. Gordon's flexible side-car connection. No. 172,263. 30/11/21.

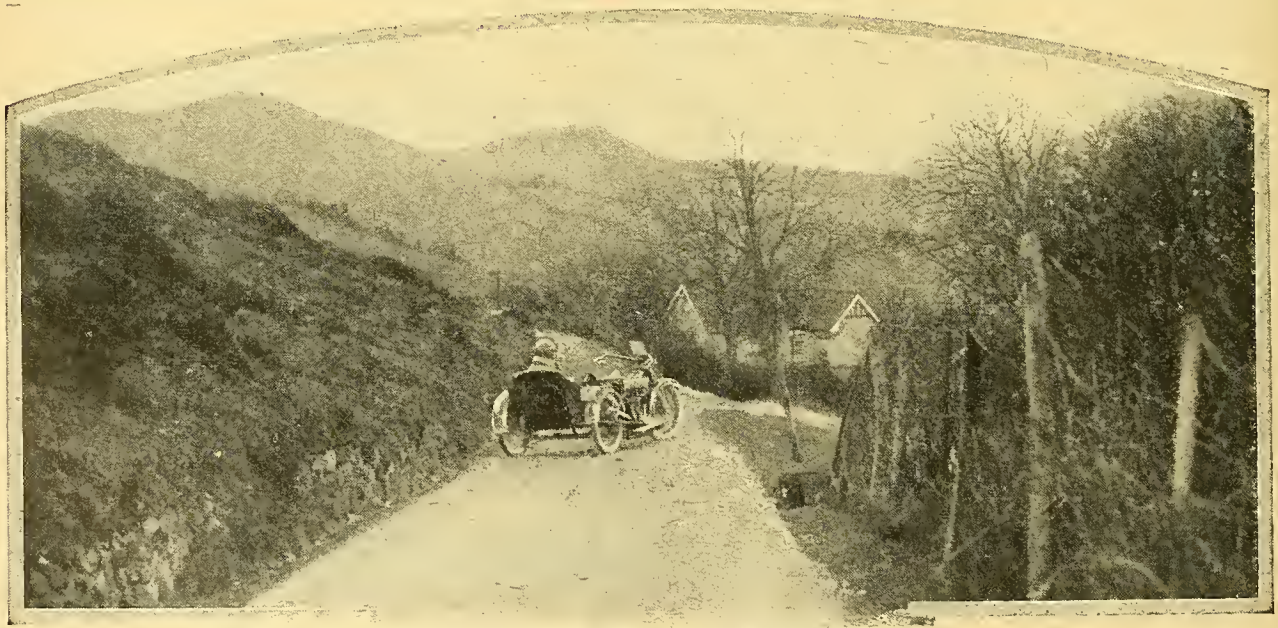
### Absorbing Transmission Shocks.

An obvious merit of the shock absorber now to be described is that it can be entirely dismantled without affecting any other part, although it is fitted to an outside flywheel engine. Invented by



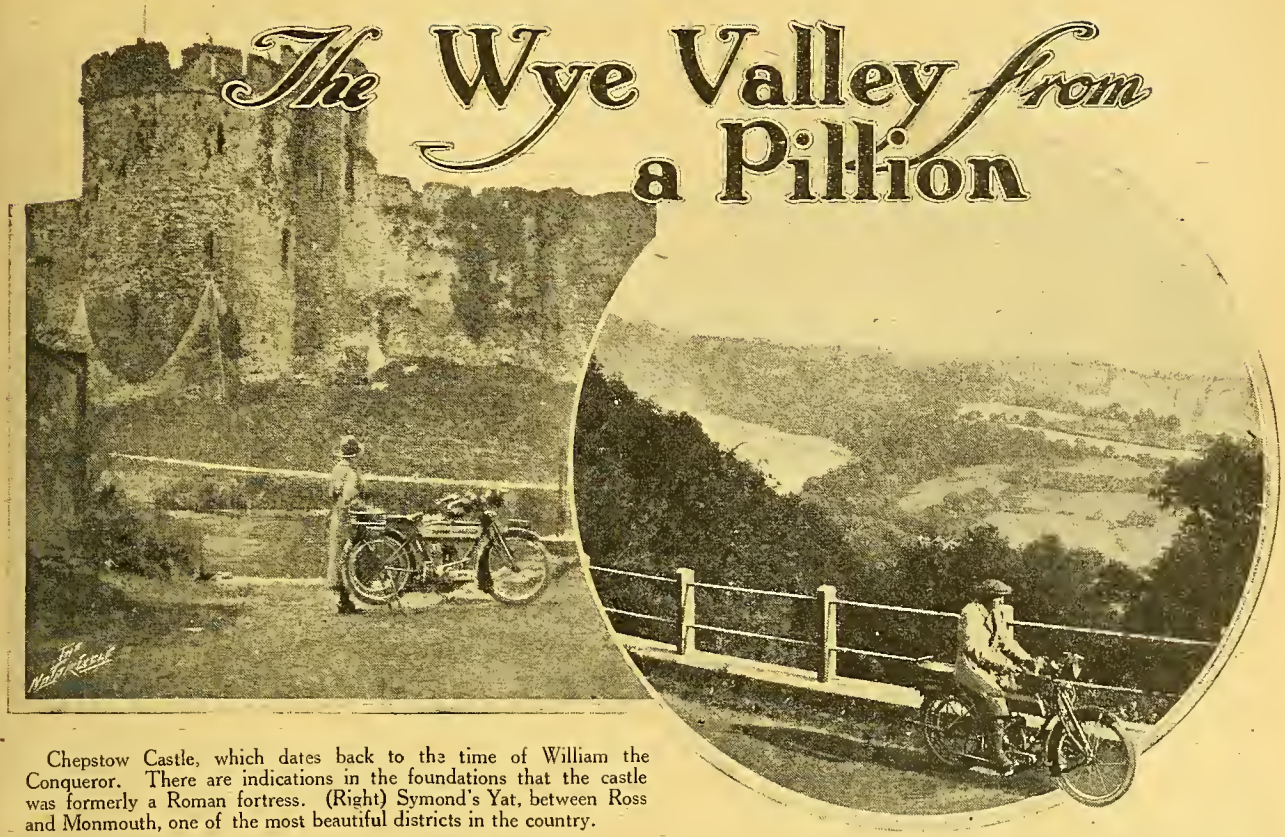
S. L. Bailey's shock absorber. No. 172,093. 28/11/21.

Mr. S. L. Bailey, it now adorns the sporting o.h.v. Douglas machines. The chain sprocket is an easy riding fit on a flange screwed to the inner side of the flywheel hub. Six conical recesses are formed in the boss of the sprocket. Six hard steel pins have rounded ends fitting in these recesses, and the shanks of the pins slide through holes drilled in the web of the flywheel. On the outside of the flywheel are the necessary carriers, with adjustments, for six small coiled springs. When the engine starts the flywheel carries the pins round, and they tend to be forced out of the recesses in the sprocket against the pressure of the springs.



ON THE MALVERN HILLS. Although grey and barren at this time of the year the Worcestershire Beacon and the other hills of the Malvern group stand out like sentinels in the midst of a plain which is one of the most fruitful gardens of England. Several grass tracks lead to the summits, and the Enfield sidecar here shown has just descended to the foot of one of them.

# The Wye Valley from a Pillion



Chepstow Castle, which dates back to the time of William the Conqueror. There are indications in the foundations that the castle was formerly a Roman fortress. (Right) Symond's Yat, between Ross and Monmouth, one of the most beautiful districts in the country.

## Describing a Day's Run in Beautiful Monmouthshire, where the Wye and Severn meet.

NOT even the prospect of a *very* early start deterred me from accepting an invitation to go to Tintern on the pillion of a 4 h.p. Triumph.

As it happened, the start was hardly so early as intended, for we did not get away until just after half-past seven. An uneventful run of thirty-two miles through sleepy villages brought us to Gloucester, sleepier still in the righteous calm of a Sunday morning. The cathedral was closed, but the west doors were open behind the gratings, and we were able to see inside. One's first impression of the massive Norman pillars is that they are far too big for the length and breadth of the building, but they certainly add to the solemnity of the place, if not to its beauty. The statues in the niches outside the south porch are fine, but we were surprised to notice the weather-worn state of some of the stonework.

### Seeing an Interior at Second-hand.

After inspecting photographs of the interior of the cathedral in the shop window of a photographer who kindly leaves his blind up on Sundays, we set off again down Westgate Street, crossing the Severn just outside the town. More people were about now, and the good roads lent themselves admirably to our obvious duty of reducing the pride of other cyclists and sidecar drivers. Then came hilly country, but the Triumph was undismayed and seemed to enjoy the climbs as much as we enjoyed the glorious views of well-wooded slopes and pasture lands much refreshed by the recent rains. It was not long before we came to Ross, well set up on a hill above the Wye. Here we saw the quaint old Market House, and also had a peep inside the church to see the two trees growing there, but were not able to examine them, as a service was being held. Leaving Ross and turning south after crossing the Wye, we left the main road near Goodrich and made our way towards Symond's Yat. The Wye was crossed again by an iron bridge, on which we met a patrol of boy scouts, and then we followed a rough and stony road until it divided, one branch going uphill and the other down, in the same direction and both equally bad. Here a passer-by told us to take the upper road to get to the head of the Yat, and the lower road for the ferry, assuring us that both we and the Triumph could get across the river. Out of consideration for our tyres, and also because a remarkably heavy rainstorm appeared to be approaching, we went only part of the way up the higher road, but were able to take a photograph which gives a good idea of the place. The densely wooded banks rise up steeply from the river's edge, and here and there great crags and boulders stand out among the trees. Dotted about on the right bank there are many houses, and away to the right we heard a church bell ringing, though the church itself was hidden.

### No Help from the Ferries.

Coming down again, we went to the ferry, but it was impossible to get the Triumph across, as, quite apart from the size of the ferry boat, there was no

**The Wye Valley from a Pillion.—**

approach on either bank. Refusing several invitations to " 'ave a boat on the river this afternoon, sir," we went back again across the iron bridge to join the main road where we had left it, and rode on to Monmouth. Here we ran through the town to see the old gateway to the bridge over the Monnow, and then back again across the Wye, which we followed closely down to Tintern. The scenery here is beautiful, the river winding among the hills and woods of the Forest of Dean. Tintern Abbey, a Cistercian foundation, stands near the river, with a background of tree-clad hills. It it a glorious building, and considering that it was Henry VIII. who, to quote the guide, "took the roof off it," it is in a wonderful state of preservation. The abbey itself is perfectly cruciform in shape, and what is left of the monastery buildings lie on the north side. We took several photographs of it, but scaffolding mars most of them. Notices warning visitors to stand clear of falling *débris* are posted in many places, and bear the date " May 6th, 1914," from which one gathers that the work of restoration was interrupted by the war; whether or not it has yet been resumed I do not know. The guide was busy with another party, so we were able to wander round as we liked. Picture postcards are on sale at the entrance turnstile (admission is 6d. each).

The ruins of Tintern Abbey, five miles from Chepstow. These venerable monastic ruins excel in beauty anything of the kind in the kingdom.

The famous Windcliff, from which it is said that the finest view in the kingdom is to be obtained, was passed, as we did not see a road up which the Triumph could be driven; even from the main road, however, one gets splendid views, from the Wye at one's feet, across stretches of fields and woods far away to the Severn, gleaming like silver in the distance, with Kelston Roundhill (near Bath) standing solidly in the background. We took a photograph of a curious wall of rock rising, so it seemed, almost vertically from the trees which encircle its base, and ending most abruptly. On the left one sees the river Wye, and right in the background there are several glimpses of the Severn.

On again we went to Chepstow, a very hilly little town near the junction of the Wye with the Severn. Going down two or three steep and stony hills, we stopped to look at the castle and then came out on the last road bridge across the Wye, from which we had another splendid view of the Castle. Crossing into Gloucestershire again at the middle of the bridge, we followed the course of the Severn through Lydney to Newnham. Here again we were disappointed of a ferry, for the tide was out, and there seemed more sand than water in the river bed. It seems unreasonable to be obliged to go up to Gloucester and back again when one's home lies about twelve miles, as the crow flies, from Chepstow. From Newnham we went through Westbury to Gloucester, and home again by the way we had come. It was a no-trouble run, and we reached home after having done 143 miles in just under ten hours, and having seen one of the most beautiful corners of England in a very delightful way. M.H.L.

# FAMOUS SCOTTISH HILLS.

THE Rev. J. M. Philpott has raised a few points in connection with my impressions of some famous Scottish Hills. In a sense, it is rather over six miles from the absolute base of the Tornapress side of the Pass of the Cattle to the summit; but the road barely rises 100ft. in the first mile, which, therefore, has an average gradient of about 1 in 50, and is hardly worth inclusion in a " climb." The Applecross side is as near as no matter five miles in length. No survey of the Inverfarigaig Corkscrew has yet been published, so far as I know, and it is not in the contour books; the gradient, as given in my article, is a maximum, not an average, occurs on two corners, and was measured by a Tapley motor cycle gradometer, which is not a precise scientific instrument. I agree with Mr. Philpott that it is a " rider's hill," rather than an " engine hill." Mam Rattachan is, surely, a surface hill, and except for very small engines the same applies to Glendoe. Mr. Philpott is a famous rider of such engines, and it must be admitted that one's mount makes an immense difference to the impression which a hill creates. With a 250 c.c. or 350 c.c. which has been driven hard all day, and is high geared on its low ratios to permit of maintaining a fair average, most hills figuring as " observed " in big trials will put a certain amount of wind up a good rider. With a $3\frac{1}{2}$ h.p., running well inside itself all day and possessed of a dreadnought emergency gear, surface is really the only factor which matters on an observed hill. I have never driven a baby up the Pass of the Cattle, nor have I any intention of doing so. Not because it wouldn't get up, but because I dislike being pitched about the road, and I find weight reduces this discomfort to the minimum. B. H. DAVIES.

# AN ITALIAN THREE-WHEELER.

## Engine, Gear Box, and Driving Wheel carried in Hinged Sub-frame.

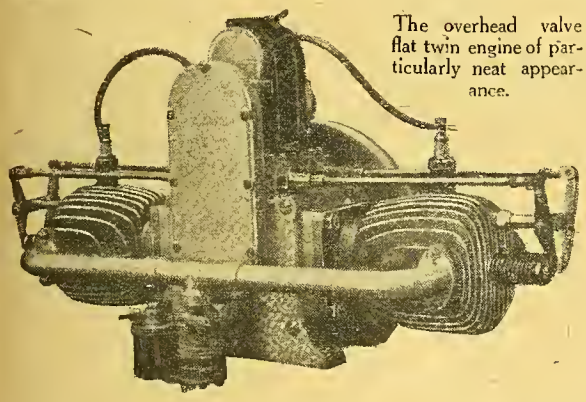
THE designer of the Moto Cor has mounted engine, gear box, and driving wheel in a sub-frame hinged to the main chassis, connection between the two being effected by semi-elliptic springs.

By this construction, of course, the body and passengers are adequately sprung, but a fairly high proportion of the engine and transmission weight is unsprung.

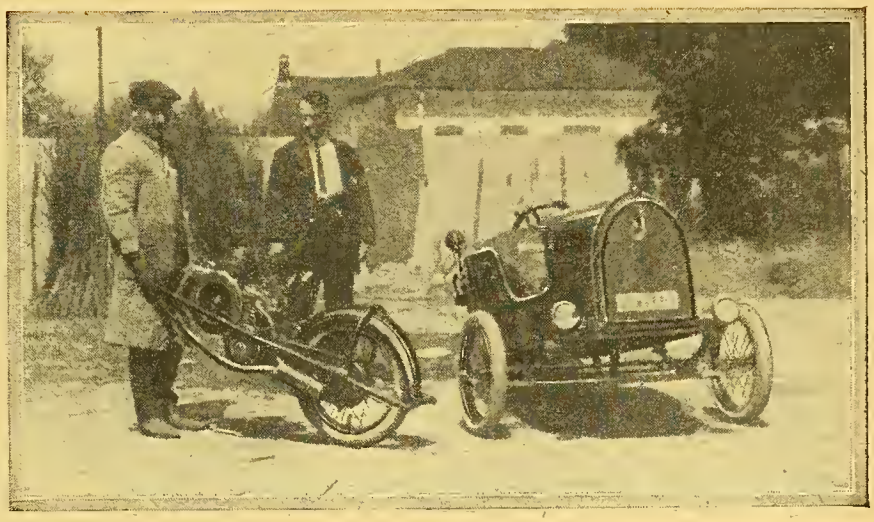
### Flat Twin o.h.v. Engine.

The power unit is a horizontally-opposed four-stroke twin of 575 c.c., having all valves overhead. Vertical radiating fins, set longitudinally upon the cylinders, are used.

Lubrication is by hand pump with semi-automatic drip-feed delivering oil to a reservoir in the crank case and on to the ball bearing connecting rods and crank-shafts, and conducting it by means of grooves to all other moving parts of the engine.



The overhead valve flat twin engine of particularly neat appearance.



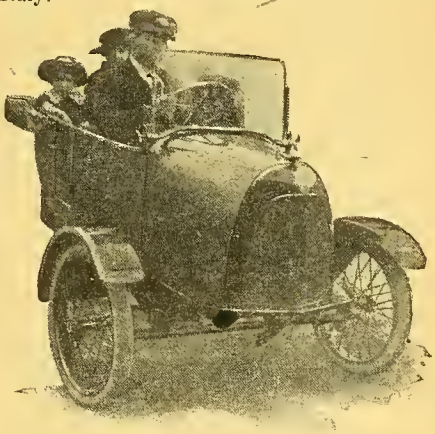
This shows the Moto Cor sub-frame detached complete with engine and gear box.

Placed behind the engine and anchored to the sub-frame is the three-speed gear box, which gives three ratios of 4½, 8, and 13 to 1.

The driving wheel is easily detachable, by means of a withdrawable spindle, without interfering with the transmission mechanism and a motor cycle type of stand is provided. Both brakes are applied to the rear wheel, one being of the external and the other of the internal variety.

Semi-elliptical springs are used for the front suspension; also the body lends itself to many variations: one type carries the seats tandem fashion, and the stability of the machine is not affected by the presence or absence of the extra passenger, while a commercial body can be fitted without structural alterations.

The designer of this vehicle is Armino Mezzo, 6, Via Giuseppe Grassi, Turin, Italy.

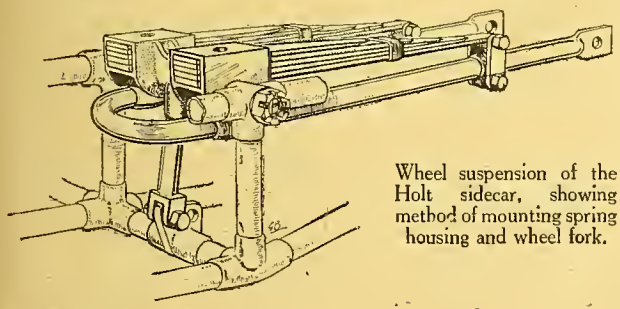


The Moto Cor with two-seater body. Note that there is room for a child beside both passenger and driver.

# A NEW SPRING WHEEL SIDECAR.

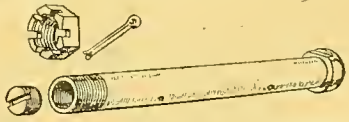
## The Holt Chassis: A Soundly Constructed Attachment Suitable for Medium-weight Machines.

THE problem of suspending the sidecar and its wheel in such a manner as to absorb all road shocks before they reach the motor cycle frame is one that has been tackled on numerous occasions, and with varying degrees of success. In many cases it has meant the addition of weight, increased expense, inaccessibility, and many moving parts in which wear may take place. It is with the object of overcoming these difficulties that the Holt spring wheel sidecar has been evolved.



Wheel suspension of the Holt sidecar, showing method of mounting spring housing and wheel fork.

The underslung chassis is rectagular in shape, and is composed of two main side members of girder construction. Three tubes form the base while the whole of the wheel and its suspension is encircled by tubes also built up in girder formation. Built on to the chassis is a forward extension whereon is mounted the foot-



The hollow main axle with oil retaining screw removed. The flat on the end cap forms the key-way that prevents rotation of the axle when assembled.

**A New Spring Wheel Sidecar.—**

board, and beneath this is a space that may be utilised for the housing of the accumulators.

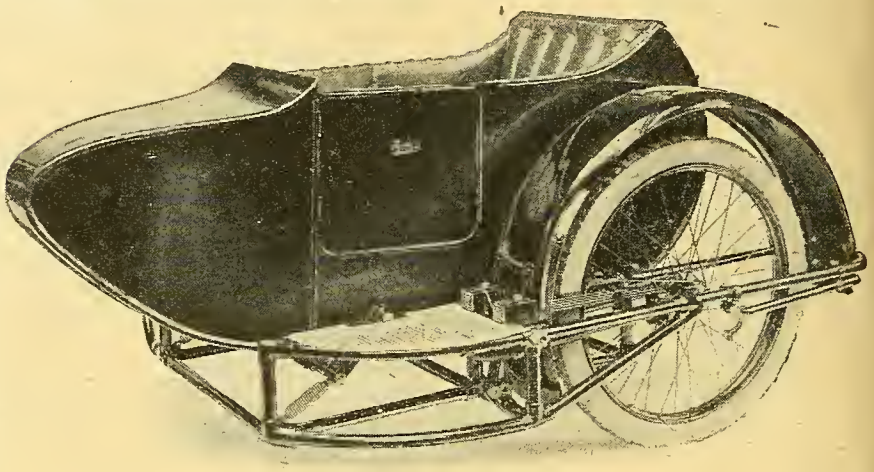
The wheel is carried by a substantial U-shaped member pivoted, with the spring housing, on a common main axle.

### Springing System Described.

In the suspension of the wheel, two quarter-elliptic springs are employed, each having five leaves and extend rearwards to links carried by lugs on the fork ends.

Coil springs in tension are used to suspend the body. A 7½in. mudguard is secured direct to the chassis by means of two detachable tubular stays. A particularly well finished body has detachable backrest and seat, and behind the former, in the bulbous back, are receptacles for a spare petrol tin and a luncheon basket. Two more compartments carry tools and a spare tyre. The upholstery is carried out in leather cloth, and contains pockets for maps, gloves, etc. The weight of the chassis complete is 105lb. With the body fitted the sidecar scales less than 1½cwt. The retail price at present fixed is £40. The patentees and manufacturers are The Holt Motor Manufacturing Co., Earlsdon, Coventry.

During the course of a brief test, we were able to observe the behaviour of the springing arrangements. The roads traversed were chosen on account of their appalling surfaces, and it was found that the shocks received by the wheel were almost entirely damped out. The body was remarkably steady; indeed, the sensations were in every way similar to those experienced in a well-sprung car.

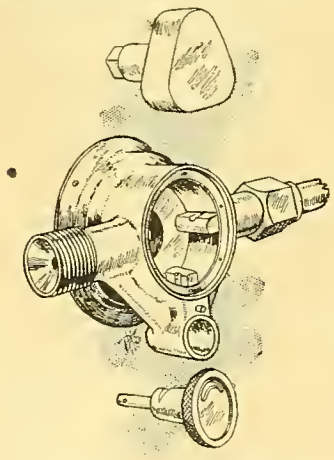


Good appearance and comfort are outstanding features of the Holt body. The pleasing manner in which the lines of the body blend with those of the chassis is at once apparent.

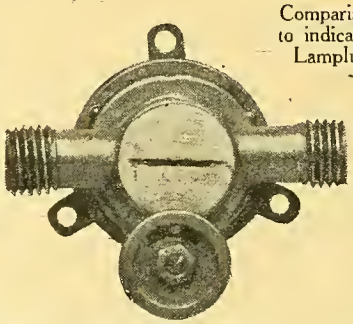
# A MINIATURE MECHANICAL OIL PUMP.

## Novel Driving Arrangements and easily varied Oil Delivery in New Lamplugh Fitting.

MOST of the manufacturers of brass tank and lubricator fittings have entered the market with some form of mechanical oil-pump, and one of the earliest was S. A. Lamplugh, Ltd., of Tyseley, Birmingham. The throttle-controlled Lamplugh pump was quite well known, but unfortunately it did not gain universal popularity.



Chief components of the pump. Above is the rotating impellor disc, and, below, the by-pass regulating valve, while the main casting in which the impellor revolves is shown with its cover removed. The plunger blocks are clearly indicated.



Comparison with a half-crown serves to indicate the compactness of the Lamplugh mechanical oil pump.

Under the Lamplugh name, however, a new and much simplified pump, adaptable to any machine, has been evolved. In construction it consists of a shallow cylindrical shell in which revolves an impellor disc having three flats on its periphery. Two spring-loaded rectangular steel plungers are set radially in the pump casing 90° apart, and these plungers are each provided with an oil groove. One of the plungers is in communication with the pipe from the oil tank, the other leads to a regulating valve which directs the oil to the outlet pipe or by a by-pass back to the inlet orifice.

### The Pumping Action.

When in rotation the periphery of the impellor disc is closely followed by the spring plungers, and as the front of the pump is enclosed by a cap which just allows clearance for the impellor, oil flowing from the inlet pipe fills the space between one of the flats and the casing of the pump. This oil is carried round the casing (the spaces above the other flats being filled in turn as they pass the inlet plunger) until it is arrested by the outlet plunger and finds, in the groove of the latter, its only way of escape, and is so forced to the engine or through the by-pass according to the setting of the regulator; all or only a part of the oil may be by-passed back to the inlet side.

### Slow Speed Driving Gear.

Although the Lamplugh pump will run at almost any speed, an ingenious reduction gear has been designed for use in conjunction with it. This consists of an eccentric driven off the half-time shaft (say the magneto driving sprocket), which causes a small plate to oscillate; this plate has a single projecting tooth which in its combined up and down and side to side movement engages with the teeth of a star wheel secured to the impellor disc spindle. One revolution of the eccentric causes one oscillation of the plate, and as the star wheel has ten teeth, it makes one-tenth of a revolution.

The Lamplugh pump is simple, all parts work in oil, and the maximum delivery is greater than any motor cycle engine would require continuously. If any criticism could be made it would be that the pump depends largely on a gravity supply of lubricant; but the makers assure us that the oil may be raised from a supply at a lower level; it is to be assumed, however, that the pump would need "priming" before this could be done.

# MOTOR CYCLES FOR EVERY PURSE.

## A List of Second-hand Machines from the Miscellaneous Advertisements in Last Week's Issue of "The Motor Cycle," arranged in Order of Price.

IN a recent article on "Buying a Second-hand Machine" we advised potential purchasers that the most sensible procedure first of all was to find out just what was obtainable at the pre-determined maximum amount of cash available. This week we carry the idea further by publishing the following table, which gives this information in a most convenient form.

It should be noted that, except in the case of very moderately priced or easily identifiable machines, advertisements offering undated motor cycles have been ignored, but otherwise the list gives a very valuable, if general, indication of the state of the second-hand market as revealed by the most reliable barometer existing, the classified advertisements of machines offered each week by readers of *The Motor Cycle*.

### £20 and under.

### *NON-STOP TRIALS IN THE DARK.*

Sir,—Might I ask your permission to point out a slight error which has crept in concerning my Stewards' Report on the North-West London M.C.C. open trial? I think the A.C.U. report was probably condensed before being sent to you, and consequently gave rather a wrong impression.

My suggestion was that where a non-stop section occurs at night on narrow and difficult roads the average speed, for such non-stop section only, should be 17 m.p.h.

I am sure you will agree that it is very important that the public should not receive the impression that trials are dangerous, and whilst 20 m.p.h. is safe to the experienced rider, rules are made to cover the safety of *everyone*.

A. M. LOW, A.C.G.I., etc.

### *HEADLAMP DIMMING DIFFICULTIES.*

Sir,—To reply fully to Mr. Troughton's letter of February 2nd would require a short treatise on optical projection, space for which you could not afford in these columns.

This misquotation of "wide dispersion and no glare" I had attributed to the printer. I should not knowingly use the word depression in an optical sense.

I am compelled to state [owing to Mr. Troughton's admission of inability to understand one of the most elementary statements in the phenomena of optical projection together with the perfectly impossible presentation of the ray paths in Figs. I. and II., and also in consideration of the fact that every optical statement he has made is incorrect] that I am forced to the opinion that he has not the qualifications necessary to discuss the matter at all, much less to place this device before us as an American solution of the anti-dazzle problem.

"*Minimum* loss of light," of course, is very different to "*without* loss of light," as he originally wrote. Nevertheless, I reiterate all I previously mentioned in my former letter, since I there dealt with the minimum loss in one particular kind of lamp calculated from particulars given by Mr. Troughton, and under what I considered best riding conditions.

He asked, or suggests, that the intensity of all lamps varies inversely as the square of the distance from the lamp. It does not. Neither does a searchlight have a law to itself!

I hope Mr. Troughton is not responsible for Fig. 3, because it is just optical nonsense.

I hope also that your correspondent does not wish me to take his last paragraph seriously. The manufacturers, by the way, do know their job—that is, to sell lamps and lenses!

I am not acquainted with the Grubb lamp or the dipping lamp referred to by your correspondent. The latter, if its title describes it correctly, is undoubtedly proceeding upon sound lines and is one step forward, or two-fifths, the solution of this very simple problem.

Finally, this American device I am sure would not be accepted by our committee on "Lights on Vehicles, etc.," and further, in my opinion at any rate, it does not do anything that cannot be more efficiently done by tilting the lamp until the top of the beam is parallel to the ground (or just touching it at 400ft. distance, say), and using a straight filament bulb in a horizontal plane or fixing a single cylindrical lens of suitable power in front of the lamp.

Like Mr. Troughton, I am in no way connected with the motor or lamp trade, but only a more than satisfied rider of a "ROVER."

London, W.19.

### *FACTORY TESTS AND THEIR EFFECT.*

Sir,—Your comments in last week's issue by "Ixion" as to how miniature sidecars wear, and the tests to which makers may or may not have put such productions before placing them upon the market, prompts us to give you a few words. Nearly two years ago, on account of long war service, our motor delivery vans were in a shocking condition. Prices of new four-wheel vans were so exorbitant that we decided to scrap two, and built in their stead three lightweight sidecars, of course with luggage boxes instead of passenger bodies, which were attached to our O.K. lightweight machines.

The result over the last two years of continuous knocking about more than justified us in entering a lightweight sidecar in the last A.C.U. Six Days' Trial.

The general public should bear in mind that the hack machine of the motor cycle manufacturer is hardly ever in the same driver's hands two days running, and unlike a competition machine which owns its driver, and is in turn owned by the driver, who takes an immense amount of pleasure and pride in it, the hack mount very seldom sees a water hose, or indeed gets any of those little cares and attentions which go to make such pleasurable driving. It is called upon to go out in all weathers at short notice.

We have one machine here now constantly in use fetching castings from the Black Country, which is often loaded up with as much as 2cwt. of malleable castings, and then brought from a Black Country town over the atrocious roads out to our works at Hall Green. Notwithstanding, its original engine and the original sidecar chassis are still, so to speak, "as you were."

p.p. HUMPHRIES AND DAWES, LTD.
E. H. Humphries, Director.

### *"UTTERLY AMAZING SPEEDS."*

Sir,—Mr. Harris, of Melchior, Armstrong, and Dessau, Ltd., has "immediately recognised" the machine indicated in my original letter as the 1922 *de luxe* Henderson.

His identification is, of course, entirely correct, and I am glad indeed to have this opportunity of replying to him—as a disinterested, but greatly experienced, private owner—in fact, as one typical, I think, of the majority of your readers.

The trials, we are told, took place under most arduous conditions, over desert roads, and up mountains which included gradients of 1 in 7. The distance (non-stop, I believe) was thirty-two miles, and the average speed 65 m.p.h. (which means that the machine was travelling at its maximum guaranteed speed of 75 m.p.h. for practically the entire distance). There were also other tests in which these performances were exceeded, and, at the end of each, we are invited to believe the police authorities at once placed their naked hands upon the cylinder casting without discomfort. Add to all this that the day chosen for the trial was the hottest of the year, and the exhibition becomes even more remarkable.

I feel that it is quite useless for me or anyone else to attempt a serious criticism of such extraordinary statements—in fact, I cannot but suspect Mr. Harris of attempting to pull the leg of the amiable, British motor cyclist, which is not very kind or wise of him.

But enough, Mr. Harris should obtain, as soon as possible, authenticated certificates supporting the claims made by him for the 1922 Henderson; let him then enter the machine for a Scottish Six Days or Scott trial and, at the end of it, come back and tell us all about it.

Subject to the award of a gold medal and a non-stop record for the whole trial, my homage is Mr. Harris's. My garments shall be sold and my furniture pawned—anything, in fact, to be able to buy at £175 (or £182? complete with reverse gear) such a truly extraordinary machine.

London, W.2. TOMASO DUBITANS.

Sir,—On reading Mr. Parson's recent letter, I think he must have made a slight error in his calculations. He infers that to do 60 m.p.h. an engine would have to turn over at 7,000 r.p.m.

Now, as a matter of fact, a machine with a 4½ to 1 gear, which is the average top gear ratio of the 3½ h.p. sporting machine, would do 120 m.p.h. at 7,000 r.p.m. This means that only 3,500 revolutions are necessary to attain a speed of 60 m.p.h. H. C. RHODES.

### *IS "THE GAME" WORTH THE CANDLE?*

Sir,—I entirely agree with "Brough Solo" that "the Great Game" is a most expensive one. Further, I do not see what purpose trials over impossible surfaces and up impossible hills can serve. A man would never venture on such routes for pleasure, and if business necessitated it, well, he'd probably ride a horse.

It can only be looked upon as an advertisement for the machines which come through, though one quite as good could be arranged by the firms concerned in a test to destruction of their finished product. Something like boxes are tested in a large revolving drum with beaters inside! There is very little difference, to my mind.

I maintain that the trials of to-day have a very detrimental effect on second-hand prices.

How is a man to know that the machine he is buying hasn't been run in some "gruelling test" and is suffering from cracks and crystallisation owing to being driven over ridiculous surfaces at equally ridiculous speeds?

Does anyone deny that a trials ridden bike wears 50 to 100% more than a touring machine, mileage for mileage?

Ampthill, Beds. ZENITH SOLO.

[We discuss this subject in a leader in the present issue.—ED.]

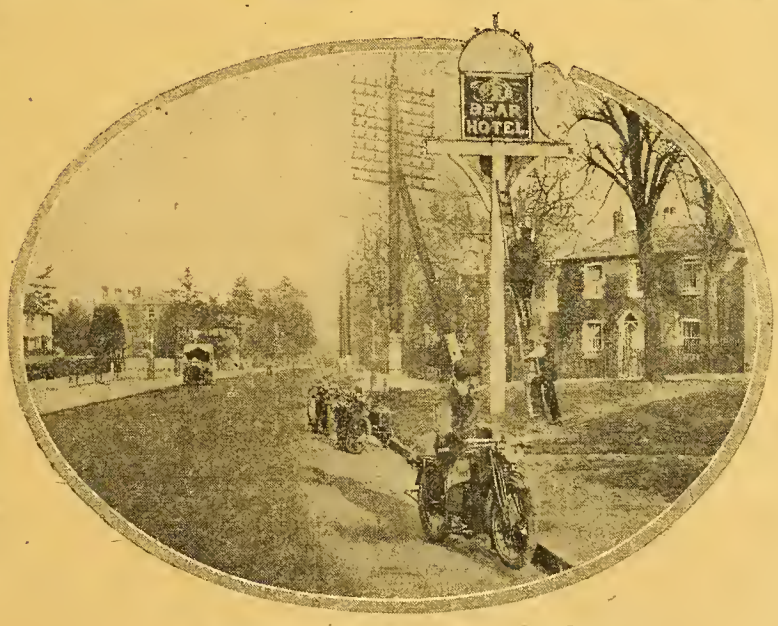
### *SOLUTION-CARRYING SOLUTIONS.*

Sir,—I was touched by the "Agony Par" that appeared in your columns for a suitable method of carrying rubber solution in tool bags, and beg to suggest the following remedy:

Purchase at any garage a short length of the thick rubber-and-canvas water tube ordinarily employed on the radiator connections of cars. Cut it so that about half an inch is left at each end beyond the length of the solution tin, and push in so that it can be shifted up and down with the thumb. (Of course, the diameter of the piece of tube should be such as to allow a good push fit.) Even if the tool-bag be filled with loose tools, it is impossible even to scratch the tin if this device is employed.

M. H. TOWNLEY.

[This correspondence is now closed.—ED.]



On one of the most famous of highways—the London-Portsmouth road. The scene, familiar to thousands of London motor cyclists, is at Esher.

### *"IN AND AROUND CONSTANTINOPLE."*

Sir,—This article was of considerable interest to me, as I also rode a Triumph many hundreds of miles out there in 1920. I should, however, like to make two comments on what the author has said.

First, that there *are* worse roads to be found in this country. Although the surface of the roads in Constantinople has certainly become very bad, the foundations of the roads mostly used are excellent. However, the less about the roads on the Asiatic side the better.

Secondly, the pride of the author at seeing so many British-made bicycles out there is a little premature. The author says that he has seen mostly Triumphs, a couple of Rudges, a Douglas, and two Indian sidecars. Had he interested himself a little more in the nationality and origin of these "Trusty" steeds he would have discovered that in 1920 the British Trade Corporation disposed of a large number of old Army Triumph and Douglas cycles in the city, which were eagerly bought up by the local dealers. Thus we see that the credit is not due to the British export trade but to the disposal of the Army's surplus stores. The Wanderers, of course, were left by the German Army. My observations were that far too little British-made motors and machinery were being imported into the country, which showed a marked preference to the cheaper American and Italian productions.

In passing, I must say that the Triumph machines have made a great name for English machines in Turkey, which should provide an excellent market for British productions when times get more normal, both there and in South Russia. ADVENTURER.

Harlow, Essex.

Sir,—As an ex-D.R. only just returned from two years' motor cycling in Constantinople, the article "In and Around Constantinople" was naturally very interesting to me. I can heartily agree with everything "W. S. J." says about the horrible "roads." Comparing the British D.R. with the Turkish motor cyclist, "W. S. J." says, "The Britisher slips *quietly* and quickly through the traffic," etc. He is, I think, slightly wrong when he says "quietly." The Turk has the standard "Jazz band" silencer, and gets all his noise by always running in second gear. It is a very uncommon sight to see "Johnny Turk" using his top gear, even on a clear road.

It is wonderful the way in which the Triumph stands up to the work out there. They are driven "all out" over the worst possible roads by most D.R.'s whenever they are able to do so without bumping right off the machine, and the only thing which will not stand it is the barrel spring in the forks.

Apart from such little troubles, we had very few things to worry us, and found plenty of excitement in shooting at the large dogs which abound there and seem to delight in chasing a motor cycle and snapping at the rider's legs.

I notice also "W. S. J." remarks about brigands, but think that he has nothing to fear from these gentlemen, as they are really very scarce and have very much "got the wind up" about Britishers.

E.L.

London, S.E.26.

### WEIGHTS OF SIDECARS.

Sir,—We have been very interested to read the letter from your correspondent "F.C. 3888." This gentleman is quite correct when he implies that sidecar manufacturers do not make a practice of announcing in their catalogues and general literature the weights of their various models.

The reason for that fact is this: To ninety-nine people out of one hundred stating the weight of a sidecar conveys nothing; to the hundredth, which your correspondent evidently is, the weight of a sidecar has a meaning because he is an enthusiast.

So far as we are concerned, and we think other manufacturers treat the matter in the same light, there is no secret about what our sidecars weigh. To anybody who is really interested we are always only too pleased to give the fullest possible details both as to weight and upon any other point. Our own "Featherweight" model, for instance, weighs 65 lb., but for any manufacturer to quote such a figure by itself is not very informative—the point which matters is the ratio between the weight and the strength. Unless strength, and great strength, is there, light weight is a risky fetish. For DUNHILLS, LTD.
A. Crawley.

Sir,—I am afraid "F.C. 3888" did not read the "umpteen" lists of sidecars obtained from the Show very carefully, for, in addition to the Canoelet, both the Henderson and Montgomery catalogues quote the weight of each sidecar described, and Messrs. Hughes also give the weights of some of theirs. C.L. 4610.
Norwich.

Sir,—On our stand at the recent Olympia Show we had our twentieth annual sidecar catalogue available for free distribution, and over 2,000 people availed themselves of this opportunity for securing a copy. We mention this because for the last fifteen years we have given the weight as part of the specification under each one of our sidecars. We also give the measurements—overall length, size of seat and height of back, and for the last three years we have given the size packed for shipment and the equivalent cubic feet for export. W. MONTGOMERY AND CO.

### WHEN BORED WITH MAIN ROADS.

Sir,—Referring to Mr. Reg. S. Fowler's recent letter, several members of the West Sussex M.C.C. were interested in his discovery of an unclimbable hill near South Harting, and accordingly a party of some half-dozen machines (both solo and sidecar) made their way there and essayed the climb.

All failed except one, on a 3½ h.p. Rover solo, who made a perfectly clean ascent without foot-slogging or steadying. The weather, I may add, was very frosty, and all of us are unanimous in the opinion that under any other conditions it would be practically impossible.

I do not agree with his statement that the gradient is approximately 1 in 3—it is about 1 in 4 in the steepest part, and the average about 1 in 6 or 7. I wonder if any sidecar machine could now conquer the hill? Owing to the ruts and water gulleys, a high ground clearance to the sidecar chassis is essential.

L. J. FLEMING,
Hon. Sec. West Sussex M.C.C.

[Access to the hill referred to is gained by turning off the main Midhurst-Elsted road about one mile from South Harting; it lies at the foot of the Beacon Hill, on the main line of the South Downs.—ED.]

### GREAT BRITAIN'S HIGHEST ROAD.

Sir,—I was extremely interested when I read in *The Motor Cycle* of December 1st, 1921, the description of a climb to the highest road in Great Britain, and do not for a moment doubt Messrs. Cumming and Sangster when they claim to have reached the record altitude in metalled roads in Britain. But, if my memory serves me rightly (being at present in the bush in Northern Nigeria without any data to go on), I think there is a slight mistake in saying that the Tomintoul Hotel is the highest one in Great Britain. I always understood that the Alargue Hotel, commonly known as the "Cockbrig Hotel," situated at the foot of the "Lecht," in Aberdeenshire, was about 200ft. higher than Tomintoul.
MOUNTAIN LOVER.
Lagos, West Africa.

### HEAVY SIDECAR FUEL CONSUMPTIONS.

Sir,—In reference to a letter in your pages, signed "G.E.," and complaining about heavy petrol consumption with a Matchless sidecar outfit, I should recommend your correspondent to follow "Ixion's" advice and fit a variable jet.
Ipswich. H.W.B.

Sir,—I have owned a two-seater Matchless-M.A.G. outfit since March, 1921. My mileage to December 31st was 3,492 by speedometer, which registers about two miles over per hundred miles. The amount of petrol used was 64 galls., which equals about 54 m.p.g., so that there is evidently something very wrong with "G.E.'s" machine if he only gets 35 m.p.g. My usual load is about 23 or 24 stones.
Edinburgh. A.F.S.

Sir,—The m.p.g. of my (May, 1921) Matchless-M.A.G. two-seated outfit is about the same as "G.E.'s." Thinking the balance would be improved, I transferred third passenger to Tan-Sad. I think bad consumption in my case due in great measure to bad hill-climbing and lack of acceleration causing continual change of gear. B.B.
London, W.C.

Sir,—Can any of your readers tell me the correct way to use a W.S.R. variable jet on an 8 h.p. J.A.P. engine, with Amac two-lever carburetter? I have a 31 jet in just now, and I get about 55 m.p.g., but when I put the W.S.R. jet in I only get about 30 m.p.g. If I turn the screw to a smaller jet the engine misfires and spits out at the air intake of the carburetter. If I turn to a bigger jet the petrol consumption becomes greater, and the engine gets hot and starts smoking at the exhaust. ACME.
Dundee.

### MOTOR CYCLE TAXATION IN 1923.

Sir,—The Portsmouth and District M.C. and L.C.C. is unanimously of opinion that the unfair tax on motor cycles should be reduced, and, taking into consideration that the incomes of the owners of these vehicles have been considerably decreased, that the tax should be at least reduced in proportion. F. G. ROACH (Secretary),
for Portsmouth and Dist. M.C. and L.C.C.

### LIGHT ON THE LIGHTING PROBLEM.

Sir,—Accumulator lighting is by far the cheapest form of illumination. It is clean, convenient, and free from trouble, ranking second in pride of place to the complete, but overwhelmingly more expensive, dynamo set.

Acetylene is troublesome before, during, and after use; its reliability is questionable, even though attention is given to the lamp a few hours before using.

The appended figures speak for themselves:

*Electric Equipment.*

Lucas 510B head lamp, tail lamp, electric horn, and Fuller block accumulators (6 volt 24 amp. hour).

Accumulator charged every month, cost 8d. Twelve hours' service, in periods of approximately half hour daily. Brilliant ray of thirty yards. Cost per hour, 0.7d.

*Acetylene Equipment.*

Lucas head lamp (14 litre burner); tail lamp.

One pound of carbide, 10d., lasts five hours in periods of approximately half-hour daily. Majority of light a few feet in advance of front wheel. Cost per hour, 2d.

One season's riding was sufficient to adjust the difference in the initial cost of the equipments. FOURSTROKE.
Wednesbury.

### COMPLICATED COASTING.

Sir,—May I ask through the medium of your excellent journal why one meets so few motor cyclists who attempt to "free engine" or even "switch off" whilst going down fairly long inclines, which results naturally in less wear and tear, and, in these hard times, the saving of that precious fluid petrol.

The Royal Enfield machine, I might add, lends itself excellently on account of its simple controls to such purposes, with no exertion at all to restart a "dead" motor.
REGINALD GEARY.

### IMPORTANT TRIALS WHICH CLASH.

Sir,—It appears from the rules and conditions governing the Scottish Light Car Trial that entrants in same must submit their cars for inspection not later than 9 a.m. on June 3rd. If this rule is strictly enforced, it will prevent entrants in the Scottish Trial from participating in the popular London-Edinburgh Run, and thereby deprive them of participating in a double event.

From correspondence I have had with the secretary of the Royal Scottish Automobile Club, it would appear that there is a possibility of arrangements being made whereby competitors in the London-Edinburgh Run may present their cars for examination in Glasgow on the morning of June 4th, providing entrants in the Scottish Trial make a definite representation that they are competing in same and also desire to participate in the London-Edinburgh Run.

I, therefore, trust that all who desire to enter both events will promptly notify the secretary of the Royal Scottish Automobile Club, 163, West George Street, Glasgow, so that an early decision can be arrived at.

W. H. WELLS, Captain M.C.C.

### EXPERIENCES WITH A SIMPLE FOUR-WHEELER.

Sir,—Having often considered changing from a solo motor cycle to something with four wheels, chiefly on account of the extra comfort and cleanliness, I was very interested to read "J.H.G.'s" experience with an A.V. monocar.

However, although I have no doubt whatever that the machine is excellent as regards power and reliability, it has occurred to me that, when taking a sharp bend, especially if to the right, there might be a great tendency for it to overturn owing to the very narrow track.

Perhaps "J.H.G." would be good enough to enlarge on this point because, when it comes to a spill, I am for the solo motor cycle every time. R. G. TOLLEY.

Sir,—I would very much like to bear out "J.H.G.'s" statements in regard to the A.V., but in my case with one of the two-seaters, fitted with 8-10 h.p. J.A.P. engine and Sturmey-Archer three-speed gear box.

Although I have only had my 'bus about two months, after having owned nearly every make of motor cycle and sidecar, I would not go back to them for anything. I have yet to be passed on a hill or on the road by a sidecar machine of the same power when I did not want to be, and can take the average North Lancashire main road hills on top with two up.

S. WHITTAKER.

### T.T. RACES FOR PRIVATE OWNERS.

Sir,—I have been following this correspondence with considerable interest, and both from the nature of the correspondence and from friends' opinions there certainly appears to be a great demand for such an event. I feel sure that were such a race organised by the A.C.U. or any other capable body it would meet with a large measure of success, and would undoubtedly be well supported. Your correspondent who deals with the subject in last week's issue is quite correct in what he says *re* defining an amateur and difficulties as to finding a course, but nevertheless I think it would be a great pity to dismiss the matter in this way. In the first place, as to the actual course. The idea of the authorities granting a road is most improbable, the I.O.M. is too far (especially for amateurs paying their own expenses), and I do not think Pendine Sands would meet the occasion either. There remains, therefore, Brooklands as the only really likely venue for an amateurs' T.T.

Trusting that you will use your influence in this matter, and see that the idea is not dropped. I am a prospective entrant. C. C. LABIN.

Sir,—Now that the Southport Motor Club has decided to hold a T.T. race for amateurs, may I venture to make the following suggestion: That the usual classes (*i.e.*, 250 c.c., 350 c.c., etc.) should each be subdivided into—(1) a class for the fast sports machines, of which there are many now on the market; and (2) a class for the standard touring models. R. G. SHAW.

Sir,—Why not have a race for two-year-olds, five-year-olds, aye, and twenty-year-olds?

Now, Mr. Fellowes, look out; *I* have a twenty-year-old De Dion. BRISTOL.

Harfield, Bristol.

(5-6)

### TWO-STROKE EFFICIENCY.

Sir,—I read with interest the letter by Mrs. Mary C. Jennison in your issue of February 9th.

While agreeing with your correspondent regarding the many good points of two-strokes generally, I am somewhat at a loss to understand her statement in which she says, "But the cylinder must not be above 250 c.c. (this applies only to single-cylinder air-cooled machines)."

Does Mrs. Jennison suggest the possibility of overheating or rattle? If so, why?

I might add that I have ridden a Velocette, but at present own a single-cylinder air-cooled two-stroke of 293 c.c., and so far neither of the above-mentioned troubles have manifested themselves. CURIOUS.

Glasgow.

### REAR LAMPS FOR ALL.

Sir,—As a woman motor cyclist, I should like to express my entire disagreement with the Gloucester M.C. and L.C.C. in its desire for legislation to compel *all* vehicles to carry rear lights. There must be an enormous number of motor cyclists, especially of the feminine sex, who do not see any reason why they should be forced to equip their machines with an accessory so superfluous and troublesome as a rear lamp. I cannot help thinking that some of the gentlemen who are supposed to watch over the interests of motor cyclists have got rear lamps on the brain, or they would not advocate a measure which will inevitably lead to large numbers of us who do not possess dynamo lighting outfits getting into difficulties, sooner or later, with the police.

If motor cyclists want to carry rear lamps on solo machines let them do so (although I never heard of one being run down in the dark), but it is surely the height of folly to plead for compulsion, which simply means punishment for failure. A motor cycle is about the last thing in the world that requires a rear light, and the people who are demanding that motor cyclists should be obliged to carry one are doing a great disservice to our pastime.

(MRS.) MARGARET M. STANCER.

### SUMMARY OF CORRESPONDENCE.

Further correspondents challenge "Normac's" claim to have driven a 1911 3½ h.p. Triumph sidecar from Bolton to Ambleside in one hour fifty minutes—an average speed of 37 m.p.h. and fuel consumption of 130 m.p.g.

Referring to "Ixion's" article, "What I Rode in 1921," Mr. J. H. W. Douglas recommends a Longuemare single-lever carburetter, which, he says, gives most excellent results.

Mr. T. Kingsbury complains that on a recent Sunday evening he lent a motor cyclist his lamp generator; it has not been returned.

The "Float-on-Air" pneumatic saddle cover is highly praised by Mr. A. H. C. Randall.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

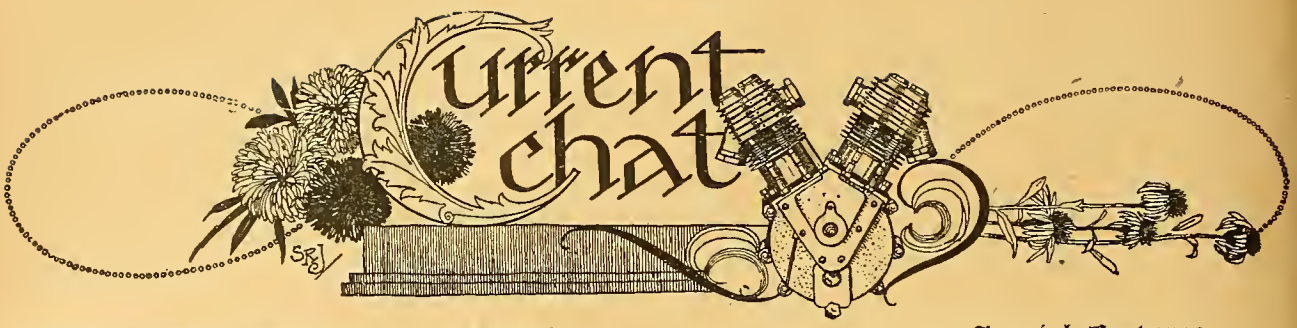
**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "IXION," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 5/-. By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.



## Times to Light Lamps.

| | | | |
|---|---|---|---|
| Feb. | 23rd | ... ... | 6.27 p.m. |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Land's End to John o' Groats.

Wednesday, July 12th, has been fixed as the date for the Land's End—John-o'-Groat's trial to be organised by the M.C.C. to celebrate its 21st birthday.

### Record Club Activity.

Sixty or so of Great Britain's 350 motor cycle clubs apparently held their annual general meetings within the last week or two; and in one or two cases reports were sent to us which would have required a page or so of *The Motor Cycle* apiece to publish them in full.

### British and American Miles.

English people in the past have been somewhat dubious about the wonderful speeds made in America. The other day an American racing man was discussing the astounding speeds made by small engined motor cycles in England, and remarked, "The British mile is shorter than our own." Investigation revealed that the fact was correct; but the British mile is only 0.18in. shorter Not such a very great difference after all!

### Well Done!

"For Sale—Baker's business, large oven; owner been in it for ten years." This advertisement appeared under "Parts and Accessories" in *The Motor Cycle* of the 9th inst. It will be, we fear, a severe shock to the amazing speed and fuel consumption heroes of our Correspondence columns.

### Cedos Developments.

Business, stock, plant, registered name, etc., of the Cedos motor cycle have been purchased by a London financier, and deliveries of a re-designed model with a detachable cylinder head will commence in three to six weeks time. Prices will be lower and the output greater; the works are now being re-organised under the direction of Mr. Ernest Smith, who was the designer of the original machine.

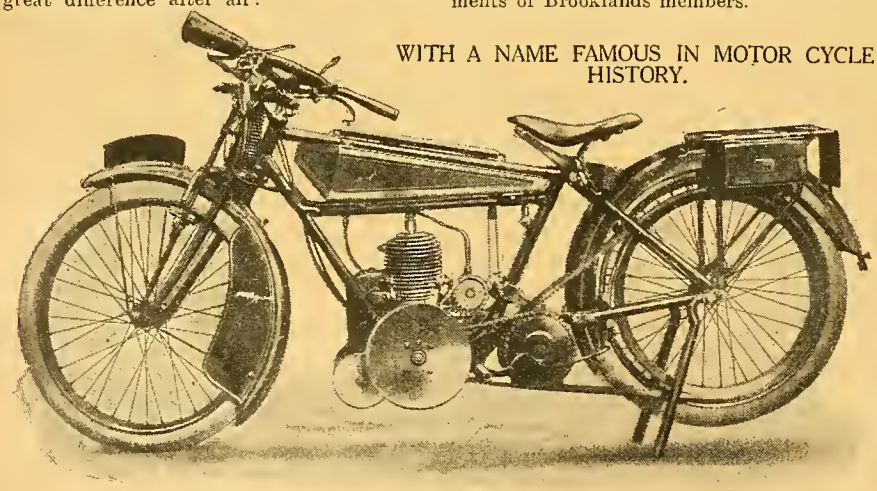
### To Popularise Brooklands.

It is proposed to admit people to the test hill at Brooklands on Sunday afternoons and to allow those who desire to go round the track to do so at a reduced fee. There will also be a band playing.

These innovations will be inaugurated shortly before Easter and further particulars will be published in *The Motor Cycle* in due course.

The catering for Brooklands track has been undertaken by Messrs. Jones, of Kingston, who, we believe, are taking special pains to look after the requirements of Brooklands members.

WITH A NAME FAMOUS IN MOTOR CYCLE HISTORY.



White & Poppe four-stroke engines were in the front rank in the early days. The name now re-enters the motor cycle field, gracing a two-stroke engine which is giving remarkable results, almost unbelievable rates of revolution and a degree of silence not usually associated with units of its type. The machine in which it is shown is obviously merely a testing assembly.

## Special Features.

**MOTOR CYCLES FOR BOYS AND GIRLS.**
**A FOUR-CYLINDER TWO-STROKE.**
**THROUGH THE WYE VALLEY.**

### Motor Cycles in France and Germany.

In 1921 there was one motor cycle in Germany for every 2,244 inhabitants, while in France, where the population is considerably less, there was one motor cycle per 738 inhabitants.

### To Followers of Rugby.

Motor traffic attending the International Rugby match at Twickenham on Saturday next (25th) should follow the route *via* Whitton, recommended by the A.A., and not use the route covering Hill View Road, London Road, and Mogden Lane.

### Prize for First Climb of New Hill.

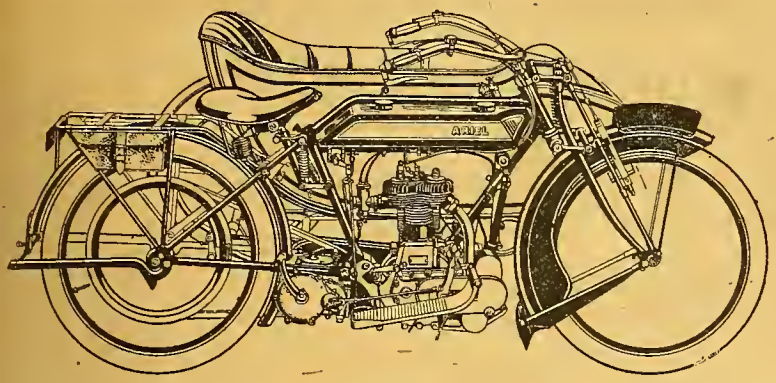
A special prize is to be given to the driver of the first sidecar outfit to climb the new Kent hill "find" that figures in the Woolwich Club's opening invitation run on March 12th. The discovery, first brought to light in the Correspondence columns of *The Motor Cycle*, is arousing great interest, and the officials are receiving many inquiries.

### Motorists and the Eastbourne Bench.

In cases of highway obstruction by a motorist it is contended that there is no legal obligation for the defendant to be present in person, and he may avail himself of the option of being represented by a solicitor. The A.A. has been granted a rule *nisi* by the Divisional Court for a mandamus against the Eastbourne Bench to compel them to hear a case of alleged highway obstruction. The Bench has already refused to dispose of the case on four occasions because the defendant did not appear in person.

### Manufacturers and Motor Licensing.

At a meeting of the Administrative Committee of the National Union of Manufacturers the following resolutions were passed: (1.) "That the existing system of licensing motor vehicles is causing serious injury to the motor and kindred trades, and, incidentally, restricting transport, manufacture, and the export trades. (2.) The registration book has been proved to serve no useful purpose and should be withdrawn, as it is a handicap to the motor trade and interferes with the freedom of buyer and seller. (3.) That makers and sellers of motor vehicles should be enabled to register in the first place in the name of the purchaser."



This sidecar combination has won a position for itself by sheer merit. It is famous for its unvarying reliability, and is known as the

# Standard

# ARIEL

## 3½ h.p. Touring Model

**Price of this 3½ h.p. model: Solo, £95; Comb., £125**

A special form of this machine is also made, with several modifications, and is known as the Sports Model.

**Price £87 10s.**

*Other Ariel prices are:—*

4½ h.p. (chain-drive) single, **Solo, £105; Comb., £140**

6-7 h.p. Twin (belt-drive), **Solo, £110; Comb., £140**

6-7 h.p. Twin (chain-drive), **Solo, £117 10s.; Comb., £152 10s.**

8 h.p. Twin (chain-drive), **Solo, £125; Comb., £160**

Riders who desire a mount of the higher-powered class, but who wish to ensure getting the same qualities that have always distinguished this model, have a choice of the 4½ h.p. chain-drive; 6-7 h.p. Twin (in both the belt and chain-drive forms) and the 8 h.p. Twin (M.A.G. engine). All Ariel models are illustrated and described in the 1922 list, free on request.

**ARIEL WORKS, Ltd., 3, BOURNBROOK, BIRMINGHAM.**

## 180 Miles per Gallon

The McKenzie Safety Lightweight has revolutionised motor cycling just as the Ford revolutionised motoring.
Mass produced at the famous Hobart Coventry factory, this wonder machine is a triumph of sturdy construction, lightness and serviceability. The remarkable 1¾ h.p. two-stroke engine with Fellows Magneto, "Vici" Carburettor, etc., gives sufficient power to mount any ordinary hill and will *maintain* a steady 25 m.p.h. on the level.

The
# McKENZIE
**Safety Lightweight Motor Cycle**

weighs only 75lbs., is suitable for lady or gentleman, and is sold complete with tools, ready for the road. Costs no more than a really dependable pedal cycle, yet gives ten times the service and pleasure. Not an adapted "push" cycle, but a complete motor cycle in every respect.
The McKenzie is worth investigating! Send a postcard to-day for full information to

### British Industries Fair.

Next Monday the 1922 British Industries Fair opens concurrently at the White City, London, and the Castle Bromwich Aerodrome, Birmingham.

### Contrast in Trials.

No greater contrast is imaginable than last Saturday's trial of the Essex M.C. and the previous week-end's event of the Coventry club; the former was the more sensible, but the latter was more enjoyable.

### Midnight Police Activity.

Pouring rain at 11 o'clock at night does not, according to a reader's warning letter, deter the Gomshall, Surrey, police from holding motor cyclists up for speed, braking and obscured number-plate offences.

### 1922 Portents.

It does not require any great discernment to see that enthusiasm is higher than ever in the motor cycle world. Everyone is tired of waiting for what is called stabilisation, and directly warmer weather comes sales of new and second-hand machines must move with a rush.

### Improving Countisbury.

A scheme is in hand to improve Countisbury, the famous North Devon Hill. Many of the worst bends are being straightened and a wall built in place of the banks of brambles. On certain stretches the hill will be widened. No doubt the widening of this notorious hill will be appreciated—but stone walls in place of brambles——!!

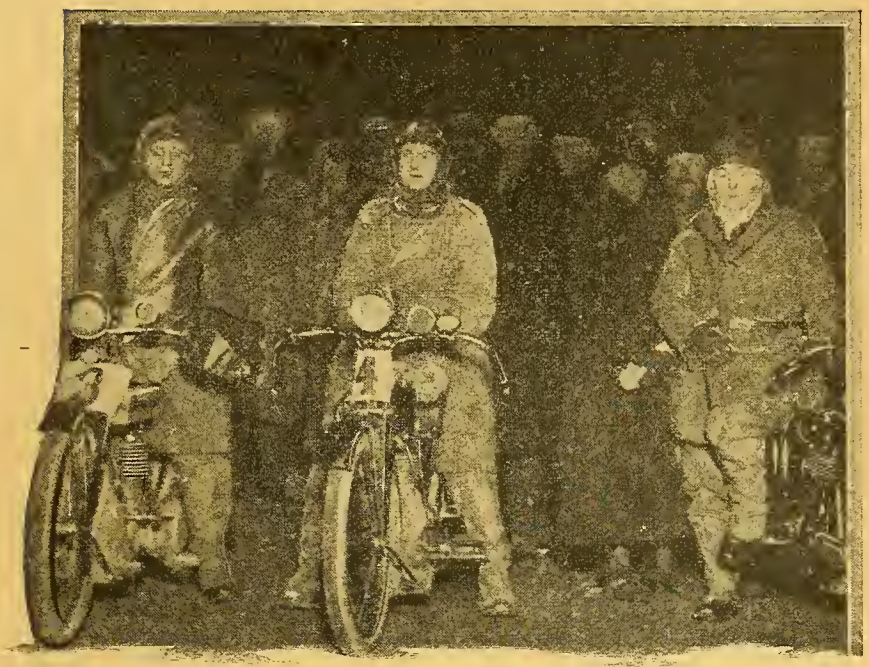
### Brooklands as a Society Rendezvous.

As the result of the Duke of York's forthcoming visit to the Essex M.C. meeting at Brooklands, it is hoped that race meetings on the track will eventually become fashionable social functions after the style of Ascot and Henley. Arrangements for the event in question are going on apace, and we understand His Royal Highness is taking more than a superficial interest.

### Midland Freak Trial Results.

J. A. Watson-Bourne (8 Brough Superior) proved the winner by an easy margin of the solo championship trial described last week; he retained 195 marks out of an initial 200. The others in order of merit were:

C. N. Green (5-6 Rover), 185; L. Crisp (4½ Humber), 183; D. Brandish (4 Triumph), 178; J. N. Roberts (2½ New Imperial), 179; R. Mathers (3½ Rudge), 177; E. A. Barnett (2¾ Francis-Barnett), 176; W. L. Danskin (3½ Rudge), 175; R. Elliott (4 Rover), 174; D. A. Atkin (2¾ Hobart), 173; R. Grindlay (4½ Humber), 173; F. T. Sibley (3½ Rudge), 172; A. P. McGowran (4 Triumph), 172; A. Maclennan (3½ Triumph), 169; F. Arbuckle (4½ Humber), 165; P. H. Johnson (3½ Rudge), 165; M. G. Scally (4½ Humber), 165; E. H. Broughall (3½ Coventry Challenge), 163; L. Hathaway (4 Triumph), 163; J. Hardy (4 Triumph), 162; C. Little (5-6 Coventry Victor), 158; W. A. Jones (4 Triumph), 155; J. W. Moxon (2¾ Coventry Eagle), 155; G. Packman (8 Matchless), 152; R. B. Roberts (4 Triumph), 151; K. Hazlewood (8 Hazlewood), 149; S. Wright (4½ Humber), 148; R. Wright (4 Triumph), 144; P. L. Mayo (2½ Coventry Eagle), 141; Stretton-Ward (4 Triumph), 140; E. Poppe (2½ White & Poppe), 136; H. S. Perrey (4½ B.S.A.), 132; A. Elliot (4 Rover), 131; S. A. Tomson (4 Triumph), 125; G. L. White (2¾ A.J.S.), 122; W. Hancox (2¾ Douglas), 121; G. M. Ravenhall (4 Rover), 114; G. F. Evans (3½ Sunbeam), 94.



AN ALL NIGHT RELIABILITY TRIAL. A flashlight photograph taken at the start of the Hull M.C.C. night trial to York and Scarborough, in which 15 competitors started and five completed the course. Some of the party encountered snowdrifts on the Yorkshire wolds.

### Godalming Again.

Godalming police are very zealous in enforcing the minutest details of the Motor Car Act. Recently a rider was stopped late in the evening during the week-end because his number-plates were insufficiently illuminated. The police carefuly inspected his machine as to the efficiency of the brakes and silencer, with the result that he was reported for failing to illuminate his numbers properly, and for using only one brake.

### Output of Motor Cycle Industry.

By a process of deduction, *The Autocar* has arrived at an approximate figure representing the output of British cars and motor cycles. The following shows how this was done in the case of motor cycles:

| | |
|---|---|
| Number in use, Nov., 1921 .. ... | 355,000 |
| ,, ,, ,, April, 1921 .. .. | 185,000 |
| (Transport Ministry's Returns) | |
| Brought into use in the interval .. | 170,000 |
| Deduct Imports: April—Nov., 1921 | 1,909 |
| (Board of Trade Returns) | |
| | 168,091 |
| Add Exports: April—Nov., 1921 .. | 7,093 |
| (Board of Trade Returns) | |
| Output for 8 months (approx.) .. | 175,184 |
| Approximate monthly output .. | 21,898 |

### Open Trial in the Peak District.

Arrangements for an event on a big scale are being made by the Leicester and District M.C., which has charge of the East Midland Centre A.C.U. open trial on March 25th. The route will be in the Peak District, and competitors will run through the towns of Loughborough, Nottingham, Derby, as well as Leicester, the starting and finishing point. Headed by the Raleigh Cup (pre-war value, £100), the award list is of imposing dimensions.

### In this Issue.

Proud parents who hesitate to buy their boy or girl a motor cycle should read the article on page 226, by Col. Brereton, chairman of the A.C.U.

A reply to Mr. B. H. Davies' article on the difficulties of a T.T. race for private owners appears on page 231.

Particulars of two interesting motor cycles appear this week: one a 4-cyl. 2-stroke designed by Prof. A. M. Low, and the other a sheet steel machine constructed by two enthusiasts in their spare time (page 230).

What one can obtain, for a given sum of money, in the way of secondhand motor cycles, may be seen at a glance on page 239, whereon a list, selected from last week's advertisements, appears.

### South Birmingham Sporting Trial.

More marks were lost in a surprise brake test in last Saturday's opening trial of the South Birmingham M.C.C. than at any other point on the 42-mile route, which included Swan, Beacon, Gravel Pit and Gaby Glide Hills. J. Stretton-Ward (4 Triumph) won the cup for the best performance of the day, and the other results were as follows:—

Club silver medal for next best solo performance: B. Burgoyne (3½ James).

Club silver medal for best solo performance (two-speed only); L. Cox (3¾ Scott).

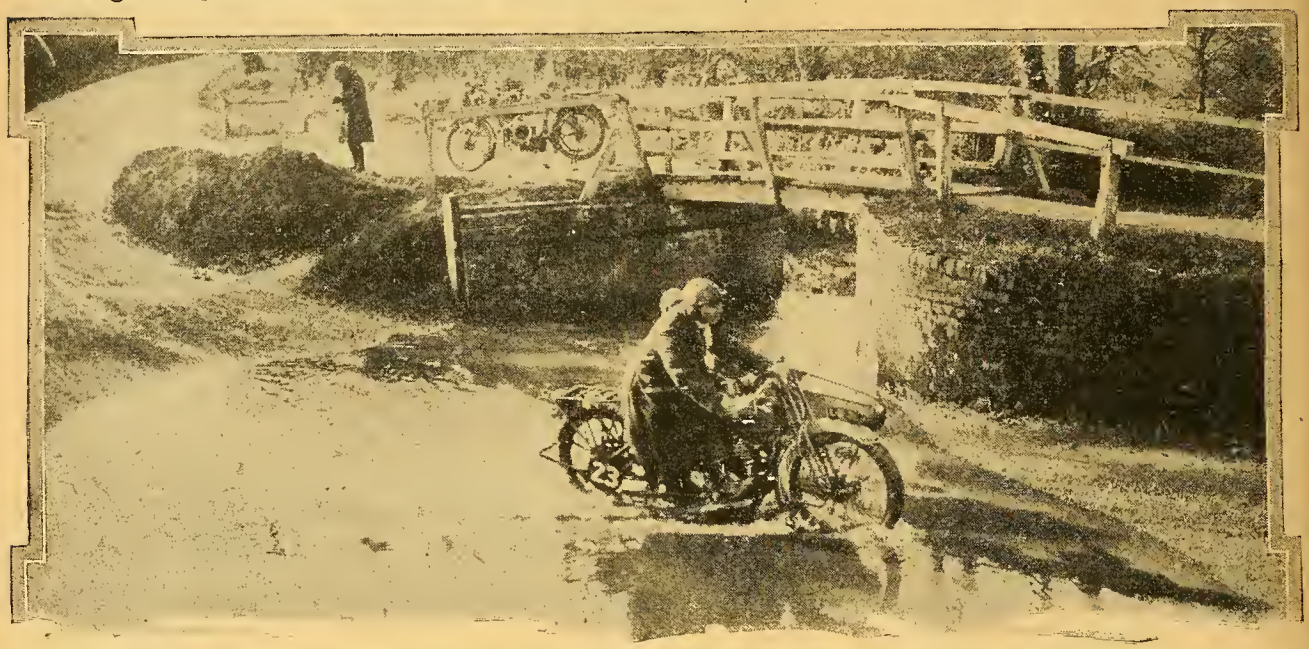
Silver medal for best 350 c.c. sidecar: N. Hall (2¾ O.K. sc.).

Silver medal for best 350 c.c.-1,000 c.c. sidecar: H. Perrey (6 B.S.A. sc.).

Bronze medals: J. Barrett 2¾ O.K.), W. Handley (2¾ O.K.), H. Uzzle (8 New Imperial sc.).

# TOURING CONDITIONS IN ESSEX TRIAL.

## Large Proportion of Finishers in Essex M.C. Winter Trial in Epping Forest District.



The only watersplash was not deep and there was no doubt about the majority of crossings. L. F McCardie (7 Indian sidecar) taking it slowly.

ON the programme of last Saturday's trial of the Essex M.C. it was said that the test was intended to demonstrate the capabilities of the modern motor cycle under ordinary touring conditions. This it did most effectively, although it must be confessed that many a day on an average private owner's holiday tour is often infinitely more severe than the Essex competition.

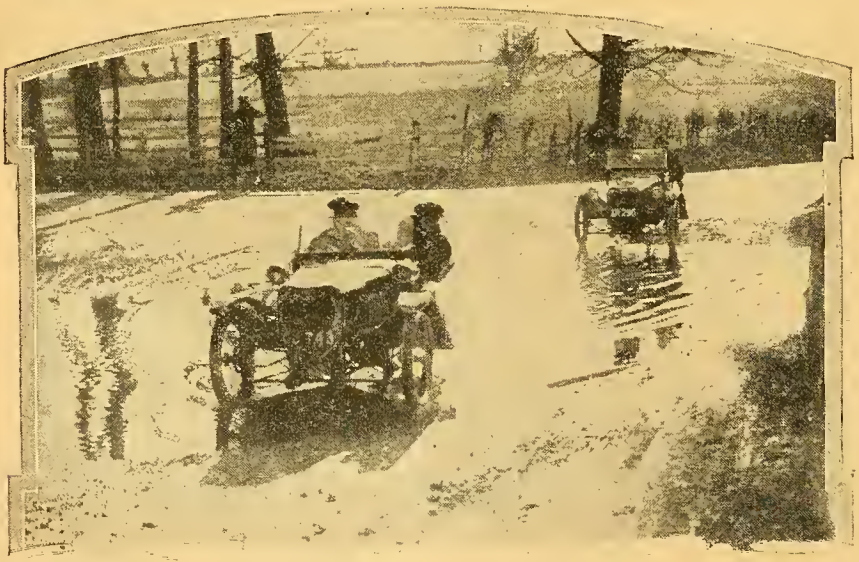
Woodford, on the London edge of Epping Forest, was the scene of the start of a two-lap course, totalling 109 miles. There were no freak hills, nor "colonial" sections, and greasy roads presented the only serious obstacles to a non-stop ride at the scheduled 20 m.p.h.

### Various Driving Tests.

In order to find a winner in each class, however, various tests were included, the first being a fast and slow hill climb on Mott Street Hill five miles from the start; competitors were required to cover the slow portion, which naturally came first, at less than 5 m.p.h. In the 250 c.c. class, F. W. Applebee (2¼ Levis) just succeeded in beating his only opponent, E. J. Anderson (2¼ New Imperial).

In the next class W. C. Hemy (2¾ A.J.S.) was fastest, but apparently he was also too fast in the slow section, and the honour will go to C. Pearson (2¾ Douglas). H. W. Harrington (2¾ Douglas), who was behind time already, stopped, and a little later retired.

Two Indian Scouts and a Triumph competing together resulted in victory for one of the former, driven by D. H. Davidson. Of the sidecars, C. G. Pullin (6 Douglas sc.) streaked up easily fastest in the eyes of the spectators, but E. A. Bridgman (7 Indian sc.) actually recorded a better time by the simple expedient of opening out on the slow portion as soon as his passenger had calculated that sufficient time had elapsed to avoid exceeding the maximum speed. The 4¼ h.p. Hawker outfit, in the hands of L. F. Peatty, emitted sounds suspiciously like "conking."



H. W. Holmes and S. A. McCarthy on Morgans at the watersplash, near Harlow.

### A Star Performance.

Fastest time of all the motor cycle entries, however, was undoubtedly made by S. M. Greening, on a Sunbeam fitted with the latest sporting 3½ h.p. J.A.P. twin engine.

Low Hill, thirteen miles further on, had been originally chosen for the flexibility test, but was ruled out on account of its bad surface. As it was, everybody climbed it with ease. Near Parndon, a watersplash provided the press photographers with something more "live" than main road pictures, but the solitary

**Touring Conditions in Essex Trial.—** observer did not unsheath his fountain pen. Just beyond, however, a Coventry Victor outfit was noted at a standstill, while its driver, J. Wallis, cleared a choked petrol pipe; eventually he retired, owing to persistent recurrence of this trouble. F. W. Applebee (2¼ Levis) was also unfortunate, being brought to a stop by chain trouble. Incidentally, the veteran rider provided one of the only thrills of the day—by pilling up in front of the official hotel at the lunch stop. There were no casualties.

### Same Route Repeated.

Exactly the same route was covered in the afternoon, ten seconds being allowed to start up cold engines.

Several lost marks, including two who had otherwise been doing well—W. C. Hemy (2¾ A.J.S.) and C. Pearson (2¾ Douglas).

Mott Street this time was marked off for a very short acceleration test. The competitors were timed from a standing (clutch) start, and, with two exceptions, those who distinguished themselves in the morning repeated their successes. On this occasion S. J. Marks (4 Triumph) and C. G. Pullin (6 Douglas sc.) gained top marks in their respective classes. Some amusement was caused by C. W. Bairstow (7 Indian sc.) removing his gloves to gain greater freedom of action and then making an extremely slow get-away. Alan Hill's Indian was also none too impressive, and there were symptoms of carburetter trouble.

Since the roads had dried somewhat, little more need be said concerning the afternoon's run. G. E. Cuffe (2½ Metro-Tyler) lost his non-stop through a puncture, and others had minor worries; but, generally speaking, the survivors toured round to the finish dead on time.

Results:

250 c.c Class.—E. J. Anderson (2¼ New Imperial), silver medal.

350 c.c Class.—C. Pearson (2¾ Douglas), silver medal; W. C. Hemy (2¾ A.J.S.), bronze medal.

500 c.c Class.—S. M. Greening (3½ Sunbeam-J.A.P.), silver medal.

750 c.c Class.—S. J. Marks (4 Triumph), silver medal.

600 c.c. Sidecar Class.—L. F. Peatty (4¼ Hawker sc.), silver medal.

1,000 c.c. Sidecar and Threewheeler Class.—E. A. Bridgman (7 Indian sc.), gold medal; C. G. Pullin (6 Douglas sc.), silver medal; H. W. Holmes (8 Morgan), bronze medal.

# A RECORD ENTRY IN A CLASSIC EVENT.

## 208 Riders Entered for Next Saturday's Colmore Cup Trial.

ALTHOUGH the present-day arrangement to limit the number of open trials, which exists between the Manufacturers' Union and the A.C.U., has shorn some of the historic events of their "open" status, it cannot be said that the Colmore Cup Trial, always the first big event in the spring of the year, has suffered in support, a fact which the list given below emphasises.

From 1912 to 1914 this trial attracted record entries. In 1920 it was held for the last time as an open event. Since that date it has become a trial open to members of those clubs constituting the A.C.U. Midland Centre; the organisation, of course, being in the hands of the Sutton Coldfield and North Birmingham Automobile Club.

For this year 208 entrants have made application to face the starter on Saturday in order to compete for the Colmore Cup over the familiar course in the Cotswold Hills.

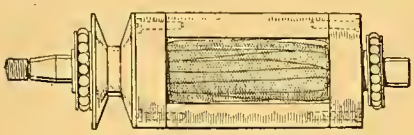
# A DYNAMO LIGHTING SET FOR 25/-.

## How a Reader Converted a Scrap Magneto into a Simple and Effective Lighting Dynamo.

THE following is a description of how a perfectly satisfactory dynamo lighting set may be constructed at the comparatively low cost of 25s. by any amateur motor cyclist, however slight his knowledge of electricity may be.

The first essential is to beg, borrow, or steal any old motor cycle magneto. In the writer's case, one was obtained from the Slough depôt for 10s.

Such a magneto need not have contact-breaker, condenser, or even windings, only the magnets, armature,



Complete armature before commencing operations.

and end plates being necessary, and, of course, the slip ring and brush holder.

### Method of Construction.

Unscrew the brush holder and one end plate. The armature can then be withdrawn, and a piece of soft iron inserted in its place, this being done to prevent weakening of the magnets due to the large air gap.

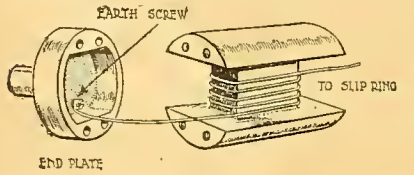
To dismantle the armature, first remove the slip ring, usually held in position by the end ball-race bush, which is a driving fit on the shaft

Then remove the end plates, which are screwed to the armature core, but first mark their relative positions by making a couple of scratches, or a file cut, across the core and end plates.

If the armature is wound, first remove the outer insulation, then cut off the fine secondary winding with a sharp penknife, as it will be found impossible to unwind it. The primary winding, which is usually of 24 gauge enamelled wire, can then be unwound, until the whole of the armature core is stripped of wire, leaving only the insulating material between the iron and the winding space.

### Rewinding the Armature.

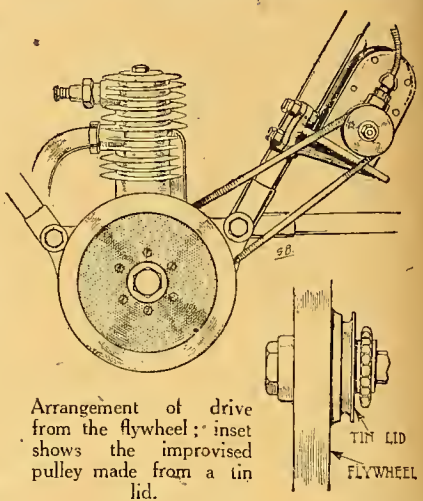
Rewind the armature in any direction with 20 S.W.G. single cotton-covered copper wire, leaving



End plates and slip ring removed showing commencement of the rewinding

about six inches of spare wire for an earth connection. The best method of winding is to hold the wire firmly with one hand and turn the armature with the other; do not hold the armature and wind the wire round it as one would roll up a ball of wool, or else the wire will kink and damage the insulation.

Wind on the wire in even layers, and continue until the armature is nearly full; cut off the wire, leaving about 12in. of free end.

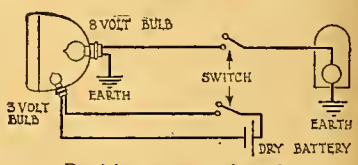


Arrangement of drive from the flywheel; inset shows the improvised pulley made from a tin lid.

Obtain a piece of ½in. cotton tape and cut a small hole in it about 3in. from one end; pass the free end of the wire through this hole, and bind the tape firmly over the winding and secure with a little seccotine.

Then replace the original outside insulation, or, failing that, wrap the whole of the winding over with adhesive tape, taking care that no part of the winding is of a greater diameter than the iron core of the armature, or else it will foul the pole pieces.

Fasten the beginning of the winding to the shaft end-piece which fits on the end of the armature core furthest away from the slip-ring end. A set screw is usually fitted for this purpose, and "earths" one end of the winding to the frame. The other end of the winding is threaded through the hole in the other end plate and secured to the slip-ring.



Rewiring system adopted.

The end plates may then be screwed into position, and the amature replaced in the frame of the magneto, the bearing plates fixed in position and the brush and brush-holder replaced.

After assembling, twist the armature round with the fingers and make sure that no part of it rubs against the pole shoes.

### Driving Arrangements.

The method of driving has now to be determined upon, and the type of bulb to be used. For a similar

**A Dynamo Lighting Set for 25/-**

dynamo, run on a motor cycle with an outside flywheel, the writer used the following method.

A small brass pulley of 2in. diam., with a V groove, was fixed to the armature shaft, in place of the usual sprocket, and the dynamo was then supported on a bracket between the back mudguard and the down tube, the pulley being placed in line with the inside edge of the flywheel. The corresponding pulley on the flywheel was made from the lid of a syrup tin held in place between the engine sprocket and the flywheel, the flange on the lid forming a pulley with the inside of the flywheel, a ¼in. leather belt being used.

**Selecting a Bulb.**

If a bulb be used which will take the whole of the available current generated, it will be found that practically any voltage bulb can be used (within certain limits) due to armature reaction on the permanent magnet field, which also provides a perfectly automatic control preventing the burning out of the bulbs used.

This feature will perhaps be better explained if the experiments carried out by the writer are given :—

It was found that at an engine speed corresponding to about 20 m.p.h. on top gear (5-1) a voltage of 12 volts was obtained (read by voltmeter). A 12-volt ½-amp. lamp was tried, but burned out at a speed of about 30 m.p.h., which showed that the whole of the available current was not being used. A 12-volt 1-amp. lamp was next used, which lit up brilliantly at 20 m.p.h. and did not burn out at higher speeds. It was therefore concluded that the maximum output obtainable was approximately 1 amp., and an 8-volt 1-amp, bulb was installed. This bulb reached its maximum brilliancy at about 14 m.p.h., and maintained a perfectly even light at all speeds above 14 m.p.h. without burning out.

This lamp has been in constant use during the whole of the winter with an average night riding of three hours per week, and shows no signs of blackening. A 4-volt 1-amp. lamp was also tried, without injury to the lamp, and reached its maximum brilliancy at about 6 m.p.h., but was discarded owing to its low maximum candle power (*i.e.* 4 c.p.).

It will be seen from these experiments that, provided the whole of the current is taken, bulbs of any voltage below the maximum volts obtainable may be used to suit the individual rider's idea of the best speed at which the maximum light is required.

The maximum current (in the absence of an ammeter) may be obtained by the same methods at the cost of a lamp or so.

For use when the engine is running, a 4-volt dry battery may be installed, lighting a small bulb in the bottom of the head-lamp, which will give sufficient light to act as a stand-by in case of breakdown of the main lighting system.

Balance-sheet of total cost :—

| | £ | s. | d. |
|---|---|---|---|
| Magneto | 0 | 10 | 0 |
| Magnets re-magnetised | 0 | 2 | 0 |
| ¼lb. 20g. S.C.C. wire | 0 | 2 | 4 |
| 1 12-volt ½-amp. bulb (burnt out) | 0 | 1 | 8 |
| 1 12-volt 1-amp. bulb (discarded) | 0 | 1 | 8 |
| 1 8-volt 1-amp. bulb (in use) | 0 | 1 | 8 |
| Dry battery and bulb | 0 | 3 | 0 |
| 2 yards flex | 0 | 2 | 0 |
| Total | £1 | 4 | 4 |

In conclusion, I would strongly advise any motorcyclist who may manufacture such a lighting set to invest a few extra shillings on an electric lamp of the focussing type with parabolic reflector. Such a lamp will give 100 per cent. more light than a converted gas lamp, and may be obtained at any of the large stores for 30s. or so. W. R.

# A SIDECAR FUEL CONSUMPTION TEST.

FOR the past seven or eight weeks a lively controversy has been raging in our correspondence columns regarding the fuel consumption of various popular sidecar outfits. In an attempt to settle the question, one of the original participants in the discussion, Mr. H. S. B. Booth, decided to organise a private test open to private motor cyclists.

This fact was mentioned in *The Motor Cycle*, and quite a considerable amount of interest has been aroused in the affair. Now, however, things have taken a somewhat curious turn, as the following letter, addressed to us from Mr. Booth, 285, Harrow Road, London, W.9, indicates :—

"I enclose a copy of a letter I have received from the A.C.U. respecting the above test which I am organising. Would your readers kindly give me their observations thereon?

"Surely we are not coming to the time when we must apply to the A.C.U. for 'permission' to use our machines? I can imagine that if the A.C.U. take to themselves more power we will just have to patronise only those hotels bearing the A.C.U. emblem. As to 'infringement of their rules,' the remark is absurd, as I am neither interested nor concerned with the rules until I subscribe to them.

"The test will take place whether the A.C.U. agrees, dissents, or remains neutral, and particulars of the test will be sent to any motor cyclist who feels that he can use his machine in any way he chooses. Stamped addressed envelopes can be forwarded to me at the above address."

[COPY.]

The Auto Cycle Union,
83, Pall Mall, S.W.1.
February 13th, 1922.

H. B. Booth, Esq.

Dear Sir,—My attention has been called to a paragraph in the current issue of *The Motor Cycle* in which it states that a private fuel consumption test which you are organising has now been opened to all makes of sidecars and a limited number of solo machines.

I would point out that such a competition is an open competition and cannot be held without infringement of the rules of the Auto Cycle Union unless a permit has been previously applied for and granted.

Further, having regard to the fact that the number of open competitions is strictly limited, I doubt whether, even if you made application for a permit, my committee would be prepared to grant it.

I shall be much obliged if you will kindly send me full particulars as to what you propose doing in this matter.

Yours faithfully,
T. W. LOUGHBOROUGH, Secretary.

7 h.p. James Sidecar Outfit.

*SPECIFICATION.*

| | |
|---|---|
| *ENGINE: 73 × 89·5 m.m. = 749 c.c. V-twin.* | *GEAR BOX: James 3-speed, clutch and kick-starter.* |
| *CARBURETTER: Cox single lever.* | *FORKS: Brampton.* |
| *LUBRICATION: Drip feed.* | *WEIGHT: 296lb. (solo).* |
| *TRANSMISSION: ⅝ × ⅜in. chains.* | *PRICE: £160, solo; £195, sidecar (Magdyno extra).* |
| *TYRES: 28 × 3in.* | |

FROM time to time there has been considerable comment in our correspondence columns on the lack of British "big twins," except for one or two machines fitted with proprietary engines. To a certain extent the complaint is justified, if only engines of between 950 to 1,000 c.c. are entitled to the name of "big twin"; on the other hand, there are several all-British one-factory machines which are undoubtedly "big enough." A typical example of this type is the 7 h.p. James, and a recent road test has convinced us of the fact that it will answer all the requirements of nine out of ten sidecar drivers. Actually, the capacity of the James is 749 c.c. (73 × 89.5), but the 251 c.c. short of the 1,000 c.c. limit is not easily realised by the owner, except in the matter of fuel economy. Built as strongly and equipped as luxuriously as any outfit on the market, the twin James supplies confirmation of the fact that capacity is not necessarily proportionate to power.

Following conventional lines, except for the rectangular cylinder fins, the engine is distinctive on account of its clean exterior, a feature which is assisted in no small degree by the incorporation of neat cylindrical valve and tappet casings. These covers, which are quickly detachable, assist very materially in excluding grit from the valve stems and guides, and in assisting lubrication of these important parts. Apart from the appearance of the before-mentioned practical features, this should make for greater ease in cleaning, a point which is not without importance to the fastidious owner. The magneto (or Magdyno in this particular case) lies in a protected position behind the rear cylinder, and the chain case enclosing the drive is commendably free from excrescences.

**Gear Box Design.**

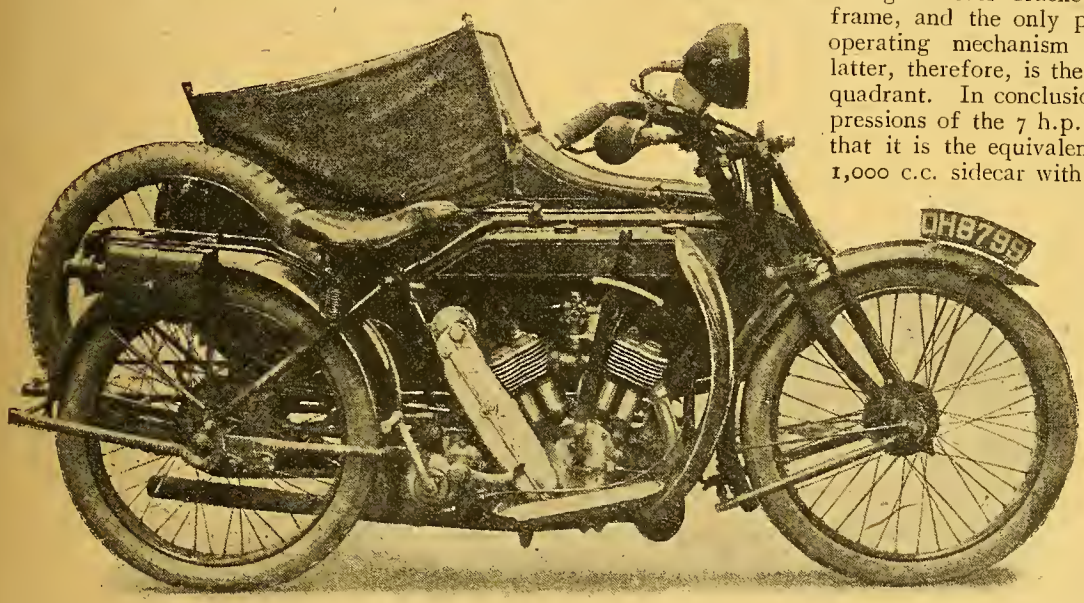
Gear box, clutch, and starter are on generous and massive lines, though the last-mentioned might advantageously be provided with an increased range of action. Clutch control, in addition to the normal handle-bar lever may be effected by a conveniently placed heel pedal at the rear of the right footboard, and we found the clutch sweet in action and the gears easy to change under all circumstances. As has already been indicated, the makers have not over-estimated the capabilities of their production by rating it at 7 h.p. On a 50-mile journey, repeated on the following day on a 4 h.p. solo machine, the heavy sidecar outfit was only seven minutes slower, and on both occasions there were excellent reasons for being as quick as possible. Of the well-finished sidecar our passenger spoke most highly, while the driver's comfort is attended to by spring footboards, long leg-shields, patented saddle suspension and large diameter tyres.

Despite full equipment, including Lucas Magdyno, and spare interchangeable wheel, the 7 h.p. James is undoubtedly a fast machine. It will negotiate all normal hills on top gear, and the average single-figure gradient can be climbed at speeds well up to the legal limit on the middle ratio, the lowest gear being purely an emergency fitting, though nevertheless useful for starting purposes. Control is simplified as far as possible by a Cox single-lever carburetter, which is conveniently adjusted to provide nice slow running when closed down. Neither engine nor gear box is noisy mechanically, and the exhaust is well silenced. Throughout the whole range of speed (a wide one) there is no appreciable vibration, and although there is a slight snatch in the chain transmission at anything

**Road Tests.—** below about 14 miles an hour on top gear, this is fully compensated by the sweet running of the machine on middle gear. It is safe to say that if the average owner made more use of his lower ratios, he would extend the life of his machine and considerably reduce tyre wear. Special attention must be called to the finish of the James machines; the black and brown with buff panelling and gold and red lining give a handsome effect, which at the same time does not show unduly the ravages of dust and dirt, while the cast aluminium gear change quadrant and the polished magneto chain case of the same material, together with the nicely rounded and buffed crankcase and gear box castings, all enhance the handsome appearance.

Even in winter Warwickshire lanes are not without their charms, and the 7 h.p. James enables one to cruise in comfort.

One feature which the twin James machines possess, and which is peculiar to themselves, is the mounting of the change-speed lever on a stud on the engine timing cover; the construction climinates a gear lever bracket clipped to the frame, and the only part of the gear-operating mechanism carried on the latter, therefore, is the afore-mentioned quadrant. In conclusion, our main impressions of the 7 h.p. James outfit are that it is the equivalent to a luxurious 1,000 c.c. sidecar with the performance of a sporting outfit.



The 7 h.p. James sidecar offers good protection to rider and passenger. Note the valve spring covers and position of spare wheel.

# MOTOR TAXATION IN IRELAND.

## General Feeling in Favour of a Tax on Petrol.

SO far the Irish Government has not given any indication of what its intentions may be with regard to the taxation of motor vehicles. The Government of Northern Ireland has decided to continue the licence tax on its present basis until an opportunity occurs of considering the whole question. It would seem likely that the Government of the Irish Free State may be inclined to adopt a similar attitude, and doubtless the new Irish Motor Legislation Committee will be able to voice the views of motorists in Ireland. As far as we are able to ascertain, there appears to be unanimity of opinion amongst Irish motor users of all classes that a reversion to the petrol tax would be preferable to the British system of taxation by horse-power, and we shall not be surprised to find that this view is urged on the Government. It remains to be seen whether the committee will be prepared to suggest a policy in respect of the taxation of imports. As this may be considered a political question, it is quite possible it may prefer to be silent on the subject.

Another point of much interest to motorists in Ireland to which the new committee will doubtless apply itself is the obtaining of a guarantee from the new Government that the proceeds of such duties as may be imposed will be applied to the improvement of Irish roads.—*The Autocar.*

# CLUB NEWS

Start of the Coventry Club's Sporting Trial.

### Annfield Plain and District M.C.

This club has recently held its first annual meeting, at which Mr. Percy Taylor-Smith, of Colepike Hall, Lanchester, was elected president. The financial statement, which showed a credit balance of £31 7s. 8d., was passed as satisfactory. It was unanimously decided to affiliate to the A.C.U. under Scheme A.

### Wolverhampton Auto-Nomads.

There was a good attendance at the annual general meeting held at the Talbot Hotel, Wolverhampton, on February 2nd. The Chairman, Mr. H. B. Piper, in dealing with a motion "that the club affiliate with the A.C.U. for competition purposes," called attention to the policy of the club as being especially constituted for social events.

### North Derbyshire M.C.C.

The annual general meeting was held on Tuesday of last week, under the chairmanship of Mr. T. J. Roberts, at the Portland Hotel, Chesterfield. Mr. A. W. Webb presented the balance-sheet, which showed a surplus of £31. Notice will be given of the opening run of the season, which will take place at an early date. Secretary's address: Mr. Chas. Ullyatt, 14, Sydney Street, Brampton, Chesterfield.

### Harrow and District M.C.C.

A committee meeting was held on the 10th inst., with Prof. A. M. Low in the chair. The first item of discussion was the programme of events for the coming season. Five of the General Committee were chosen to form an "Events Committee," with Mr. W. J. Philpott as "Events Secretary."

It was decided that the first annual general meeting should be held on Thursday, March 23rd, at the Club Headquarters, Swan Hotel, Sudbury.

### Motor Cycling Club.

With Brighton, as usual the destination, the opening will be on March 18th. The committee dinner, which past and present members of the committee are eligible to attend, will be held on March 1st, at Pagani's Restaurant, Great Portland Street, London, W.1, at 7 p.m.

### Yorkshire Centre A.C.U.

Mr. J. N. Longfield presided at the first annual general meeting, held in Leeds on February 6th, over fifty delegates being present. The secretary, Mr. W. A. Dovener, reported that 12 clubs constituted the centre at the beginning of 1921, and now the membership was 31. All the officials were re-elected.

### Yeovil and District M.C.C.

About fifty were present at the annual dinner and prize distribution on the 11th inst., Major H. C. C. Batten being in the chair.

It was mentioned at the dinner that the club was the third largest affiliated to the A.C.U. in the S.-Western Centre, and it was hoped that it would be the largest by next year.

### Goldthorpe and Thurnscoe M.C.C.

Over 100 members and friends spent a most enjoyable evening at the recent annual dance and presentation of prizes on the 8th inst. The M.C.s were Messrs. Robinson and Reeves.

Mr. T. Bull, the president of the club, presented two handsome cups, won by Messrs. A. E. Booth and F. Horn during 1921.

### Glasgow University M.C.C.

A non-stop reliability trial was held on February 11th over a course, 35 miles in length, of main roads and bye-roads, including a very tricky short "colonial section," which incidentally caused no little anxiety among the competitors. A very creditable performance was put up by R. W. Saunders (8 Matchless sc.), but the premier award went to C. Paterson (3½ Sunbeam sc.).

### Burnham, Highbridge and District M.C.C.

The inaugural meeting was held in the Royal Clarence Hotel, Burnham, Somerset, on Saturday evening, Mr. Ford Tilley presiding over a good attendance.

### Bolton and District M.C.

At a meeting held in the Central Restaurant on February 7th, which was well attended, many new members were enrolled, including several ladies. After the emendation of the rules, which was the chief business of the meeting, had been carried through, the opening run was fixed for Chester on March 5th.

### Atherton and District M.C.C.

Under the captaincy of Mr. H. Bleakley, the second run of the year took place recently, the destination being Blackpool. There was a good turn-out. The road selected was through Astley Bridge, Belmont, and Preston, which, nearing the latter place, was in a bad state. Further runs will be arranged at a meeting to take place the last day in this month.

### Blaina and District M.C.C.

Dr. Brown presided at the annual meeting and dinner, held at the Red Lion Hotel, on Tuesday of last week. There was a large attendance. The following officers were elected: President, Dr. Brown; chairman, Mr. L. Murray; treasurer, Mr. E. Campbell; vice-chairman and captain, Mr. A. Roberts; vice-captain, Mr. E. Beeson; secretary, Mr. H. Prichard, chemist, Blaina.

### Birmingham M.C.C.

There were well over fifty members present at the annual general meeting at the Imperial Hotel, Mr. A. D. Arter in the chair. The balance sheet was discussed, and it was seen that the club, after it had cleared all liabilities, had still a good balance, and also a large amount in War Stock and Bonds. The secretary then stated that during the last year they had admitted ninety-two new members, and that the club was the largest of its kind outside London.

**Club News.—**

### Ross and District M.C. and L.C.C.

Opening meetings point to a very strong membership being obtained for this newly formed club. Anyone desirous of joining should communicate with the hon. secretary, Mr. H. J. Llewellyn, Wilton, Ross.

### Banbridge and District M.C.C.

There were fully three hundred guests present at the recent club dance. The hall was decorated with good taste, an outstanding feature being the club badge, which was prominently displayed on the back of the platform.

### Western M.C.C. (Glasgow).

Close on three hundred guests attended the annual dinner which was held on Friday, February 3rd, in the Athenium Restaurant, Glasgow, under the chairmanship of Mr. W. N. Simpson, the club president. Evidence of the popularity of the club was furnished by the large attendance of English visitors from amongst those who were exhibiting at the Scottish Show. During the speech-making the Chairman referred to the new club house, the subscription list for which had been considerably over-subscribed.

### Bohemian M.C.C. (Southampton).

The opening trial of the year of this club will take place on March 26th. The route will be: Southampton, Chandlers Ford, Hursley, Winchester, Whitchurch, Newbury, Reading (lunch), and then *via* Basingstoke to Winchester.

### Newport and County M.C.C.

The recent annual general meeting gave promise of a very successful season. The hon. treasurer (Mr. E. A. Reid) presented a satisfactory report, showing a bank balance of £26. Approximately one hundred awards had been won by members during 1921.

### Connaught M.C.C.

A most successful evening was held at the Mars Restaurant, Frith Street, Soho, on the 9th inst., when some forty members of the club were present. Mr. J. Stanley Woodward, who is president, occupied the chair. The company was much intrigued by some novel competitions, particularly the following: Fifteen of the component parts which go to make the Connaught lightweight were numbered and handed round, and the correct title of each had to be written against its respective number on the form provided.

### Folkestone and District M.C.C.

On Wednesday of last week a very enjoyable evening was spent at Flessati's Restaurant, Rendezvous Street. The first half of the programme consisted of a whist drive, and a dance and concert followed.

### Woolwich, Plumstead and District M.C.

On Wednesday of last week the club held its annual dinner at the Shakespeare Hotel, Woolwich, well over a hundred members and friends spending a thoroughly enjoyable evening. That the club pays attention to the social side was proved by the number of ladies present; while the fine array of prizes for presentation indicated a very successful year of competitions, including, of course, the one-day open event. All the speeches were short, and not lacking in humour, and a concert programme, contributed by members and friends, brought the affair to a very happy close.

In the absence of Mr. T. W. Loughborough, Mr. Viney occupied the chair, thus setting himself the task of speaking on four separate occasions. He made some interesting references to motoring in earlier days. Other speakers were Messrs. W. Whittaker, C. R. Collier, T. G. Ross and H. H. Collier.

# ORIGINAL SPRING FRAME TESTS.

## Over Railway Sleepers and up a Vertical Bank on a McKechnie-Victor.

A CONSIDERABLE amount of attention has been attracted to the unusual suspension system embodied in the McKechnie-Victor motor cycle. It will be remembered that by the McKechnie system the rider, engine, and gear box are carried by a leaf spring extending from the head to the rear carrier, a rigid duplex frame connecting the rear wheel to the head and Brampton forks attending to the front springing of the machine.

### Preparing the Testing Track

It was with considerable interest that we undertook the observation of some tests to demonstrate the efficiency of this suspension. A special track was prepared with sleepers laid crosswise in groups. These sleepers varied from 4in. to 4½in. in height, and were spaced from 5in. to 24in. apart. Mr. F. W. Becker, who was handling the machine, rode it across these obstacles a number of times with the greatest of ease, and it was most interesting to watch the proceedings. Though the machine was ridden moderately fast, and though the wheels struck the obstructions violently the rider appeared to float and to be subjected to very little shock, the wheels bouncing independently of the main frame.

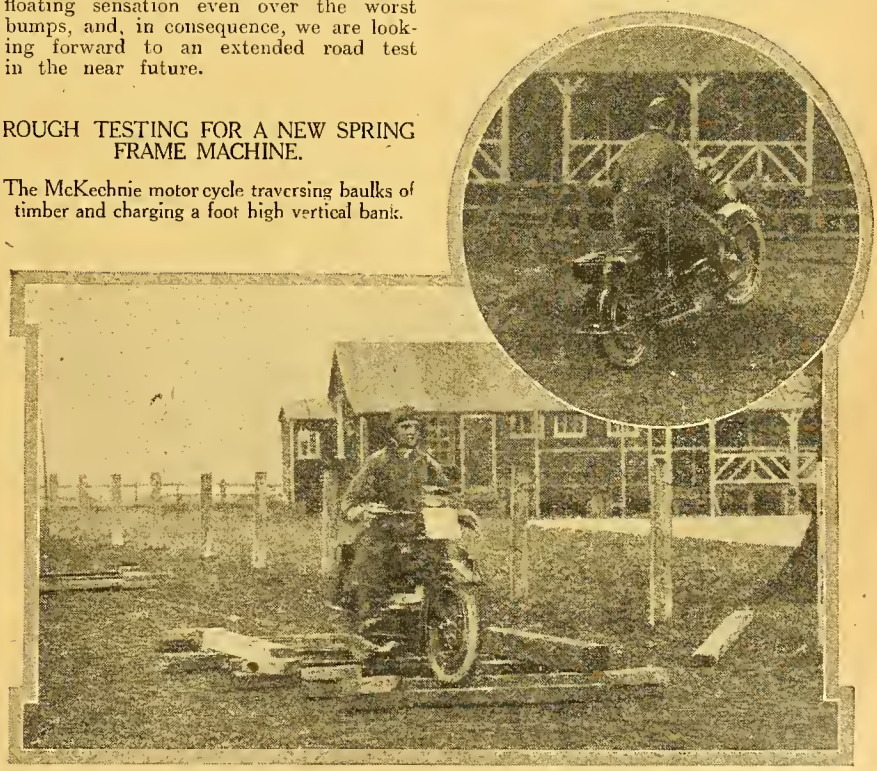
After giving many demonstrations, several attempts were made on an almost vertical bank of about 12in. in height. Each of these jumps was successful, and though the gear box hit the top of the bank, necessitating a steadying foot, the machine otherwise made light of the test.

We made a personal test of the machine, riding it fast round a field of ridge and furrow, and were delighted with the easy floating sensation even over the worst bumps, and, in consequence, we are looking forward to an extended road test in the near future.

Col. McKechnie, the inventor, intends to ride one of these machines in the forthcoming "Tour de France."

ROUGH TESTING FOR A NEW SPRING FRAME MACHINE.

The McKechnie motor cycle traversing baulks of timber and charging a foot high vertical bank.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of 'The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### BALANCING A SINGLE.

(1.) Will you give me the formula for balancing a single-cylinder engine? (2.) Is there any way of doing it without dismantling the flywheels and crankshaft?—C.G.B.

(1.) It is the usual practice to balance the whole of the revolving and somewhere about half the reciprocating weight. (2.) You will find it impossible to manage this without dismantling the crank case assembly.

### ENGINE WON'T START.

I have an a.i.v. Kerry engine, the horse-power of which I do not know, but the cylinder is about 2⅜in. bore. The timing is as follows: Exhaust valve opens four-fifths down the firing stroke, and closes when the piston reaches top dead centre (inlet stroke). Ignition: Advance and retard lever in centre, piston dead centre (top) points just breaking. The engine has started once, but will not start again. Could you help me in this matter?—H.F.

With the timing as described, and if everything is in good order, there is no reason why the engine should not run. The ignition should be timed so that the spark occurs on top dead centre of the compression stroke with the magneto control two-thirds retarded. Possibly the reason of the engine refusing to run after it first started is that the magneto timing has slipped, and it would be as well to verify this. You do not give us enough details to enable very much help to be given.

### CONVERTING AUTOMATIC VALVE TO MECHANICAL.

I am thinking of converting an old automatic valve engine to a mechanically operated overhead inlet valve. Do you think it practical and worth the expense? Should you think it worth while, please give number of degrees inlet cam requires setting with regard to exhaust cam.—H. G. C.

If you convert the engine to mechanical operation of inlet valve, the new cam should be so arranged as to commence to open the valve when the piston is on top dead centre of the induction stroke. The valve should then remain open through about 200 degrees of crankshaft rotation, closing when the piston has passed the bottom dead centre. There is no actual need, of course, to introduce another timing wheel and cam as you could arrange for the opening of the inlet valve from the existing exhaust cam by the use of a suitably shaped tappet lever pivoted correctly in relation to the cam. The position of the pivot will have to be determined experimentally.

## Important Dates.

**Sat., Feb. 25th—Colmore Cup Trial.**
**Sat., Feb. 25th, to Sunday, Mar. 5th—Brussels Motor Cycle Show.**
**Sat., Mar. 4th—Inter-Varsity Hill-climb.**
**Sun., Mar. 5th—Argenteuil Hill-climb (France).**
**Mon., Mar. 6th—La Turbie Hill-climb (Nice).**
**Wed., Mar. 15th—A.C.U. One-day Trial for Stock Machines.**
**Sat., Mar. 18th—Victory Cup Trial.**
**Sat., Mar. 25th—East Midland Centre A.C.U. Open Reliability Trial.**
**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Sat., April 1st—Western Centre A.C.U.—Open Reliability Trial.**
**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**
**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs. June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Fri., June 23rd, and Sat., June 24th—Irish twenty-four hour Open Reliability Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**

### TUBES FOR OVERSIZE TYRES.

Must one use a 28×3in. inner tube for a 28×3in. outer cover fitted on a 26×2¼in. rim, or will the original 26×2¼in. inner tube do? Would 26×3in. fit my 26×2¼in. rims, or would they be inadvisable?—T.M.G.

It is advisable to use a 28×3in. inner tube with the 28×3in. outer cover, but it is not absolutely essential; the 26×2¼in. will do. 26×3in. covers will not fit 26×2¼in. rims.

### SOME TRIUMPH QUESTIONS.

How are the front hub bearing cups of a Triumph motor cycle fitted in? Are they a driving fit, or are they shrunk in? Also, by increasing the number of friction plates in the Sturmey-Archer clutch, could I do away with the fibre rings, as I wish to convert the chain cover into an oil bath, which, I believe, is impossible at present.—F. H.

The cups are pressed into the hub shells, and you will find it quite an easy matter to drive them out; they are very easily tapered. You cannot alter the clutch in the way you suggest.

### STIFFENING A SIDECAR SPRINGING SYSTEM.

My sidecar has a transverse leaf spring at the back, and the top leaf has broken twice (load in sidecar, 11st.). There does not seem to be enough strength in the spring, as it flattens out straight when loaded, and when a pot-hole is encountered the spring bends beyond its limit, and so breaks. Would a central coil spring between the leaf spring and the bottom of the sidecar give the necessary support, or would it cause rolling?—C. M. H.

From your description, the springing certainly does not appear to be up to the load which it has to carry. The trouble might be eliminated by fitting an additional long leaf immediately below the top one. The coil springs which you suggest should certainly help matters; probably two 6in. apart would be better than a single central one, as there would then be no tendency for the sidecar body to roll about the central point, although the front springs should prevent this to some extent.

### VOLUMES AND PRESSURES.

Will you solve the following problem for me? A mixture (10%) of petrol vapour and air is compressed into a cubic foot at a pressure of 50 lb. per sq. in. The mixture is now exploded by means of an electric spark. What volume would the resultant gases occupy at the original pressure of 50 lb. per sq. in.? This seems a simple question, but I have been unable to get the information. —E. A. C.

You do not say whether the 10% mixture is by volume or weight. As it would be four times too strong by volume, weight will be assumed, however. Taking 10% by weight, it is still a very strong mixture, the amount of petrol being 50% above that required for theoretically perfect mixture—in fact just ouside the range of figures available for reference; moreover, the published figures deal with higher compression (5 to 1 ratio—approximately 70 lb.), and therefore an accurate result cannot be given. Working by extrapolation from the results of Tizard and Pye, for pure heptane, the explosion temperature will be in the region of 2,200° C., and the volume of the *cooled* gases after combustion 1.24 cu. ft. Assuming that the gases were at 20° C. before explosion, we have:

absolute temperature before = 293°
" " after = 2,473°

therefore $\frac{\text{volume after}}{\text{volume before}} = \frac{2,473°}{293°}$

or volume after $= \frac{2,473°}{293°} \times 1{\cdot}24 =$ approximately 10 cubic feet.

Owing to the lack of exact information, and the extreme richness of the mixture, one could not say more accurately than between 8 and 13 cu. ft. For further information you should read the paper on "The Character of Fuels," by Tizaud and Pye. This appeared in *The Automobile Engineer* of February, March, and April, 1921.

### AFTER FAITHFUL SERVICE.

I have a 1913 3½ h.p. J.A.P.-engined Royal Ruby hub geared motor cycle. It has been used to draw a heavy sidecar, which it has done successfully till just recently. Now it cannot take top gear without slowing down and knocking heavily. Compression when warm is weak. It runs very hot readily, despite plenty of oil. The bearings seem all right. What I would be glad to have your opiuion about is: (1.) Are those signs of wear irremediable by valve grinding (the seating looks very low) or fitting new piston rings? (2.) Should I get a new 3½ h.p. J.A.P. cylinder and valves, etc.? (3.) If I do so, shall I need a new piston? (4.) Would such new parts restore the original power of the engine, seeing that the big and little ends are all right? (4.) May I hope for, say, six years' satisfactory running by fitting those new parts (apart from anything else going out of repair).—D.P.K.

(1.) The details you give do not indicate sufficiently clearly the cause of the loss of power; but in all probability it is due to the wearing of some of the engine parts, most likely the timing gear and valves. If the exhaust valve seating is worn very low, this may be the root of the trouble, and, of course, the cams themselves may have worn badly, and, in consequence, have reduced the lift of the valves. (2.) It might not be necessary to have a new cylinder. It is quite likely that the makers could recut the valve seating, and you could easily renew the cams and rockers if necessary. (3.) It does not follow that a new piston will be needed in the new cylinder, but new rings will be advisable. (4.) If other parts of the engine are in good order, there is no reason why you should not have the same service after fitting a new cylinder, or otherwise having matters put in order, as you did previously.

### STRENGTH AND WEIGHT OF FRAME.

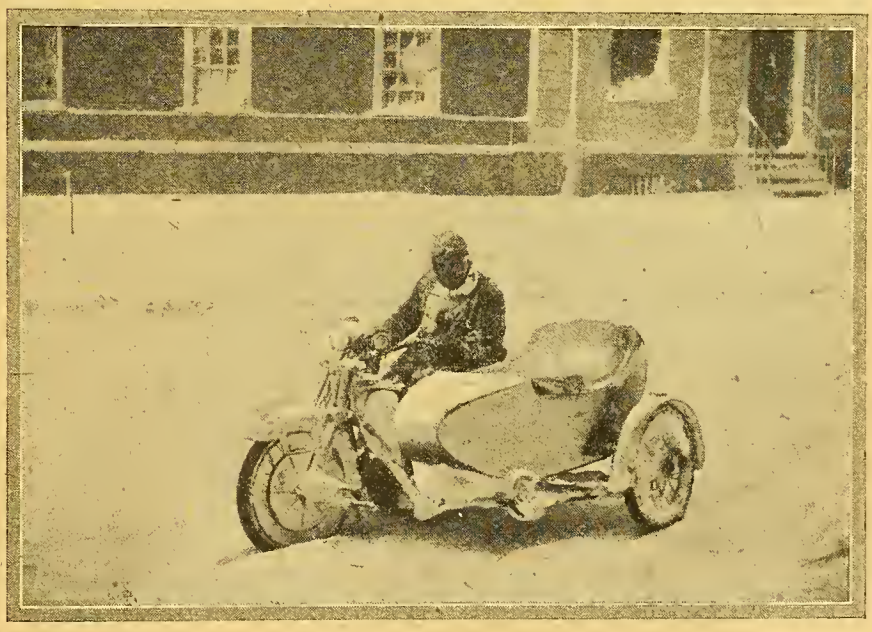
As I am rebuilding a motor cycle frame to carry a 10 h.p. V twin engine, I would like to know: (1.) What is the wheelbase of the frame to carry a two-seater sidecar. (2.) What is the weight of a motor cycle for heavy sidecar work? (3.) What weight would you advise me to build the frame, to suit the above engine?—J. M.

(1.) There is no fixed length of wheelbase; machines vary between about 54in. and 58in. (2.) Weight entirely depends upon the specification, type of engine, and gear box, etc; we cannot give any definite figures. (3.) Weight does not necessarily have anything to do with the strength of the frame. By careful designing, it is quite likely that a frame weighing 80 lb., for instance, can be made infinitely stronger than one weighing 100 lb. Weight depends entirely upon good design and excellence of material.

### SPEED WANTED AT ANY COST.

I should be obliged if you could give me information on the following matters. I am undertaking, as a hobby, the obtaining of the maximum road speed possible from a 4 h.p. Triumph. I have every facility for the work where workshops, time, etc., are concerned. The following are the alterations I purpose making: (1.) Increasing the compression ratio. (2.) Substituting a slipper piston, and, of course, rebalancing. (3.) Substituting a new cam giving timing: Inlet valve opening $\frac{1}{32}$in. before top dead centre; exhaust valve closing $\frac{1}{8}$in. after top dead centre. (4.) Lightening the valves, tappets, etc. Kindly let me know the probable maximum speed attainable.—J.W.

The standard Triumph machine is not primarily designed for extremely high road speeds, and in all probability it will not lend itself to the attainment of a higher speed than about 60-65 m.p.h. (1.) The simplest way of increasing compression would be the fitting of a domed top piston, but it is doubtful whether you could make an appreciable increase without spoiling the running of the engine. This depends entirely on experiment. (2.) It is not certain that the fitting of a slipper piston would effect any considerable improvement. (3.) Variations in timing must necessarily be of an experimental nature, and we cannot tell you whether the suggested alteration will be advantageous or otherwise. (4.) It should not be necessary to lighten the valves or tappet. Provided you raised the compression, a little improvement might be effected by reducing the diameter of the flywheels slightly, so lightening them and minimising oil drag.



An enthusiast who attempted to take his 5-6 h.p. Raleigh sidecar outfit through the recently snow-covered roads in the Eastern Counties. The accumulation of snow beneath the sidecar shows clearly the result of charging a snow drift. The rider felt a pride in passing stranded cars on the way and being able to prove to their disconsolate occupants that it takes more than an ordinary blizzard to stop a really good motor cycle.

## READER'S REPLY.

### TYRE SIZES FOR 4¼ H.P. B.S.A.

Judging from the rim diameter which your correspondent "H.J." gives, it would appear his rim is the old style 26 × 2½, and if so, apparently he has had the correct size of tyre, but as he says the rim is not true this would probably account for the rim cutting which has been troubling him. This rim cutting would also be accentuated if the edge of the rim at the tyre seating is worn or rusty.—DAVID MOSELEY & SONS, LTD.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"P.B." (Horley).—Comparisons of 8 h.p. J.A.P. and 10 h.p. M.A.G. engines in G.P. Morgan.

"W.B." (Bradford).—4½ h.p. Quadrant: Consumption, cooling brakes, balance and torque of engine.

"B.W." (Yorks).—4 h.p. Dunelt outfit: Consumption, cooling, climbing, and starting.

"R.D." (Edinburgh).—Scott, 3¾ h.p. and 3½ h.p. models: Reliability, consumption, life of gears and chains.

"C.S.C." (Salisbury).—3½ h.p. Norton (16H), solo: Touring, replacements, shock absorbers, ground clearance.

"H.J." (Manchester).—Grado pulley on 1911 Triumph: Ratios, wear on belts with sidecar, ease of control.

"E.R." (Stockton-on-Tees). — W.S.R. variable jet on 4 h.p. Triumph.

"L.G.F.A." (Norbury).—4¼ h.p. Ariel sidecar: Consumption, climbing, engine noise.

"G.F.M." (Bedford). — 7-9 h.p. 1919 Indian, solo: Vibration, tyres, consumption; also 2¾ h.p. 1921 New Imperial: Climbing, general remarks and life of small end.

"R.H." (Shoeburyness).—Levis Popular: B.T.H. Sparklight: W.R.S. jet adapter.

"Anxious" (Banbury). — 2¾ h.p. 1921 Cedos, particularly with sidecar.

"J.F." (Liverpool).—Binks carburetter for 3½ h.p. Rudge: Power at slow speed and consumption.

"J.H." (Belfast).—Binks carburetter on 2¾ h.p. A.J.S. and New Imperial: most suitable jets (solo) and results obtained.

"A.H.L." (Ramsgate).—1921 10 h.p. M.A.G.-engined w.c. Morgan: accessibility of back wheel, stability on grease, general reliability.

"G.C." (Wishaw).—7 h.p. James (*de luxe* model outfit) and 4 h.p. Norton with family sidecar.

"G.R." (Wakefield).—Atmos or Binks on R.A.F. model P. and M.

"T.S.A." (Leicester).—2¾ h.p. A.J.S. standard sports model: Speed and consumption.

"J.D.M." (Edinburgh). — 6-7 h.p. Ariel, 1921 outfit.

"H.H." (Derby).—4½ h.p. New Hudson outfit; heavy loads in North Wales; also 6 h.p. Excelsior.

"A.B.C." (Bradford).—Atmos or other carburetter; W.S.R. jet adapter on Claudel; most suitable mechanical pump; all for A.B.C.

"S.A.A." (London, S.E.21).—W.S.R. jet adapter on 1921 3½ h.p. T.T. Rudge-Multi.

"F.W.M.D." (Jersey).—A.B.C.: general touring and everyday use; comparison with Scott Squirrel and Zenith-Bradshaw.

"Novice" (Daventry).—6 h.p. Hazlewood outfit.

"J.A.P.W." (Edinburgh).—Most suitable leather belt, and effect on pulleys on 7-9 h.p. Rudge Multwin.

"D.Mc.A." (Glasgow).—B. and B. carburetter on Villiers two-stroke: Jet size and consumption; W.S.R. jet adapter with above; 28in. × 3in. tyres on 26in. × 2¼in. rims; Watsonian featherweight sidecar with Villiers engine and three speeds

THE FIRST FOUR-CYLINDER TWO-STROKE.

Near Feltham. The Hon. Victor Bruce demonstrating the running of the Low four-cylinder two-stroke, described on page 228. On low gear there are 54 power impulses for each revolution of the driving wheel.

SPARKLETS

### In Liverpool.

The offices of the A.A. in Liverpool have been transferred to 35, Dale Street.

### The Razor King.

Those of our readers who use safety razors may be interested to learn that Mr. King C. Gillette is a director of the Ner-a-car Corporation of Syracuse, N.Y., and that he recently celebrated his sixty-seventh birthday by riding a Ner-a-car.

### Kirkstone Pass.

After the recent snowstorms, the first motor cycle to go over Kirkstone Pass was a 3½ h.p. Ariel with sidecar; the crossing was accomplished despite the fact that the snow was still six inches deep and the weather conditions only just made vision possible.

### A French Colonial Exhibition.

British manufacturers seeking new markets for export should bear in mind the great French Colonial Exhibition, which is to be held at Marseilles from April to November. Information regarding it may be obtained from the offices of the Paris, Lyons, and Marseilles Railway, 179, Piccadilly, London, W.1.

### Electric Wiring.

Of great use to those who frequently require different varieties of insulated cable is Ripault's Cable Chart. This gives the sizes of a number of high tension and armoured lighting cables, together with small specimen sections of the actual goods, which are manufactured by Ripault's, Ltd., 1, King's Road, St. Pancras, N.W.1.

### Catalogues Received.

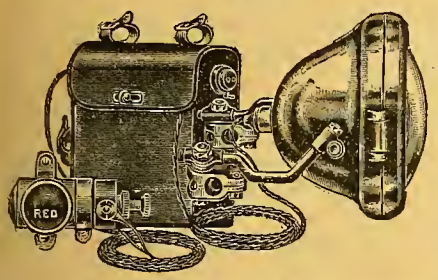
H. Jones, 778, High Road, Tottenham, London, N.17: Leaflet showing prices of four sizes of lean-to and span roof huts for motor cycles and sidecars; the figures are very moderate.

Veloce, Ltd., Victoria Road, Six Ways, Aston, Birmingham. A very well got up catalogue, with lucid illustrations of the Velocette machines. The various models are illustrated, described, and priced.

The "Coventry" Chain Co., Ltd., Spon End Works, Coventry. Particulars of "Coventry" chains fitted to motor cycles. A very useful list of motor bicycles giving the model, date, type of chain required, size of chain, and length in pitches of each chain fitted.

Prices' Co., Ltd., Belmont Works, Battersea, London, S.W.11: A series of booklets, one giving the prices of the firm's motor cycle lubricants, another entitled M.P.G., showing how best to get economy with an internal combustion engine, a third giving notes on the use of paraffin and petrol substitutes in engines designed to run on petrol, and, lastly, a list of motor cycles and the grades of Prices' oils recommended for each.

## SOLO SETS.

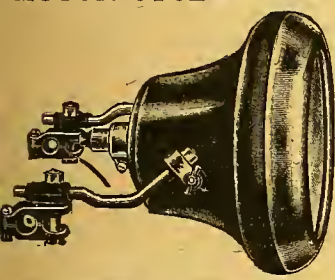


The most efficient Dry Battery Solo Sets produced. Head Lamp is provided with 6-volt bulb giving an exceptionally brilliant light, and ample light is provided in the rear lamp.

**Head and Rear Set.** 5½ in. front Head Lamp, M10/10 .. .. .. .. .. .. **£4 10 0**
Head Lamp Set only, M10/7 .. .. .. **£4 0 0**

**"Superba de Luxe" Head and Rear Set.**
7 in. front Head Lamp, M10/11.. .. .. **£5 7 6**
Head Lamp Set only, M10/8 .. .. .. **£4 17 6**

## MOTOR CYCLE HEAD LAMPS.



Excellent finish Exceptionally efficient.

Fitted with Adjustable Handle Bar Bracket Attachments and focussing Type Holder.

Complete with Lampholder and Adaptor.

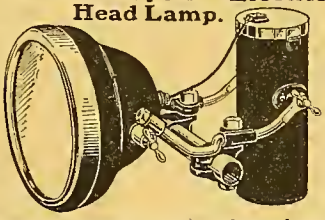
The "Challenge" 5 in front .. .. .. Price **24/-**
The "Superba" 5½ in. front .. .. .. Price **40/-**
The "Superba de Luxe," 7 in. front .. .. Price **50/-**

## "VOLEX"

**DRY BATTERY LIGHTING OUTFITS for Motor Cycle and Sidecar**

**British Made.**
**Recommended for Home and Export.**

### The "RAYONITE" Self-contained Motor Cycle Electric Head Lamp.



No accumulator, oil, or acid required; a brilliant light obtained at will. The convenience of this self-contained Set cannot be over-estimated, the pleasure of having a lamp always ready for use without preparation will be appreciated. Comprising Head Lamp (5½ in. front), combined with a strong metal container holding the "Ray-o'-nite" Dry Battery, complete with bulb. Ready for immediate use.

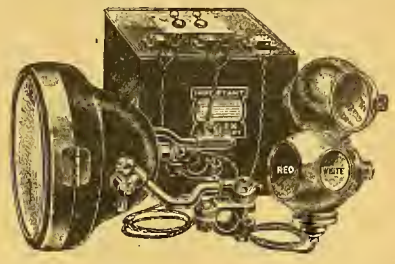
No. M9/1 .. .. .. .. .. **£3 10 0**
Spare "Ray-o'-nite" Dry Batteries, **10/6**
Can be fitted in a few seconds.

## ELECTRIC REAR LAMP.

Excellent finish complete with Lampholder and Adaptor.
Price **7/6.**

**Ward & Goldstone** PENDLETON MANCHESTER LTD

## COMBINATION SETS,



"Volex" Dry Battery Lighting Sets are the ideal no-trouble outfit. No other battery outfit will give results equal to the "Volex."
In satisfactory service for over 10 years with a constantly increasing demand due to their reliability, convenience, and economy in use.
**These sets give from 9 to 12 months' service, in ordinary intermittent use, without renewal batteries.**
**Specification.**—6-volt "Volex" Dry Batteries in metal container, Switchboard, Head Lamp (5½ in. front), Side and Tail Lamps, Cord and Bulbs.
No. Mc/490, as illustrated .. Price **£6 10 0**
Also supplied with "Superba de Luxe" Head Lamp (7 in. front).
No. Mc/450 .. ... ... Price **£8 0 0**
Ready for immediate use.

## POCKET TYPE METERS

Highly finished.
Accurate and Reliable.
0 to 6 volts **9/6.**
0 ,, 12 ,, **9/6.**
0 ,, 16 ,, **9/6.**
0 ,, 6 Amps. **9/6.**
0 ,, 30 ,, **10/6.**
Combined Volt and Ammeter **11/6.**
SECTIONAL LIST M/202 ON REQUEST.

# The Humber

## 4½ h.p. FLAT TWIN

*Cambridge.*

*Gentlemen,—In January 1920 I purchased a Humber Flat Twin Motor Cycle; its records to-day are: Mileage approximately 8,500 miles, engine trouble nil, petrol consumption phenomenal. Quite recently one gallon sufficed for 105 miles, a non-stop run which involved a considerable portion of Birmingham, all Coventry and Northampton. The machine has been tested under the severest conditions. I rode for eight hours on end over the Welsh mountains, and the roads in many cases were merely rough-hewn rock surface. It has to be a very powerful machine to pass my Humber on the road.—C. R. BENSTEAD.*

REMARKABLE alike for its great Silence and Reliability, this model has been described in motor cycling quarters as "Coventry's finest production."—The illustration shows the all-chain transmission (chain cover removed).

If you are out for sport, our new Sports model is a tempting proposition well worth your consideration.

4½-h.p. Flat Twin Solo Model - £110
4½-h.p Flat Twin Sports Model - £100
4½-h.p. Combination Outfit - - - £144

*Write for full particulars.*

### Extract from "MOTOR CYCLE" Nov. 17th, 1921.

"The big single two-stroke is another type of motor cycle which will interest the prospective purchaser of a medium powered machine. In this class the 'DUNELT' is the best known; in fact the only one made in any quantities, and one member of our staff, who has owned one for the past year, has found it eminently satisfactory. In its road performance it resembles a 5-6 h.p. twin, and, as it possesses the slow pulling qualities of all two-strokes, it may be regarded as a top gear machine, in that it is not necessary to change down so much in traffic, or corners, or on hills, for the 'DUNELT' pulls well on a hill almost to a crawl, when the majority of four-stroke singles would knock and konk out."

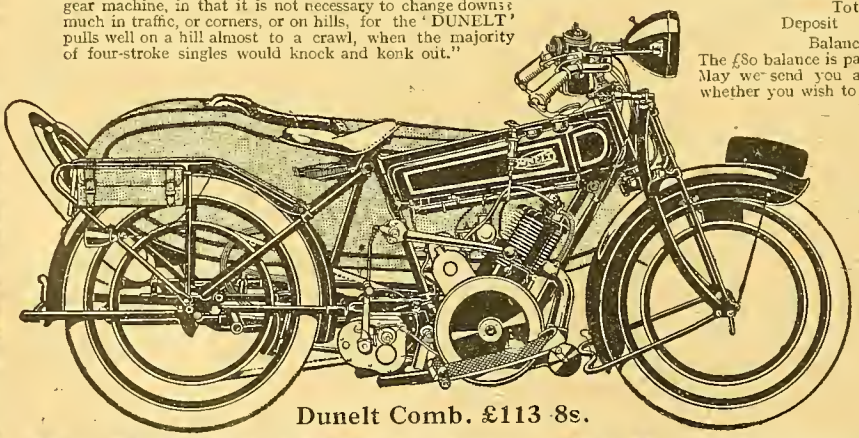
### THE IDEAL FAMILY OUTFIT.

The Dunelt is often referred to as the Ideal Family Outfit for the man of moderate means. It is capable of taking three adults practically anywhere, and for ease of control the Dunelt is unbeatable.

For those wishing to purchase out of income we add only 4 per cent. to the purchase price as follows:

| | |
|---|---|
| Dunelt 4 h.p. comb. with spare wheel and tyre | £113 5 0 |
| 4 per cent. interest | 4 10 6 |
| Total | 117 15 6 |
| Deposit | 37 15 6 |
| Balance | £80 0 0 |

The £80 balance is payable in 12 monthly instalments of £6 13s. 4d. May we send you a catalogue and order form. Please state whether you wish to pay cash or purchase on the E.P. System.



Dunelt Comb. £113 8s.

DUNELT TWO-STROKE

# An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

# Insurance Policies

## IMPORTANT AGENCY EXTENSION

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

WRITE TO-DAY FOR FULL PARTICULARS.

## Research Work and Motor Cycles.

THAT even the most modern design of motor cycle is capable of further improvement must be patent to all those who study engineering. Nevertheless, such considerable advances have been made during the last year or two that important improvements are not likely to be effected without careful research. In earlier days our mounts were so crude that "hit and miss" methods were sufficient to reveal lines along which development was essential if motor cycles were to be a commercial success.

It is only in recent years that motor cycle manufacturers in general decided to adopt scientific bench testing plants, yet this is perhaps the first and most obvious need for all engine manufacturers. It is true that the installation of such a plant entails much expenditure, but the outlay is eventually repaid by quicker and more definite results, in addition to which the human element, which plays such an important part when road tests have to be relied upon for results, is entirely eliminated. The suppression of mechanical noises and vibration is the problem which needs future attention, though there are other points which will spring to the mind of the critical reader. In *The Motor Cycle* of February 16th we were able to outline some of the possibilities of the Oscilloscope as an aid to research, and it is almost impossible to over-emphasise the importance of this invention, since not only can vibration be rendered visible, but its source can be located by this ingenious instrument. In the same way it is possible to trace a mechanical noise to its origin by locating its position with regard to the crank (or auxiliary) shaft and analysing the results. Again, the results are visible or audible, and therefore much more convincing to the average person than mathematical calculations. It is already possible to examine minutely operations which are normally much too rapid for the eye.

Such inventions are worthy of every encouragement, since they open up a channel for the rapid advancement of our mechanical mounts.

## Four Cylinders.

FOR reasons not immediately obvious, the four-cylinder motor cycle has not yet attained that degree of popularity that might have been expected. Twenty years ago a British four-cylinder bicycle made its appearance, but was doomed to the fate of most mechanical designs which appear before their time. More recently an up-to-date aluminium engine was exhibited at Olympia, but lack of working capital has hindered its development, with the result that British four-cylinder enthusiasts have been restricted to imported machines. At the present moment there is a recrudescence of feeling in favour of the four-cylinder engine, and more than one engine of this type is on the stocks in addition to the small four-cylinder two-stroke described in our last issue.

Probably the main causes of delay in development have been cost and a fear of multiplicity of small parts. The first-mentioned obstacle will undoubtedly make its presence felt in the early stages, but it is not insuperable, and the second has no excuse for its existence when we consider that if advantage be taken of the full 1,000 c.c. limit the cylinders will be quite appreciably larger than those of many existing twins. For a "square" engine the bore and stroke could be 68 m.m., or 60 m.m. bore × 88 m.m. stroke would be suitable dimensions for a long stroke type. The four-cylinder-in-line type offers scope for ample bearing surfaces and light moving parts, but this is not by any means the only solution to the problem; a four-cylinder of the double "flat twin" type will give the same impulses, and a four-cylinder Vee can be as good as regards balance, but slightly less even in torque.

An index to the advertisements in this issue will be found on the page facing the back cover.

### The Opulent, Middle-aged Rider.

WEEK-ENDING at country houses has made me realise what a number of people, resident at fair distances from stations, churches, post-offices, and the like, are looking to the motor cycle as a possible tender to their cars. I can recall at this moment a score of households, which maintain something like a 20 h.p. Austin as their main transport, and have since the war invested in some sort of a two-wheeler as a dinghy to the yacht. Madam wants to go to church, or to the station, or to post, when Papa is away with the car; there may be two or three dancing and tennis-playing daughters; there is a governess; occasionally the more youthful sort of son, say a Winchester boy on his holidays, requires short distance solo transport. Of course, young Clarence knows all there is to know about motor bikes, as his arguments with the governess at the breakfast table testify. Such households form curious backwaters of the motor cycle world. They muddle and struggle along quite on their own, innocent of club matters, technical matters, and the like, regarding motor cycles much as you and I, dear reader, regard a gas meter—as inexplicable boxes of mechanism, which are necessary evils of life under certain conditions.

### Their Choice of Mount.

IN 1920 and 1921 such families generally bought a scooter. I have yet to encounter one solitary case in which they loved it. It was not very strong on hills. It was quite easily upset. Frequent tumbles seem to have been the rule with it, especially on the part of the fair sex; and its history in their hands makes me rejoice that, before its failings were exposed, this journal gave it a very guarded and critical welcome. Just at present the Ner-a-car is what such families seem to fancy, though the small two-stroke is by no means unknown amongst them.

### What They Are Looking For.

I HAVE cross-examined some of these "motor cyclists *malgré lui*," as Molière might have called them; and I find that their special yearnings may be summed up as follows:

(1.) Weight as low as possible.
(2.) Foolproof starting.
(3.) Absolute reliability.
(4.) Cleanliness (no special clothing to be needed).
(5.) Unpuncturable tyres.

This specification is still guaranteed to puzzle any designer. I do not see why the three centre items should not be provided, but the first and the last are real problems. For example, the surest way of solving (5) would be to give them 3in. tyres containing such a tube as Jeff or the Challenger. Then up goes the weight. The slim little governess can no longer wheel the machine without its pulling her over on top of it, and so one has to add a third wheel or some type of trailing steadies.

### The Worst Crux.

THERE are designers who could lay out just the sort of machine which this special market requires. That they should do so is much to be desired. It would fill a need. It would reduce unemployment. It would strengthen our ranks. It would occupy idle plant and capital. But the man who could market such a machine hesitates, because he knows that the ordinary motor cyclist does not want this kind of machine, and that it will be a very long and absurdly costly business to execute the necessary propaganda, and convince the sort of household which I have indicated that his machine fills their needs. The Ner-a-car people have made the bold experiment, and it will be watched with keen interest by the more conventional type of motor cyclist.

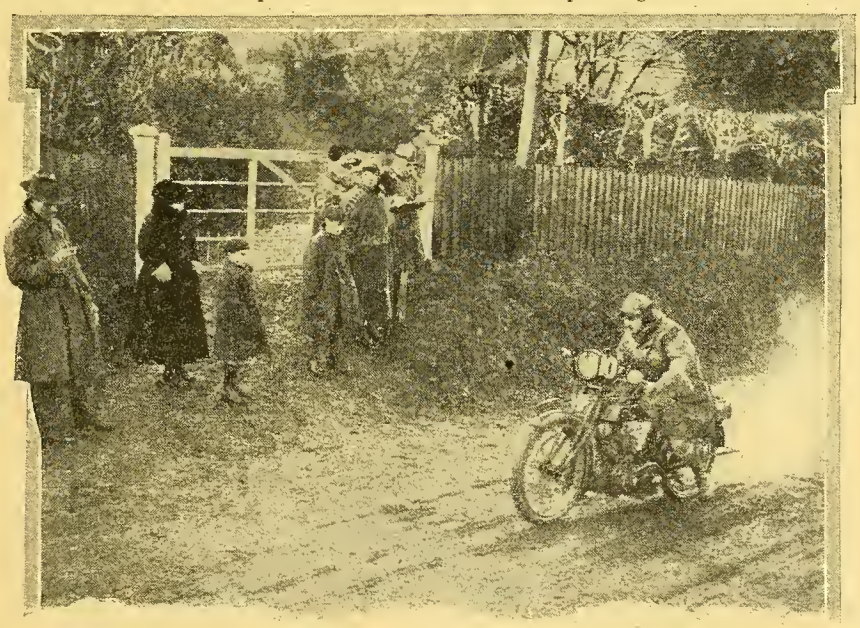
**Occasional Comments.—**

## A Tame Sports 'Bus.

NOBODY need be afraid of the modern sports 'bus, which is tractable and docile as a pet lamb. My new four-valve Triumph starts from stone cold on an Arctic morning at the first kick, and potters in and out of its small shed with the engine firing under easy and careless control, though quite ready to roar like a bull, and leap like a young unicorn, if one wishes to impress any stunt-merchant with its paces. It inspires a wondering curiosity at the restricted popularity of decompressors, which even now are quite scarce luxuries, immensely as they facilitate engine management. It seems a pity to lumber up such a machine with accessories, though serious roadwork naturally demands a hooter, a lamp set, a speedometer, a spare tube, and rough weather clothing in reserve. The pity is dual—such luggage spoils the clean lines of a beautifully designed mount, and anything carried out of centre on the handle-bar detracts a trifle from the perfection of the steering. Of course, a mechanical horn built to fit on the top tube is better than a bulbhooter carried lopsidedly on the steering bar; but the speedometer must be out of centre unless indeed one fits it, American fashion, to sit on the top tube and drive off the back wheel; and the latter already stacks quite enough lumber.

## Straws Show—

WHICH way the wind blows. Have you noticed how many firms have begun to boost the non-sporting, old man, utility type of machine? There is the Ner-a-car with the much-enduring Mrs. Janson riding from London to Glasgow in a month when wise men prefer the smoke-room fire, and going clean through the night as well as the day. There is the Harper Runabout, whose cunning sponsors have lifted a passage from B. H. Davies' open letter to the trade, and used it to indicate that the real "everybody's machine" is already with us, not to speak of organising races in skating-rinks. Then the M.C.C. is prattling of a Land's End—John-o'-Groat's ride, and the American trade are confessing that these lengthy potters have a better advertising value than the T.T. or the chamois-training schools of the A.C.U. The motor cycle seems to be approaching its utility epoch, just as the pedal cycle did before it. However, so long as we have the Coventry Club to send its men up bramble-roofed ditches in midwinter, the sporting side is not dead.



S. M. Greening demonstrating the acceleration of a 500 c.c. J.A.P. twin-engined Sunbeam in the Essex winter trial.

## The Best and Lloyd Pump.

MY recent comments on mechanical pumps provoked a regular bombardment of testimonies from satisfied owners of the Best mechanical pump. I need hardly say that my statement only meant that I had never had a heart-to-heart talk with an experienced user of this gadget, for everybody is by now familiar with its appearance and design. Its devotees are unanimous in saying that it solves all oiling worries, economises oil, slows down carbonisation, and is altogether a vast improvement on the "watch the milestones" system. Many of these enthusiasts specify that they deliberately use summer oils of the thickest grade right through the winter.

## Corrosine and Derusta.

WHAT quaint names, by the way, these chemical coves give to their inventions. These two dopes are marketed by Thos. Howse, Ltd., of Smethwick, and deserve to be much better known. If you use "Corrosine," you'll never need "Derusta." "Corrosine" is—apparently—a particularly white and transparent celluloid varnish of a very tough texture; at any rate, I splashed some on to my goggles, and had to study the directions on the tin before I could shift it. Apply it to your plating, leave the 'bus out all night in a sleetstorm, and she'll be quite fit for an Olympia stand next morning. (N.B.—Some of these celluloid varnishes are yellow and brittle, which is why I can praise "Corrosine" so unreservedly.) If you don't know and haven't used "Corrosine," you'll probably want "Derusta." It will shift ordinary juvenile rust like magic, but needs a prolonged offensive of the Somme character if you pit it against a chain which has been lying in the garden for two years. For such extreme cases as the latter, I should advise readers to chum up with an employee in the new L.G.O.C. repair garage at Chiswick. Do you know how they cleanse the underworks of motor buses? Convert caustic soda into steam, causing it to impinge on the rusty part at 500 m.p.h. from innumerable jets.

# Contrasts on the Riviera—

A fine vista on the road between Mentone and Sospel.

## A Note on the Maritime Alps.

By C. B. WATERLOW.

BRIGHT, fleecy clouds were dotted about on the mountains, and the mid-winter sun, shining intensely, warmed my back to the marrow as I turned northward from Cannes the other day. Rising into the mountains through Grasse upwards to 2,000ft. and higher still, the air that had been warm and soft by the Mediterranean grew keen and cold, invading the lungs and the whole body. It made one want to sing, and my little-2¾-h.p. A.J.S. sang its own merry song, climbing steadily always on top gear, picking up even round the sharp bends above Grasse and bringing me much too soon to my luncheon halt at St. Vallier.

This world offers some strange contrasts: the champagne air of these sunny heights and the fetid atmosphere of the Monte Carlo gambling halls just below. No wonder those who spend their time at the gaming tables consume liquid champagne in considerable quantities. The mountain air of the maritime Alps is less expensive, especially when it is tasted from the saddle of a lively solo machine of British make and the soundest construction.

### Quiet Haunts.

Two roads cross the mountain range to the north of St. Vallier, the one being the main road to Castellane, Grenoble, and the north, and the other a local mountain route to the lovely, but little known, summer resort of Thorenc. From this latter road at a certain point one looks almost vertically down on to the main road a thousand feet below, for here the two routes converge in plan, but diverge in elevation. It is a fine piece of road engineering, like many another in the French Alps.

The whole perspective is grand and sombre. The road to Thorenc rises steeply nearly all the way from Grasse to the Col de la Sine (3,690ft.), a distance of about 25 kilometres, from which summit there is a superb view down the valley of the little river Loup. The Gorges du Loup is a classic excursion for tourists on the Riviera. The village of Thorenc itself is higher still, 4,070ft. according to the Michelin guide, and before the war there were winter sports there.

The southern barrier of the Maritime Alps is incredibly bleak and forbidding, a great rolling chaos of limestone crags and boulders, almost devoid of vegetation. Fierce winds sweep across these inhospitable heights, which offer the utmost contrast to the luxuriance of the *littoral*. I went up into the clouds at one point. It was the strangest experience; for, after the brightness of the lower slopes, the clouds at close quarters were by no means celestial, but dark and cold. It was like going up to the lid of the earth.

Penetrating further into the mountains, one passes beyond the zone of desolation into a region of splendid pine trees. The village of Thorenc, which boasts two historic chateaux, is surrounded by the loveliest pine woods. They told me there that the climate appears to have changed, the snow does not fall now in the profusion of former years, and they doubt if it can ever again become a resort for winter sports. The hotels were shut, and the place was silent in its winter sleep. Only when I proceeded to photograph the chateau did any sign of

Amongst the clouds on the Maritime Alps.

**Contrasts on the Riviera.—**

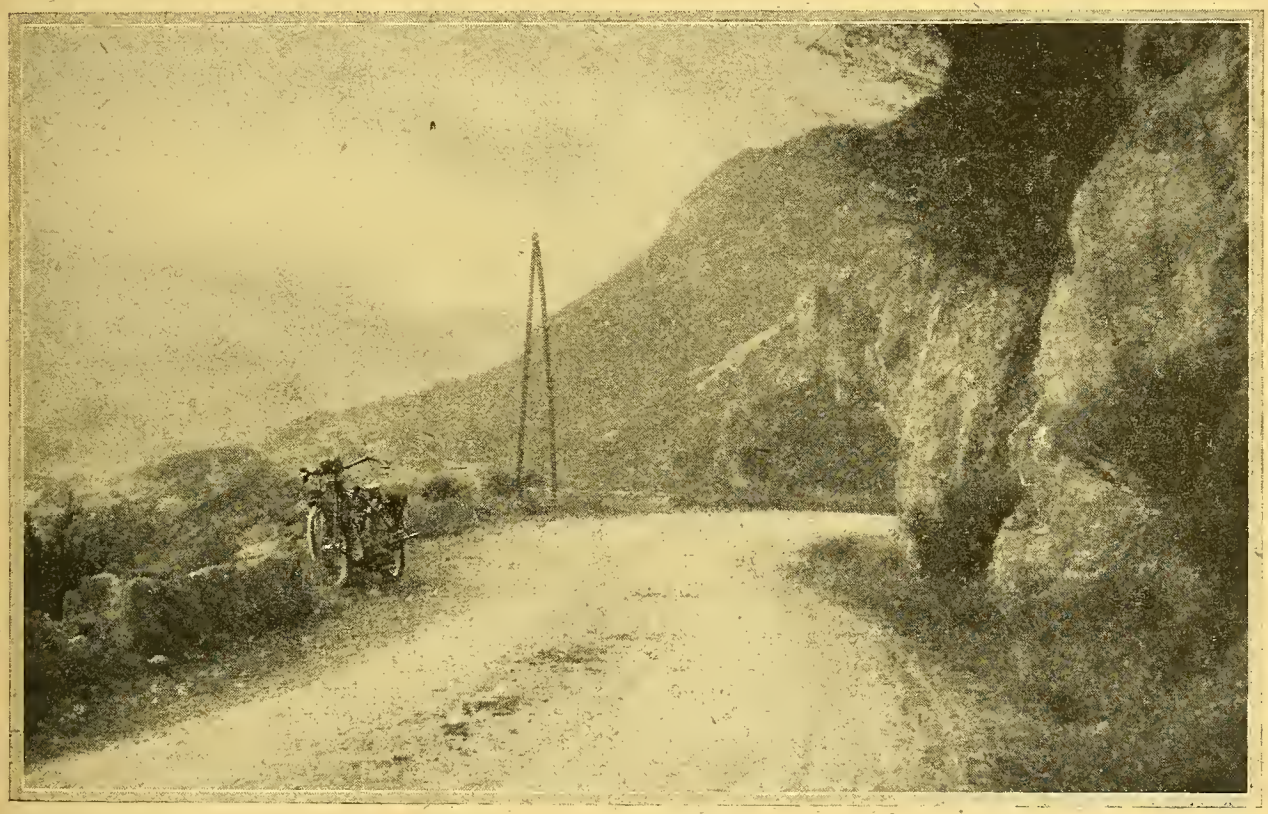
life appear; then an agitated caretaker ran out and informed me that I must not use my camera for the purpose of making picture postcards, but that if it was only a personal souvenir it did not matter.

### Scenes of Former Strife.

Mediæval fortresses and castles such as those at Thorenc can be found in many places in the Alpes Maritimes above the Riviera, and dry as dust are the accounts of their history in the hands of those who compile guide-books. There is peace now in the land, and it has reigned here for a hundred years; yet, as Sir Frederic Treves points out in his book on the Riviera, there were incessant sanguinary struggles in this country for seventeen hundred years, no mean period in the history of mankind. Ever since the days of Ancient Rome, potentates of Italy and of Gaul have fought each other for the mastery of this land.

But now there is peace. I stopped to take a photograph and gaze over the ravine of the Loup and the tumble of barren mountains to be passed on the way home. Even here in the South the mid-winter days are far too short, and the sun was slanting towards the horizon, lighting the clouds on their undersides. There was glittering hoar-frost on the road in the shadows of the pine trees, and everything was still with that absolute winter silence that lovers of the mountains know well: not even a trickle of water is to be heard, for the streams are frozen at their sources. A bird—a large hawk—flew by, and the swish of his wings sounded loud and clear, a notable disturbance. It seemed sacrilege to set chains, and valves, and flying wheels in motion; but it had to be done, for when the night comes it is not wise to be 3,000ft. up in the desolate Alpes Maritimes.

The roads inland at the back of the Riviera are not good, for the most part, though wonderfully engineered and easily graded. The coast route from Cannes to Nice, and on to Monte Carlo and Mentone, has been specially sandpapered for the procession of Rolls-Royces and the like which floats to and fro along it each winter. But those visitors to the Riviera who go no further than this gigantic marine parade miss all that is most beautiful. They do not get the contrasts or the real atmosphere of the country, and there is no better or more economical way of exploring here than with a sound, medium-weight solo motor cycle.



Magnificent scenery and unrivalled panoramas confront the rider as he nears the summit of the Col de la Sine.

## MAYOR OF HEREFORD OPPOSES A SPEED LIMIT.

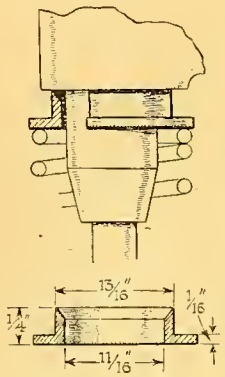
AT a recent meeting of the Hereford City Council there was a discussion as to the advisability of limiting speed in the city to ten miles an hour. The Mayor of Hereford wisely objected to the imposition of an artificial speed limit, saying that his experience in the police courts had shown him that it was best to deal with "road hogs" by prosecuting them for dangerous driving, his opinion being that any speed limit was an encouragement to drive at that speed irrespective of risk to others.—*The Autocar.*

# OBTAINING THE BEST RESULTS FROM AN 8 H.P. BLACKBURNE ENGINE.

## A Successful Competition Rider's Hints on Tuning for Touring Purposes.

DURING the comparatively short space of time, amounting to slightly over two years, since it was first available to the public, the 8 h.p. Blackburne engine has established a reputation for its ability to withstand an abnormal amount of hard wear.

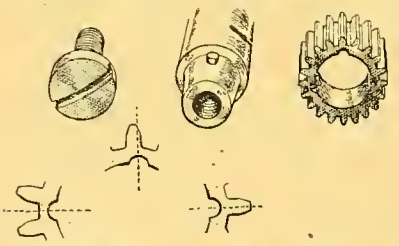
Designed more with a view to good pulling than high speed, this engine is essentially a "slogger," and when setting out to improve the running we are apt to overlook this desirable feature, and perhaps find that we have sacrificed it for the addition of two or three miles per hour to the maximum speed.



Valve spring collar arranged to insulate the spring from the heat of the cylinder.

The cylinder heads play an important part in the running of the engine; on many of the earlier engines, at all events, trouble made itself apparent in the form of warped valve seatings. This was due to the castings not having been previously heat-treated. The remedy is to have the seatings recut, after which the trouble is very unlikely to recur; in this respect a really old, well-seasoned pair of heads is of much greater value than new ones.

While on the subject of cylinder heads and barrels, it is necessary to emphasise the importance of maintaining a perfect joint between the two, since leakage of compression at this point is a latent source of trouble and lack of efficiency. The washer *must* be renewed every time the joint is disturbed, and a supply of these washers should always be kept in readiness. The heads must be bolted down evenly and dead tight, and it will usually be found possible to give the holding-down nuts an extra turn after the engine has been run for a time.

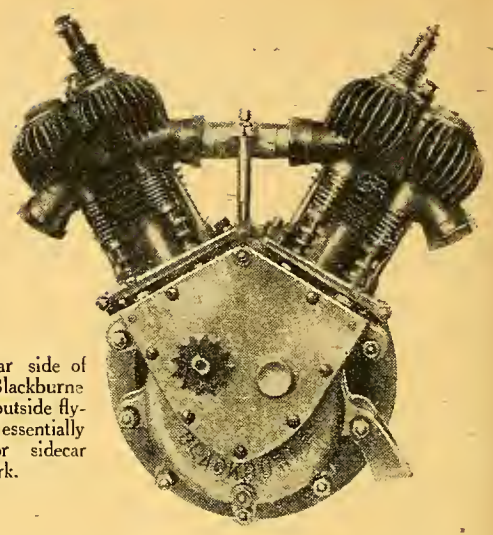


The well-known vernier system of locating the main shaft timing pinion is adopted on Blackburne engines.

The valve-timing should not be tampered with, as that recommended by the makers and detailed in the four items below will give the best results.

Inlet valve opens from top dead centre to 1 mm. down stroke.

Inlet valve closes from 5 to 7 mm. after bottom dead centre.



Timing gear side of the 8 h.p. Blackburne engine, an outside flywheel type essentially suitable for sidecar work.

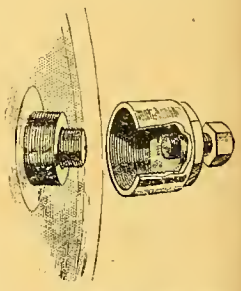
Exhaust valve opens from 14 to 16 mm. before bottom dead centre.

Exhaust valve closes from 1 to 3 mm. after top dead centre.

The correct setting of the tappets is of great importance. The clearances given in the makers' catalogue are as follows:—Inlet, ·003in. to ·005in.; exhaust, ·004in. to ·006in. The writer has found that a much greater exhaust tappet clearance is necessary on some engines, in many cases ·011in. or even more being required, but as a general rule ·004in. for the inlet and ·008in. for the exhaust will not be far wrong. A set of feeler gauges is a valuable asset and a necessity to ensure the best results.

There is a tendency on 8 h.p. Blackburne engines for exhaust valves to burn somewhat rapidly, and the only real safeguard against this is to fit stainless steel valves at the outset. This will save much grinding-in of valves and ultimate expense.

This same tendency to run hot in the region of the exhaust ports is responsible for exhaust springs losing their temper and the top coils closing up. This will cause a gradual falling off of power and ultimate misfiring, and can be entirely prevented by fitting protecting washers which insulate the springs from the hot cylinder. The writer has fitted these to his own machines of the shape shown in the accompanying diagram; these washers are a loose fit over the valve guides, so that they are only in definite contact with the hot cylinder through a knife-edge. They have entirely overcome the trouble, and necessitate no structural alteration to the engine which cannot be said of the washers supplied by the makers, which necessitate a reduction in the diameter of the valve guides.



Device for removing the flywheel now incorporated in all Blackburne engines.

The standard magneto timing calls for the contact breaker points being set to break 11 m.m. before top.

**Obtaining Best Results from a Blackburne Engine.—** dead centre at "full advance." This will be found suitable for all-round use, though a slightly earlier setting may be employed to advantage for speed; a later timing than that recommended will result in overheating and burnt exhaust valves. The magneto timing should be checked whenever persistent overheating occurs.

It is safe to affirm that no carburetter suits a Blackburne engine better than an Amac, the racing type in particular being excellent for touring as well as for speed work, though not so economical as the ordinary type. Excellent results may also be obtained with the Cox-Atmos by those preferring the single-lever type of instrument.

With regard to lubrication, probably any good brand of fairly thick oil will suit this engine, but the writer has always used Castrol "C." and can strongly advocate its use. No hard and fast rule can be given as to oiling, since the amount required varies very considerably according to circumstances; however, it will be found a golden rule to err on the liberal side, since decarbonising a Blackburne is simplicity itself.

Owing to the inherent quietness of these engines, "flywheel ring" makes itself rather evident. Possibly this could be entirely overcome by means of felt pads and so forth, but a much simpler method, which deadens the sound to a marked degree, is to enamel the flywheel all over. W. A. F. S.

# ONE MAKE OR MANY?

## Weighing up the Pros and Cons of Faithfulness to One Maker.

HOW many motor cyclists chose by chance the make they ride! Friend A., for example, really wanted a flat twin, but bought his present 350 c.c. single because a friend of his youth, now Benedict, was selling it cheaply in order to invest in a sidecar outfit. Benedict himself had fancied a new 6-7 h.p. Blink, but bought the 7-9 h.p. Yank he has because Messrs. Blank were selling them off at really advantageous prices. And so the tale goes on!

A proportion of the brotherhood, however, is more fastidious. Knowing what make and model they want, they wait until they obtain exactly what they require. This proportion, it seems, is subdivided into two classes.

A typical purchaser of the Class A type bought a single gear 3½ h.p. Blonk in 1912. It served him well, and because he is a conservative soul who trusts his luck rather than risking it, he has ordered, each November, next year's model of the same old make.

Class B contains riders of a far less tenacious breed. Motor cycle butterflies, they flutter from one make to another, never faithful to any for long. I can appreciate their motives, but shall never forsake the class I joined so many years ago.

### Reasons.

The 4¼ h.p. chain driver I ride is the direct descendant, albeit five-times-grandson, of the first machine I ever owned, and, true to type, has all the family characteristics I have grown to know so well. In various lairs in my workshop lie spares and gadgets innumerable, garnered from previous machines, whilst the roadster alongside carries almost as many.

### The Other Side.

And how I pity the butterfly! It is ten to one that for the first few weeks his very controls are strange, the riding position entirely changed, and the spares he had for his last machine no longer of any use. (Not knowing where next his fancy would settle, he hesitated to face the loss on selling them.) The still good 26 × 2¼in. cover from his last bus is no use on his this year's model, which has 2½in. rims and all-chain drive, rendering useless also his spare belt, belt lengths, and that wondrous assortment of fasteners.

Naturally enough, his system is not innocent of all good points, or it could not claim the adherents it does. One year he may ride over the most blissful spring frame ever made, another with the smoothest running engine, while for next season he is possibly promising himself the latest thing in sporting singles.

"Lucky man," I think, until I remember the covers—and the chains—and those belt fasteners.

Then I recall my old dog Tray—and it's the same old make for me! D.F.W.

# CLUB DEBATES.

TO provide interesting entertainment for members of motor cycle clubs is one of the most difficult matters which come within the purview of a club secretary. The Cumberland and County M.C.C., however, has discovered a scheme which has proved to be very satisfactory.

The idea is to get the members together for "an impromptu evening" and then to ask them each to write the title for a subject for debate. These suggestion slips are placed in a hat, from which one is drawn. The writer of the particular suggestion is allowed five minutes to deal with his question, and discussion and criticism follow by the rest of the company, which usually consists of a very satisfactory proportion of the most enthusiastic club members.

One of the agreeable surprises of this scheme has been that members who could never be prevailed upon previously to take part in debate found themselves in the happy, though possibly embarrassing, position of being actual leaders, and the good spirit which prevails appears to rob them of all self-consciousness.

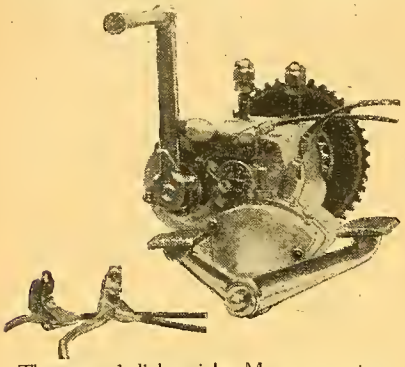
In addition, this club organises a series of lectures which have been voted an unqualified success, gaining in popularity as the session advanced.

# FOOT CONTROL FOR CHANGE-SPEED GEARS.

## The Moss Three-speed Operation with Positive Stop for Middle Gear.

FOR speed and competition riding where it is frequently impossible or dangerous to release the handle-bars, a foot-controlled speed gear is one of the greatest imaginable conveniences.

Where only two ratios are used pedal operation presents no difficulties, and the facility with which the gear may be dropped when the inevitable "tight corner" arises is delightful, assuming of course that the pedal is convenient to the rider's foot. When a three-speed gear is employed, however, difficulties arise.



Three-speed lightweight Moss gear box with foot control mechanism. The handle-bar trigger to release the middle gear stop is shown beside the clutch lever.

In many gear controls the location of the lever in its middle position is not so positive that it cannot be overrun, but in practice this is not a serious detriment, as the sensitiveness of the hand makes it always possible to feel when the middle gear pinions are in mesh by a more or less subconscious process which is carried out instantaneously. The same control, however, when an attempt is made to work it by foot, may become a positive nightmare, for the mind cannot extend its sensory nervous system to the extremities of an entirely insensitive boot heel.

During the 1921 T.T. races the Moss Gear Co., Ltd., of Aston, Birmingham, supplied both foot- and hand-controlled three-speed boxes, and users of the former claimed an advantage of several seconds per lap. In these boxes the middle gear location was not positive, but it has since been made so in a very simple manner.

### The Selecting Mechanism.

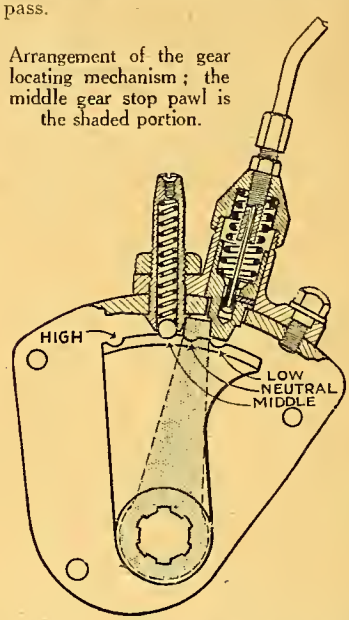
Location of the gears is effected by a spring-loaded ball dropping into grooves on a quadrant which moves with the control pedal. Mounted loosely on the same spindle is a pawl which moves parallel with and projects slightly beyond the periphery of the quadrant; this pawl works in a slot on the side of the quadrant extending from the low to the middle gear locating grooves. Projecting into the control case on the gear box is a spring-loaded steel plunger controlled from the handle-bar by a wire and finger trigger.

### Middle Gear Cannot be Passed.

When the quadrant is in the low gear position the pawl lies behind the plunger and a change to middle gear can be made by depressing the toe end of the pedal. The forward movement of the quadrant brings the end of the slot against the pawl, which in turn is held by the plunger, and thus middle gear cannot be overrun, but a change back to low can be made as desired. To get into top gear the pawl is released by raising the plunger with the handle-bar trigger, when the toe of the pedal will again move forward. The pawl is now at the forward side of the plunger, but a change back to middle can be made when the forward end of the quadrant slots limits the movement by meeting the stationary pawl, and so middle gear is positively obtained in the downward change also.

To return to low again, the plunger must again be raised to allow the pawl to pass.

Arrangement of the gear locating mechanism; the middle gear stop pawl is the shaded portion.

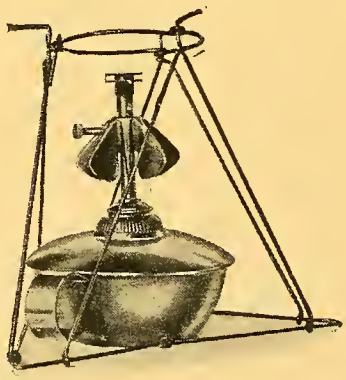


Although the operation sounds a little complicated it is really very simple if it is remembered that one can *always* change back to the last gear used, but that the trigger must be pressed to go to the other extreme ratio; an instantaneous change is always possible from top to middle and from middle to the last gear used.

# A CURIOUS APPLICATION OF AIR COOLING.

RECENTLY a representative of the Brillig Light Co., of 8, Wilmington Street, London, W.C.1, called upon us to demonstrate the Brillig lamp. This device is one which burns vaporised petrol with luminous flame, so providing light and heat either for household purposes or for camping and picnic-ing. Simplicity is the keynote of the lamp, petrol being drawn up to the burner head by a wick. The head is heated by the flame of a wax match, and the vapour then escapes from a ring of fine holes, and is ignited, when it serves to maintain the burner at a heat sufficient for the continued functioning of the apparatus. For boiling kettles, etc., a collapsible wire stand is available, and outdoors a mica cylinder is used to shield the flame.

Most interesting in the working of the lamp is the system of flame regulation. It will be seen that on the central wick column is an eight-vaned fitment capable of sliding vertically. The demonstrator showed that when this fitting was brought up to the head the flame was instantly lowered to a glimmer, rising immediately the regulator was dropped. The secret underlying this mysterious control is that the fitting absorbs the heat of the burner head and dissipates it so rapidly through its cooling flanges that the petrol is not vaporised so quickly.



For campers, picnic-ing and other applications where heat and light are needed: the Brillig petrol vapour lamp.

The lamp is nicely made, ornamental for indoor uses (of which there are a multitude), and as it burns petrol (most economically, too) it should be an invaluable gadget for the motor cyclist who indulges in summer picnic jaunts or holiday camping. The price with regulator is 12s. 6d.; the kettle stand, windshield, and a heating radiator are listed as extras.

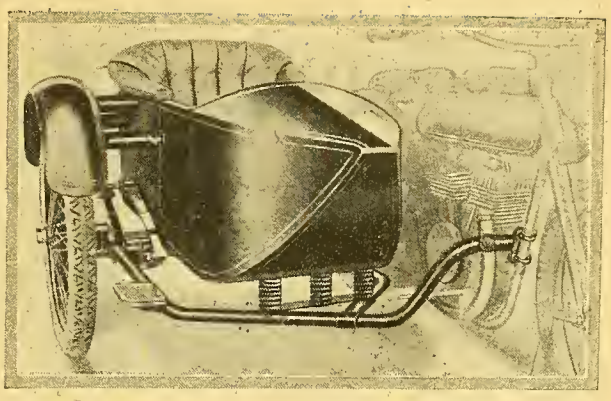
Incidentally, the inspiration for the name of the lamp was gained from Lewis Carroll's poem, which commences: "'Twas brillig. . . ."

# SIDECARS TO SUIT OVERSEAS ROADS.

## The Goulding Sidecar—an Australian Design with Semi-flexible Connections.

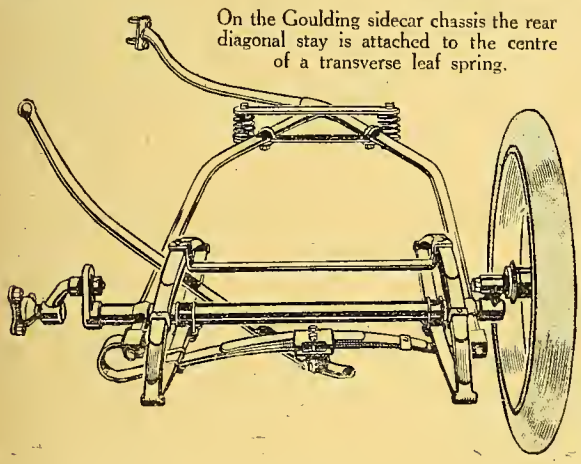
DESIGNED by an Australian, the Goulding sidecar has had considerable success in the land of its birth, and is now being made under licence in the United States by Messrs. Shillan, Beck and Co., Inc., at their Milwaukee factory.

Essential features of the sidecar are the chassis construction and connections. Taper bolts are used for fastening it to the motor cycle frame,



Exceptional ground clearance, massive construction, and very substantial mudguard fixings are features of this sidecar.

On the Goulding sidecar chassis the rear diagonal stay is attached to the centre of a transverse leaf spring.



thus ensuring security of attachment. An adjustment for the wheel is provided, which is fixed by a patent Drake lock so that the sidecar may be adapted to various machines with different sizes of wheels; there is a similar adjustment at the chain stays. The long diagonal tube passing from the saddle tube to the rear of the chassis is connected directly to a transverse spring, thus ensuring a flexible connection, and also steadying the machine against side sway.

### Roller Bearing Hub.

So as to conform to American and overseas conditions, the ground clearance is 11in. and the sidecar wheel revolves on Timken adjustable roller bearings.

The mudguard is attached to the body by means of tubular supports. These sidecars are fitted with extension axles so that the track of the vehicle may be adjusted to suit the ruts made by a motor car when travelling over bad roads.

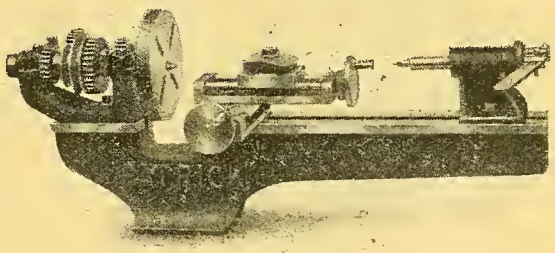
# MINIATURE LATHES FOR THE HOME WORKSHOP.

IN the pre-1914 period many motorcyclists who took up the mechanically-propelled machine because they were enthusiastic amateur mechanics, included a small lathe in their workshop equipment.

Nowadays the erstwhile five-guinea lathe has soared beyond the reach of most of those to whom it is a luxurious adjunct rather than a necessity to the following of their hobby. To meet the requirements of this class, however, as well as to satisfy the needs of model makers and amateur turners generally, a very fine range of 2in. centre lathes at remarkably low prices is being offered by F. Patrick, Ltd., Penraevon Place, Meanwood Road, Leeds.

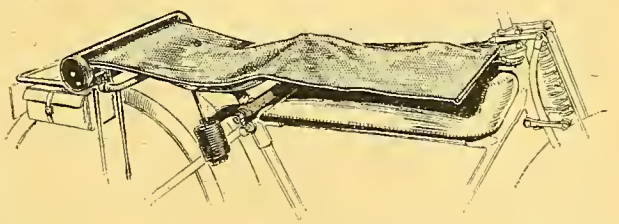
These lathes are capable of everything except screw-cutting, being fitted with a compound-slide rest (adaptable as a vertical milling slide) and a lever operated poppet spindle for sensitive drilling. The bed is solidly constructed and has a gap for the face-plate; the hollow mandrel is ground and runs in adjustable bearings, while both centres are taper. At £2 15s. this tool is of remarkable value, while at £4 5s. it can be supplied with a back gear. Mounted on a wooden stand, with treadle gear and belt complete, the prices are £5 and £6 10s. respectively.

Patrick 2in. centre back-geared lathe; it has a compound slide rest and admits 11in. between centres. The price as shown is £4 5s., and it can be used for drilling the slide rest and is easily arranged as a vertical milling slide.



# A COMBINED SADDLE AND TANK COVER.

RIDERS who have to leave their machines at the curb when making calls will be interested in the device patented by Mr. G. J. Coverley, of Rothesay, Church Road, Burgess Hill, Sussex. Occupying but little room on the carrier, it takes the form of a "blind" enclosed in a metal case, which it is intended shall have fittings rendering it suitable for any width of carrier. On the outer end of the blind there is a spring for attaching to the steering column when the cover is in use. In this position the saddle and tank are protected from the elements, while to uncover the machine is the work of a second, a spring rewinding the cover on its roller.



A useful fitment of interest to riders who use their motor cycles in all weathers.

# FRENCH NON-STOP TRIAL.

## 152 Miles at 24 m.p.h. average speed. Motor-Assisted Bicycles Compete with Big Machines.

THIS year's French motor cycle and cycle car non-stop trials, held in the Forest of Marly, on the western suburbs of Paris, were very much less difficult than those of a year ago, by reason of the decision of the committee to abolish the two test hills. One of these hills was really impracticable, for after heavy rain it was impossible for any wheeled vehicle to get a grip. The second hill consisted of a short, greasy descent through the wood, followed by a winding climb over a well-surfaced road. With these two hills eliminated, the five-mile course was practically level, and although the surface was not good anywhere, and in several parts was decidedly bad, there was nothing of an extraordinarily strenuous nature.

At the start of the French non-stop trial held in the Western suburbs of Paris.

Taking a bend in a greasy forest lane. Naas on a French A.B.C. passing a competitor on a motor-assisted bicycle.

The distance to be covered varied with the class of machine, and the average speed also varied, the highest being 24 miles an hour for the 500 c.c. mounts and those of higher piston displacement. These machines had to cover 152 miles, the time being taken on each lap, or every five miles.

### Eight Clean Scores.

Clean scores were obtained by Pierre (D.F.R.), Maillet (A.B.C.), and Naas (A.B.C.), Pinney (Triumph), Lambert (Harley-Davidson), Minot (Triumph sc.), Walbron (Harley-Davidson sc.), and Raymond (Harley-Davidson sc.). Sixteen others were either penalised or had to retire without completing the course.

A special class was provided for motor-assisted bicycles, which had to average 9 m.p.h. for a distance of 65 miles. Out of twenty-five starters, the seven successful machines in this class were an Evans, a Sicam, two Voisin Motor-Fly, and three Cyclotracteurs. In addition to the motor cycles, twenty-two cycle cars started in the competition, and nine of these finished with clean scores.

# LONDONERS AND A NORTHERN RALLY.

MR. ALAN W. DAY, the honorary secretary of the North London M.C.C., one of the most enterprising Southern clubs, sends us the following letter for publication :

"With reference to the annual rally on Good Friday at Richmond (Yorks), this club and several other similar organisations in the South are awaiting with interest the publication of the full regulations governing this year's event. In 1921 a band of enthusiasts from the North London M.C.C. made the long journey to the Northern market town, leaving the Metropolis on Thursday evening after the usual day's toil, snatching refreshments and a few hours' sleep at Bawtry, and arriving at Richmond with none too much time to spare before the count at 12.45 p.m.

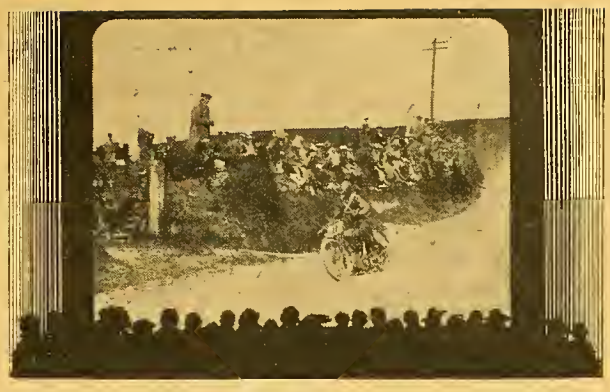
"Your interested readers will recollect that an attempt was made (and duly frustrated) to disqualify the Londoners on the grounds that they had not travelled the whole distance on the day of the rally—a feat well-nigh impracticable—although there was no clause in the rules to that effect. If the energetic organisers intend to include such an irksome restriction (from the point of view of Southern clubs) in this year's regulations, it is suggested that its seeming harshness be somewhat tempered by fixing the hour for the count considerably later in the afternoon, say, 3 p.m. This compromise would, at least, give the *enthusiastic* clubs a sporting chance, even though they dare not put foot to kick-start until the last stroke of the hour of midnight on the previous day.

"It is confidently assumed that our Yorkshire friends would welcome parties from Southern clubs, and in view of the foregoing facts and suggestions, it is repeated that the publication of the rules governing the 1922 Richmond Meet are awaited with interest.

"It is worthy of mention here that, in connection with the Second London Rally organised by this club, which takes place on Whit Monday (probable venue, Hendon Aerodrome) two Yorkshire clubs have already signified their intention of attending and that, in addition to the count taking place as late as possible in the afternoon, it will not be necessary for them, or any other distant club, to ride all night and thus arrive at the rally possibly too fagged to be able to participate in and enjoy 'the fun of the fair.'"

# CLUB ENTERPRISE.

## The Adventures of the Cork and District M.C.C. Special Messenger who journeyed to London to obtain "The Motor Cycle" Film.



THE enterprise of an Irish club in order to secure delivery of *The Motor Cycle* film is the subject of the following article. Owing to the railway strike in Southern Ireland, it seemed probable that the film, which had been "booked" for the benefit of its members, would not reach the Cork and District M.C.C. in time, and it was deemed necessary to send a special messenger to London to collect it. According to the planned schedule, the Cork motor cyclist would have a clear six hours in London, and arrive back in Cork at 9 a.m. on the morning of the day the film was to be shown in that city. But "the best laid schemes . . . ."

The Cork M.C.C. courier had scarcely settled down in his bunk when the engines of the ss. "Puma" stopped. From the porthole he could see that flares were lighting up the darkness. He dressed and repaired to the deck.

### A Rescue at Sea.

A dismantled coasting schooner, with her crew of seven lashed to her decks, and seas breaking right over, was rolling in the troubled sea. Capt. Swan, of the "Puma," putting his charge about, manœuvred with that skill gained only by long experience, to within hailing distance.

"Can you sling us a tow-rope?" came the distant wind-swept request from the schooner.

"Yes, if humanly possible," must have been the steamer captain's thought, and he did. Slowly, more slowly now, down he bore on this poor hulk, for now she was nothing more; yard by yard it seemed the "Puma" approached, now broadside, now stern on, to within what seemed feet of her goal, and how it blew and tossed and stormed the while! The third effort brought the line to the schooner's rail, and in a twinkling a heavy hawser followed and was made fast at either end.

Back to Queenstown the "Puma" dragged her half-submerged prize, and there safe in harbour she was handed over to the powers that be, saved, beyond doubt, solely by the magnificent seamanship displayed by Capt. Swan, whose masterly handling of his craft was described by two naval officers aboard as the finest piece of work they had ever witnessed.

With six hours' delay and a bad night it appeared that the Cork M.C.C. courier would miss his connection.

Fishguard was reached hopelessly late, and a wire in perhaps a none too hopeful strain sent to headquarters at Cork, and to London to have the film meet the courier at Paddington.

Half a carriage and a pipe helped to ease the monotony of a six-hour rail journey, and without a time-table, the traveller found a welcome relief from modern fiction in working out schedule with the aid of the "little liver pills" milestones and a watch. At Swindon he came to the conclusion that even a G.W.R. express engine can hardly average eighty m.p.h., so the lot fell on the Fishguard-Rosslare route for the return journey.

5.40 Paddington. Minutes which appeared to be hours were spent in looking for the film man and hunting through cloak rooms and parcels offices for the familiar tin box of films, but nowhere could it be found. Business houses close at six more often than not. The messenger from Cork got a taxi.

### Found at Last!

Checkmate! *The Motor Cycle* office was closed! Corner buildings must have back doors. "Good egg, if you turn that key I'll——" "Oh, yes, I am the Cork and District man. Thanks if you will. I'll sign for it. Right! Good-night."

Just at 7.50 p.m. the same slogging old taxi wandered into Paddington and dumped a box of films, a suit case, and an Irishman. Eight p.m. saw the Irish mail gliding from Praed Street like the hon. secretary's Scott. Dinner served en route to Fishguard was most welcome, being the first sit-down meal for 27 hours, and, as it turned out, for the whole trip.

Fishguard was reached in good time, followed by a splendid crossing to Rosslare on the "St. David," of happy memories when visiting the 1919 Show at Olympia.

### 130 Miles to Go.

A mere hundred and thirty odd miles to do now without a motor-bike, and with a doubtful rail service. The strike, however, had not spread, so if his luck were in the messenger would reach Fermoy at 10 a.m., with twenty-two miles to go. A wire to a fellow committee man would surely bring him to meet the train, and all would be well.

A heated political argument between two (happily) pacifist opponents helped (?) again to relieve the train's monotony, and Fermoy was welcome after a four-hour sitting.

Flooded roads, trenches, broken bridges, a good car, and a wet magneto summarise the last stage of the journey to Cork, which was completed in a downpour at 1.30.

A hurried meal, wash and brush up, and at 2.30 the club's special messenger wandered into the hall as if coming to see *The Motor Cycle* film were something he did every morning before breakfast. At the conclusion of the performance, when asked his opinion of the whole affair, he said: "Worth it? Well, if I knew before starting that the film was so good and all the railways and steamship lines were on strike, I'd have walked and swum."

C. M. R.

# THE QUESTION OF INSURANCE.

WITH the approach of Spring many motor cyclists are preparing their mounts for the road. On machines with a long mileage record to their credit there are many obvious necessities which result in reliability in running. There is, however, a point which so many motor cyclists fail to consider, and that is the question of insurance.

In many of those cases where machines have been damaged through the negligence of other road users it is found that the owners have neglected to insure. Very often a motor cyclist leaves his machine beside the kerb; a motor car drives up or passes too close to it, knocks it over, and some considerable damage is done. Incidentally, the car also suffers injury; probably its wings may be badly dented. The motor cyclist, not being insured, tries to make the best of things, but is horrified that, in addition to his own repair bill he receives a bill for repairing and repainting the wing from the owner of the car.

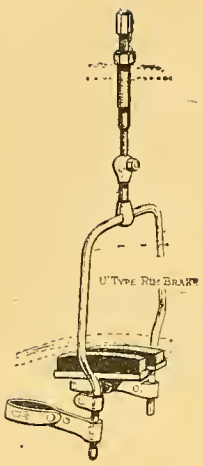
Now, if the owner of the car is insured while the motor cyclist is not, the latter may be put to endless law expenses in fighting the insurance company and proving the car owner was really to blame, and with very small hope of success.

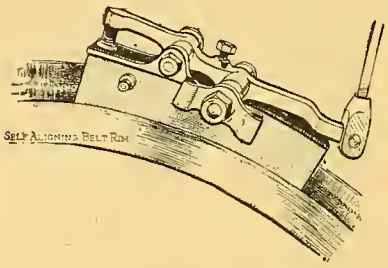
Quite recently a motor cyclist was run into by a Ford car. He sought a solicitor's advice and proceeded against the owner, only to find that he was a bankrupt.

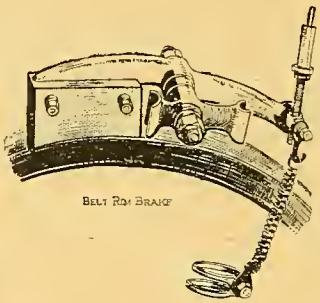
It is just as necessary to insure one's motor bicycle against damage and oneself against third party risks as it is to insure one's house and property against fire, and for their own protection readers who are not already insured are advised to see that they are covered against all risks, and by a sound policy, before they start their 1922 riding.

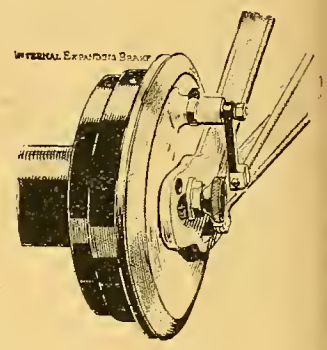
# BRAKING SYSTEMS OF TO-DAY.

## Variations in Design that Cause Differences in Efficiency. Neglecting a Serious Problem.









REPRESENTATIVE TYPES OF FRONT WHEEL BRAKES.

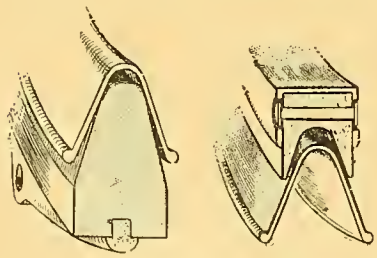
IN the motor cycle's march of progress brake design always lags just a little behind. This is unfortunate, for the advantages of increased power and efficiency are greatly nullified if the means of holding in check the resultant extra vim and velocity are not proportionately effective.

Too often, even in these enlightened days, a machine's braking arrangements forcibly strike one as being a designer's after-thought—perhaps merely to comply with a law that is wiser than we are inclined to believe. My only post-war smash, in the course of well over 20,000 miles on many different and often strange mounts, was caused by a thoroughly badly designed rear brake, and that on a 1921 sporting lightweight that was otherwise a very delightful solo mount. I defy any absolute novice to have driven that machine twenty miles without going over the handle-bars.

Granted, of course, that this case was an exception to the general rule, and that the model in question now proudly carries two extremely neat and efficient internal expanding brakes, I, nevertheless, still note 1922 products that, for reasons not unconnected with braking, I have no pressing desire to try on the road.

### Harsh Brakes Not Necessarily Efficient.

What many brakes lack is a wide enough range of action. They are either "full on," "three-quarter on," or "off"; some omit the intermediate position. In both cases emergency application retards the machine in an admirably prompt fashion, so promptly that the rider is in danger of going on, alone, with certainly unpleasant and possibly dangerous consequences. Further, if effective pressure on the pedal immediately locks the wheel, the brake, as a brake, ceases to do any useful work. It might just as well be replaced with a sprag between the spokes.



Apart from the wedging friction provided by the internal shoe (left), this type also has a considerably greater contact area than the external pad (right).

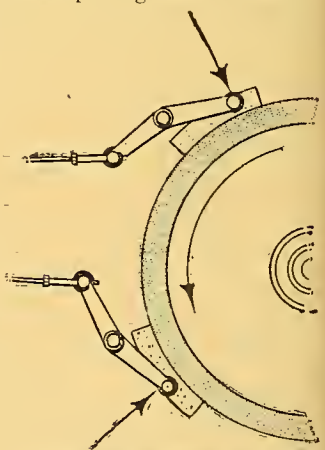
Theory and practice agree that the secret of a prompt pull up lies in retarding the wheel (or wheels) as much as possible without causing it to cease to revolve. The most skilful rider cannot ensure this on many machines.

### Belt Rim Type the Worst Offenders.

Belt rim brakes—"dummy" or otherwise—are usually the worst offenders in this respect. Yet two of the finest brakes of any at present fitted are of the same type. Shoes that are much too small are common; obviously the greater the friction area the less pressure is needed to give the same retarding effect. On the same reasoning, blocks working inside the V of the drum, apart from their wedging action, have a greater contact area than those that press on the narrow back part. Personally, I cannot understand why the latter design survives at all, for it has the added disadvantage of impeding rear wheel removal. There are several other points, little in themselves, that go to make or mar this type of brake.

### Even Application and Self Alignment.

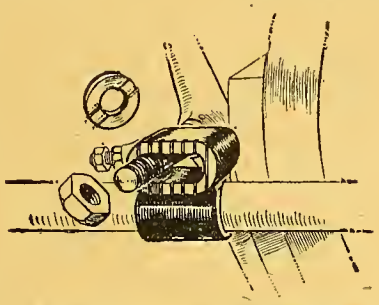
The pad should be balanced or, as it is usually called, "compensated" so that it engages equally along its whole length; if one end wedges in first, wear is bound to be uneven. It should also be self-aligning, so that it adapts itself to the eccentricity which is in time the inevitable lot of the average belt rim. Its pivot should be so



Diagrammatically illustrating good and bad practice in belt-rim brake design. The upper method causes "chatter," and may even result in a serious jam; the lower type gives a smooth trailing action with no loss of efficiency.

placed that it has a *trailing* motion with the wheel; one very famous machine suffers from much brake chatter through disregard of this rule; for, naturally, if the pivot arm be at a tangent *against* the direction of rotation, there is always a wedging tendency, quite absent when the lever (prolonged towards the shoe) follows the motion of the wheel. This is made clear in one of the sketches.

Much that applies to the control rods and pedals of the belt rim type also applies to any other rear brake, and should be read accordingly. Rods in compression are an abomination, and bent rods in tension are little better. Yet both are by no means uncommon. Obviously (the word may be harsh, but it again comes naturally), a strip of steel being subjected to end pressure tends to bend; or, if already bent, on being pulled tends to straighten out. Neither condition makes for greatest efficiency.



When a lug is provided on chain driven machines to permit brake pivot adjustment, some form of locking device is recommended. A suggested method is illustrated.

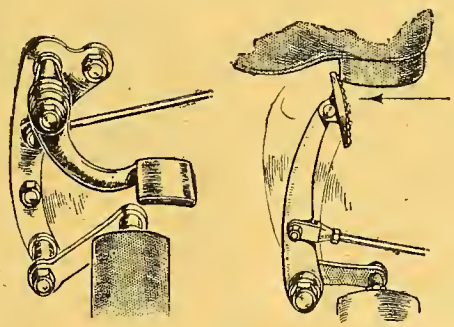
### Mechanical Methods.

In the same way, to take the control gear from one side of the machine to the other—*i.e.*, pedal on the left, brake on the right; or *vice versa*—is not, unless more mechanically carried out than the average motor cycle designer considers worth while, really good design. It is usually, too, quite unnecessary.

On many chain-driven machines the brake pivot is carried in a slotted lug on the rear chain stay, to allow for transmission adjustment. It seems time that some sort of safety locking arrangement was designed to prevent the nut working loose and allowing the whole brake gear to slide away from the drum, and so become inoperative when most required.

Progressing, logically, to the pedal, convenience of manufacture is again found holding pride of place at the expense of convenience of operation. Far too many pedals are set so that a forward kick, instead of downward pressure, is required to actuate them. In some cases the pedal is absolutely vertical, and no amount of adjustment will allow the brake to remain off after an angle of 20° has been passed. In consequence, the rider gets no leg leverage until the brake slips right on, and he finds himself, if still in the saddle, standing on the brake, with all sorts of possibilities of skids—dry or wet.

When, however, footboards are fitted instead of footrests, this type of pedal is just permissible, for then, usually, the heel has a convenient anchorage. At the same time, it is infinitely preferable that the pedal should be 45° from the vertical before it takes effect. Different riders favour different ways of operating the same pedal, but the designer's motto should always be "convenience."



Gradual or powerful application is possible with the pedal on the left, but the vertical type on the right usually must be operated by a kick forward from the knee, which allows no leverage and consequently no real control.

It is admittedly difficult to design foot control, for a machine equipped with only one pair of rests, that is (1) out of the way when not wanted, (2) accessible when needed without any appreciable change of position on the part of the rider's foot, and (3) capable of gradual application from a gentle touch to maximum pressure; but it is not impossible. One British "single" at least embodies all these qualities.

Most pedals are too short and too small. The longer they are, the more effective—within limits; the bigger, the more easily "found," especially by the Hutchinson-booted driver; indeed, there seems no reason why a three-inch bar should not extend right out from the usual diminutive foot-lever proper.

### Band Brakes.

Probably eighty per cent. of present-day machines are fitted with one type or other of rim rear brake, but the internal expanding design is gaining ground. Practically all cars use the latter method or its variation, the external contracting band, but I am by no means convinced that this is a case where we should follow four-wheeler practice. Properly designed, there is little to choose between the belt rim or band type in smoothness or efficiency; but the latter is probably more expensive to manufacture, and is more complicated, mainly because there is more concealed mechanism—in my opinion, the chief defect of the type. Careful design and careful workmanship are essential to ensure that it is water- and oil-proof; and, unless knock-out spindles and detachable hubs are used, it interferes to a certain extent with wheel detachability.

### Unnoticed Friction.

Of the two band types, as fitted to motor cycles, the internal expanding design seems preferable, and is considerably the more popular. With a thoroughly good lining it is most effective, and does not require frequent adjustment, although all users are recommended to satisfy themselves that it is absolutely out of action when "off." Much power may be unknowingly absorbed by a neglect of this simple precaution.

Bowden control is sometimes used, but, although extremely neat and, for a time, efficient, there must be a very heavy cable to avoid stretching or concealed (and dangerous) fraying after prolonged use. I have a purely personal suspicion of this type of control for a service brake.

For the elaborate sidecar outfit with interchangeable wheels, the expanding brake is undoubtedly the most convenient and on the front wheel of the solo mount it has several advantages, for a heavy dummy belt rim does not improve steering, especially at speed.

**Braking Systems of To-day.—**

However, before discussing front brakes in detail, one other general system deserves comment and commendation—the external shoe on the full-sized cylindrical rim. At present the Rudge is the only machine so fitted on both wheels; the new Rover front brake is on the same principle. The scheme is simple, very neat, and, with a large pad, very efficient indeed. It also permits fully interchangeable wheels to be used.

### Front Brake Requirements.

Not one-tenth of the machines on the market to-day are fitted with really useful front brakes. Perhaps it is just as well, for they are dangerous things in the hands of a novice, although very desirable, expertly used, on precipitous down-grades.

When the old-fashioned horse-shoe rim design is standard, it may be safely assumed that the manufacturer intends it more to comply with (or to evade) the law than to assist the rider. It should, and will, by those who dislike rusty rims, be used accordingly. In its best form it is quite usable—in emergencies.

Dummy rim belts, as already mentioned, are not ideal on a speedy machine, and are unsightly on any mount.

### Neat, Simple, and Light.

Neat internal expanding types have been gaining much ground lately, and rightly so, for they provide as great a retarding effect as is generally considered desirable, and may be quite practicably operated by Bowden wire, thus allowing for spring fork movement. In my opinion, however, something even simpler and lighter still should serve—say, a contracting band, of round section, working in a tiny grooved drum attached to the spokes, very much after the style of a once popular pedal cycle brake. Improved friction materials should provide a wearing and practically unstretchable strap; a Bowden cable would do the rest. One famous firm is at present experimenting with something of this sort.

It is not proposed to discuss sidecar brakes, compensated or otherwise, at present; but a few words on future possibilities for solo motor cycles may not be out of place. By reason of the steering and springing arrangements of to-day, it is, to all intents and purposes, impossible to design automatically compensated front and rear wheel brakes, rod operated, and controlled by a single lever. This is a pity, for no data are available as to the effect of such a scheme on a single-track vehicle.

### More Data Required.

Would equal braking on both wheels provide the most efficient retarding action, least disturbing to the machine's equilibrium? Or should the rear wheel be retarded always slightly more than the front, or *vice versa?* Popular belief says that the front wheel should never be severely braked, but it is not unlikely that this is based on the general inefficiency and "roughness" of present-day designs. When, as coming down a steep hill, the greater weight is on the front wheel, that wheel should certainly be braked.

Hydraulically operated brakes appear to have possibilities, and might certainly provide solutions to the above queries. Flexible oil piping might be led to both the front and rear wheels of a motor cycle, and two separate pressure controls would provide some extremely interesting experiments. Anyhow, finality has by no means been reached.

## RAILWAYS AND ROAD RATES.

IT is not unusual for the railway interests to lament their hard fate in so far as the payment of road rates is concerned. Railway managers sometimes talk about the "vast" annual sum contributed by their companies in highway rates, but, when the figures are analysed, it would not seem that these payments are quite so vast as might be anticipated.

The Secretary of the C.M.U.A. has gone into the matter, and tells us that the total highway rates paid during 1920 by all the railway companies in Great Britain amounted to £1,635,000, this figure including the rates paid in respect of motor taxation on railway-owned road vehicles. Against this sum may be compared the £9,000,000 provided by direct motor taxation, a great part of which is found by the owners of vehicles which do far less damage to road surfaces than is caused by the railway motor vans that collect goods and merchandise. Upon the whole, therefore, we have not very much sympathy to waste upon the railways as road ratepayers.—*The Autocar.*

# WHO SUGGESTED THE T.T. RACES?

## The True History of the Origin of the Tourist Trophy Races for Motor Cycles.

THOUGH it is true that the idea of an International Motor Cycle Road Race might be organised in Great Britain was mooted in the course of a private conversation, as mentioned by a contemporary, the proposal arose out of the original Tourist Trophy for cars given by Lord Montagu of Beaulieu and first run off in the Isle of Man in 1905. The actual suggestion that a motor cycle race should be organised on similar lines came from the late Mr. H. Walter Staner, at that time managing editor of *The Motor Cycle*, at the Auto-Cycle Club annual dinner held at the Criterion Restaurant on January 17th, 1906.

### The Birth of the Motor Cycle T.T.

Quoting from our report of Mr. Staner's speech, "he hoped that some competiton could be arranged on the lines of the Tourist Trophy for motor cycles. He suggested that the engine dimensions should be 80 x 80 m.m., and the weight of the machines 130lb., fitted with mudguards, brakes, etc., and should, in a word, be fit to ride as touring machines."

These remarks actually gave birth to the motor cycle T.T. A leading article on the subject was published in *The Motor Cycle* the following week, suggesting details, but the A.C.C. programme was full that year, and the final decision to hold the race was not arrived at till December, when, in the issue of the 12th of that month, 1906, *The Motor Cycle*, then the only journal representing the pastime and industry, announced the fact that it had definitely been decided to organise a Tourist Trophy competition, and that the prize would be presented by the Marquis de Mouzilly St. Mars. The next issue contained the interesting statement that the trophy was to be an international one, "the main object of the competition being to show that British motor cycles can beat their foreign competitors." In those days British machines had little chance of winning in a Continental event. For one thing, their design at that period was crude in the extreme and far behind their competitors, and for another the Continental organisers saw to it that the Englishman was placed at a disadvantage. All that is changed now, and the F.I.C.M. sees that there is a "fair field and no favour" for everyone.

The paragraph announcing the preliminary details of the T.T. stated that it had been decided to take an average speed of about 30 miles an hour, and, using this as a basis, the fuel consumption would be worked out. Since the main object would be to encourage the touring motor bicycle in its best possible form, great care would be taken to prevent any form of freak being brought into the race. The trophy would be awarded to the machine covering the course in the fastest time on minimum fuel consumption.

Such is the true and accurate account of the origin of the motor cycle Tourist Trophy race. It owed its birth to the suggestion of one who has passed into the great beyond, whose name is revered by all who knew him and whose work for the motoring movement, for which he lived, only those who worked with him can realise. Of him as of another great man may be truly written, *si monumentum requiris, circumspice*—if you need a monument look around you. Since the quoted paragraphs were written, one can see how the motoring and motor cycle movement, in the development of which he took such a generous share, has grown.

### Official Acknowledgment.

That our facts are correct can be further substantiated by the official recognition by the A.C.U. that Mr. Staner was responsible for the motor cycle Tourist Trophy races, and this fact has been mentioned on several occasions. Quoting from a T.T. programme of former years, "Some eight years ago Mr. H. W. Staner suggested a road race for motor cycles on similar lines to the race for motor cars that had already been held in the Isle of Man." In the same programme credit is also given to Mr. H. H. Collier, who, whilst in Austria in connection with the International Cup Race, mentioned the scheme to Monsieur de St. Mars, but this was not until the middle of July, six months after the A.C.C. dinner.

The brothers Collier were keen supporters of the early races, and shared the honours of winner on several occasions.

It is greatly to be regretted that the donor of the Senior and Junior Tourist Trophies has never seen one of these races run. Monsieur de Mouzilly St. Mars, as he now prefers to be known, has withdrawn from his vice-presidency of the Auto-Cycle Union and has retired from all prominence in the motor cycle movement. It is sad indeed to have to record this, but it may be he will yet relent; even if he does not, his name should ever be remembered as one who did untold good for the sport and industry, as it is to him we owe the two magnificent trophies which have given to the world the finest motor cycle races which have ever been organised.

---

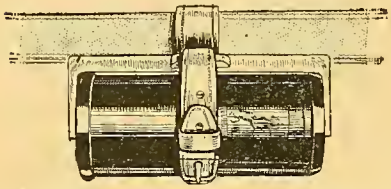
## 200 MILE SIDECAR RACE AT BROOKLANDS.

IT has been decided to alter the date of the Ealing and District M.C.C.'s 200 mile sidecar race from July 29th to June 17th. This will make the event one of the earliest long-distance races at Brooklands, and it is expected that considerable support will be received.

Up to the present there has never been a sidecar race held over such a distance, and it is anticipated that a good deal of information will be derived from it as regards sidecar chassis construction. A strong committee has been appointed to formulate the regulations, and one of its first decisions is to enforce the fitting of skids to the sidecar chassis, which will be capable of supporting the weight of the loaded sidecar in the event of that still all too common trouble—a broken sidecar spindle.

Entry forms have not yet been printed, but it is intended to allow early entrants an advantage in respect of the fee payable. The race will be confined to members of the Ealing Club, so those who anticipate entering may join at any time.

## Emergency Carbide Supplies.

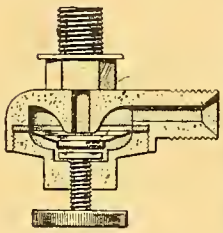


Enough carbide for one complete refill may be carried in the Samson carrier, which is supplied with aluminium bracket and strap for attachment to a frame tube at 2s. (Reg. Samson, Ladywood Road, Birmingham.)

## Double-Spark Ignition.

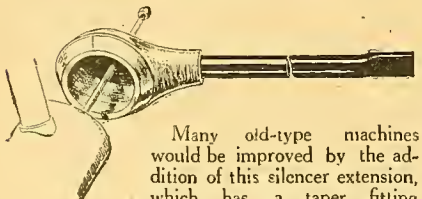
Two simultaneous sparks occur on the new Runbaken "Double-Spark" plug, which is on the double-pole principle, but unusually neat. Price 8s. 6d. (The Runbaken Magneto Co., Ltd., Cheetwood Lane, Derby Street, Manchester.)

## Leak-proof and Renewable Petrol-Tap.



While costing little more than the common type, the Hyatt petrol tap, it is claimed, may be maintained permanently leak-proof and the wearing parts are easily renewable. A flexible steel diaphragm carrying a fibre disc cuts off the fuel supply. (J. Hyatt, 1, Kingsfield Road, Watford.)

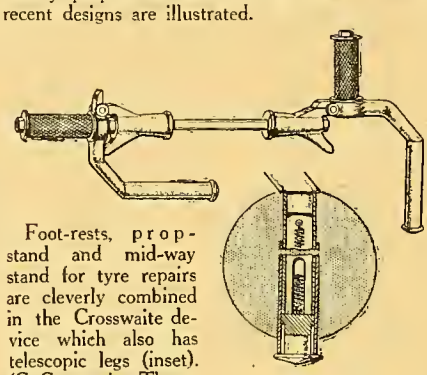
## Silencing Old Machines.



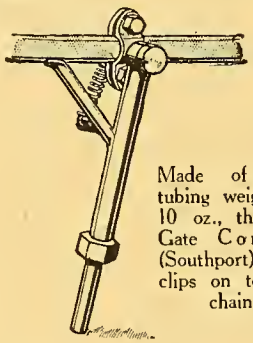
Many old-type machines would be improved by the addition of this silencer extension, which has a taper fitting adaptable to various sizes of exhaust box, 8s. 6d. (James Grose, Ltd., 4, Old Jewry London, E.C. 2.)

## Prop-Stand Developments.

Week by week more inventors and more manufacturers turn their attention to evolving satisfactory prop-stands for solo machines. Three recent designs are illustrated.

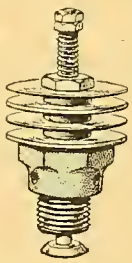


Foot-rests, prop-stand and mid-way stand for tyre repairs are cleverly combined in the Crosswaite device which also has telescopic legs (inset). (C. Crosswaite, Thornaby Hall, Thornaby-on-Tees.)



Made of aeroplane tubing weighing only 10 oz., the Tubular Gate Company's (Southport) stand clips on to the rear chain stay.

Clipping on to the saddle pillar tube the Barker stand consists of a 23in. hinged and spiked rod which is specially intended for use on soft ground. (J. S. Barker, Coningreys, Bloxwich, Essex.)



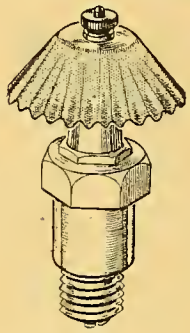
## An Automatic Air Inlet.

Opening only when the engine is throttled down, the Artic valve relieves suction on the jet and saves oil being sucked past the piston rings; it has also minor obvious advantages. 10s. 6d. (Reffells Motor Works, Comshall.)

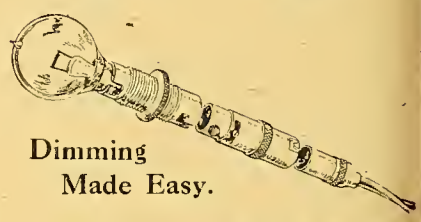
## Cooling the Sparking Plug.

Both these devices are intended to radiate excess heat from the sparking plug.

Left: The "Kool-plug," a radiator specially suited for two-stroke engines having the plug in a horizontal position at the rear. 2/-. (Capt. E. D. H. Robinson, Bourne End, Bucks.)



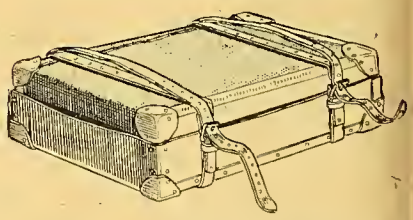
Right: Copper-asbestos washer and radiator combined. 1/-. (The Copper and Asbestos Washer Co., 111–112, Livery Street, Birmingham.)



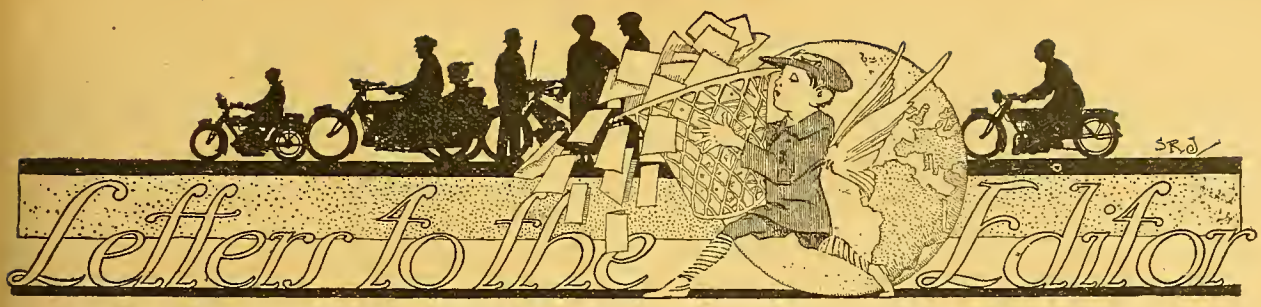
## Dimming Made Easy.

Provided with bayonet joints interposed between the ordinary lead connection and that on the head lamp, the Astra dimmer enables the driver to reduce the light of his lamp and, at the same time, to save current. The resistance has three positions. 7s. 6d. (The Astra Dynamo Co., Ltd., 110, Victoria Street, London, S.W.1)

## Armoured Carrier Case.



Aluminium and wood strips protect bottom of the Wearprufe case when strapped to the carrier. It is made of vulcanised fibre which is absolutely waterproof and has leather straps arranged to secure the case independently of the carrier fixings. Sold in two sizes, 18in. × 11½in. × 6in. (27s. 6d.), and 14in. × 10½in. × 6½in. (26s.) by Athill & Clark, 34a, Haymerle Road, Peckham, London, S.E.15.



The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

### *MODERNISING THE LONDON-EDINBURGH.*

Sir,—Recently the question of double journey events has been raised, but I have not observed any reference to a point which I consider is worthy of mention in favour of such events. To my mind, the horrible monotony of the long run South without any of the competition interest is appalling. I am not usually favourably situated enough to make the return journey a pleasure trip, and must needs hasten homewards with all speed.

The Sunday following the trial is occupied in reaching Carlisle, and the remaining 300 miles to London constitutes the Monday trip. After having ridden for several hours it is extremely depressing to be suddenly confronted with an A.A. notice board conveying the useful information that London is still 200 miles away. E. ATKINS.

### *PRACTICAL THOUGHT MATERIALISATION.*

Sir,—May I beg for a little more space, although on a subject alien to your much-appreciated journal?

In the first place, Mrs. Maude Stansfield wishes to accuse other correspondents of not taking the matter seriously, and not only being highly amused but also having a confused idea of the subject, which is hardly a fair criticism and certainly not a true statement. I am quite serious, and give other correspondents the same credit, otherwise they would not care to waste their time and the time and space of our valuable "Blue 'un."

Thought, like faith, is of no use by *itself*, and might I put forward an analogy by saying that petrol spirit, which is the prime mover in a petrol engine, is of no use by itself, without all the other items embodied in their proper place, thereby making the petrol function the desired way. Similarly thought actuates other members of our body (consciously or unconsciously), and we get a visible and tangible result.

To think upon anything certainly creates an image, and to our limited faculties exists as a reality until we "come back to earth" again, usually with a shock, to discover that our thoughts were mere day dreams.

Might I let your correspondents into a secret by saying that my thoughts and desires have always been of a very ambitious nature, and although some have materialised the majority are still in that ethereal space which contains the most perfect of perfections, and which still holds the secret of the perfect and flawless motor cycle?

First the vision, which is the perfect tour, with no troubles or worries, sunshine and blue skies, then the reality, which includes sooty plugs, punctures, deluges, and all those beautiful additions so "dear" to the motor cyclist. V. N.

'London, N.W.

Sir,—Do you think you could persuade your correspondent Mrs. Maude Stanfield to give us the name of previous owner who *thought* the 4 h.p. Bradbury belonged to him?

I have been wondering if he has a Sunbeam outfit, because if so *I* might *think* of it! HONY CATCH.

Sheffield.

Sir,—With reference to Mrs. Maude Stansfield's recent correspondence, may I, with due humility, suggest that although she is on the right track concerning the efficiency of will-power, so far as its potentialities are concerned, she yet seems to lack the true significance of other factors governing the subject. There is willing *and* willing, there is a right and a wrong way of going about it. I do not deny that—metaphorically speaking—faith *can* move mountains, but, what should chiefly concern us is the motive behind or impelling the will. The writer happens to be acquainted with "a bloke what willed" that he become the proud possessor of a "hot stuff" sidecar outfit, and when one fine day (in the middle of the night) he discovered the very machine unattended, up-to-date, and replete with every refinement—simply screaming to be "pinched"—he lost no time in putting his will into execution. It turned out to be a hotter 'bus than conceived of in his wildest dreams, and he has meanwhile had ample "time" to reconsider this complex will problem.

As one of your able correspondents rightly assumes, "willing," in order to bear fruit, is rendered more easily successful if backed up by a good motive, preferably an unselfish one. This is a *sine qua non*. VIC.

Hendon, N.W.4.

[This correspondence is now closed; several further communications on the same general lines as those published above have unavoidably been crowded out owing to the great pressure on our space by letters of a more practical and purely motor-cycling interest.—ED.]

### *SPEED AND CONSUMPTION OF AN AMERICAN FLAT TWIN.*

Sir,—I read with surprise your criticism of the 1922 4 h.p. Harley-Davidson. I feel sure that there must have been something radically wrong with the machine in question. I have now ridden my 4 h.p. Harley (1920) regularly for fifteen months, and have covered over 10,000 miles on it.

In your criticism you stated that the maximum road speed was 42 m.p.h. Without any tuning, other than carburetter adjustments, I attained a speed of 60 m.p.h. by my speedometer, which I have compared with many others and found correct within 3 m.p.h.

This speed was attained on the main road between Penrith and Appleby. I have never tried it out on the track.

By speedometer, I have many times exceeded 50 m.p.h. with an adult on the carrier, and occasionally with two on the carrier. I have also exceeded 40 m.p.h. with three on the carrier.

I think the above will testify that the 4 h.p. Harley has plenty of power, and reasonable speed.

As to petrol consumption: Last summer I rode down from Appleby to Newport (Salop), at an average speed of 30 m.p.h. (running time). The total mileage was 185.

When I started my tank was full, containing 2¼ gallons of petrol. When I arrived I had exactly a quarter of a gallon left. This works out at 92.5 m.p.g., which leaves very little to be desired.

As regards the other points in your criticism, I agree with and heartily endorse them.

I think a large majority of the 4 h.p. Harley riders will agree with me.

FOUR-UP-SOLO.

Newport, Salop.

### DROPPED BARS FOR CONTROLLABILITY.

Sir,—"Martinivy" asks why many riders use touring handle-bars, when T.T. or semi-T.T. are far more comfortable. Surely this is a matter of opinion. As a middle-aged rider I find the "sit-up-and-beg" position far less trying to the muscles of the back and neck than the "monkey-on-a-stick" position assumed by my young friends. As to controllability, the T.T. or semi-T.T. may give more of it to the youthful scorchers, but touring bars prove quite good enough for

Canterbury. MIDDLE-AGED TOURER.

Sir,—The motor cycle is now largely used by business men and is not entirely confined to the world of sport. For people who use a motor cycle for business, it is hardly dignified enough to use T.T. or semi-T.T. handle-bars—hence they use the "sit-up-and-beg" pattern.

Can "Martinivy" imagine his local doctor riding a motor cycle with T.T. handle-bars with any dignity?

Thanet. K.N.3242.

Sir,—From the ladies' point of view pillion riding is far more comfortable, for they are able to obtain support by the driver sitting upright, which cannot be obtained for long with dropped bars, as I have more than once noticed with riders of this type. G. W. WALKER.

Sir,—I have been having a rough time of it lately on Black Country roads, and determined to do something to ease my wrists. An hour before I got my copy of *The Motor Cycle* I had mentioned this fact to a certain benevolent gentleman in the trade. He made me a present of a pair of Scott touring bars.

Over lunch I read "Martinivy's" letter, and composed a reply in my mind, setting out the advantages of touring bars from the point of view of comfort and appearance.

At four o'clock the new bars were on the machine. At four-fifteen I went for a trial run. At five the old bars were back again.

In reply to "Martinivy" I have only two words to say —"Goodness knows." SCOTTITE.

Birmingham.

Sir,—Some of the reasons why many people prefer to sit upright are: (first) they like to sit comfortably on that portion of the anatomy best suited for sitting on; (second) they like to see where they are going without having to rick their necks; and (third) they do not admit that the machine is more easily controlled with the rider laying down on the handle-bars. G. PINKER.

Sir,—About two months ago I was persuaded, rather against my will, to bend out my "earscratchers" to a flat position in a garage door and with a wooden mallet. After a trial ride to get used to them I swore I would never again have "earscratchers." The comfort of my machine was increased, the controllability doubled. I never feel backache or wristache. M.A.3078.

Cheshire.

### SPEEDS OF LIGHTWEIGHT TWO-STROKES.

Sir,—I have read with much interest Mr. Cooper's letter of eulogy on his Sparkbrook. I am afraid that I find his speed of 52 m.p.h. rather hard to swallow.

My own 'bus is a Calthorpe, fitted with a 293 c.c. J.A.P. engine. It has only done 1,500 miles, and as I did not open it out till it had done close on 1,000 miles, I have no idea what its maximum speed is. I have done 42 m.p.h. recently (by a Bonniksen speedometer), and that before it had been decarbonised, but I have not yet tried it on Brooklands.

I should like to challenge Mr. Cooper to a three-lap race on Brooklands any time between April 14th and April 28th. As his machine is of smaller c.c. than mine, I will grant him a minute start if he wishes. I have no experience of racing, and I challenge him solely in a sporting spirit.

A. H. GRUBB.

Sir,—Will Mr. Cooper kindly give the gear ratio used when he attained 47 m.p.h. on the Portsmouth Road? With a top gear of 4¾ to 1 my maximum speed is 41 on an

London, S.W.9. IXION-VILLIERS.

### WANTED, PERFECT GOGGLES.

Sir,—The ordinary English goggles (or goggle) is a detestable thing, as ugly as the word. I refer to the chenille elastic type. It is unsightly, uncomfortable, and hot, soon gets dirty, and is almost impossible to keep clean. I have two pairs of what are called "eye protectors," both of American make, which are altogether superior. One pair was got from an American Army dump in France, and consists of large spectacles of a pale green colour with leather side pieces. The other pair I picked up at an optician's. It is called the "Rodaplane" eye protector, and somewhat resembles the popular tortoiseshell spectacles, with pale yellow glass instead of lenses, held on by wire springs over the ears. There are not even any side pieces, and in my experience the latter are quite unnecessary.

I notice that "flying masks" are being sold at greatly reduced prices, and I am not surprised.

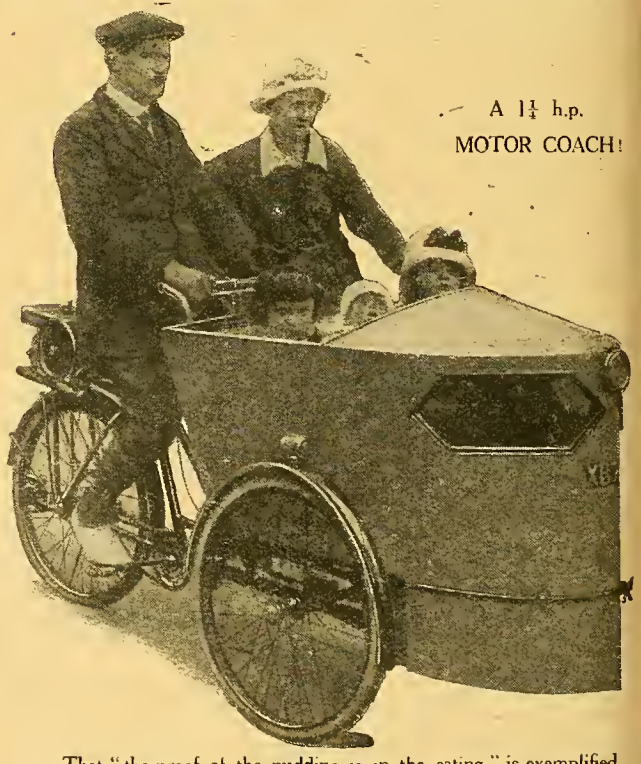
I trust some English makers will produce a light spectacle type of goggle—not a mask—before long. H.L.L.

London, W.C.

### LAND'S END OR THE LIZARD?

Sir,—Seeing that the Land's End-John O'Groats trial is being revived this year, would it not be possible, and *more appropriate*, for this trial to be run to or from the Lizard instead of Land's End? This would be from "farthest north" to "farthest south," the Lizard being considerably further south than Land's End, and the distance could be made the same by branching off at Camborne for Helston and thence direct to the Lizard, or slightly longer by turning to the right at Cury Cross Lanes (Wheel Inn) and thence past Mullion golf links, Poldhu Cove, and through Mullion Village. There are several tricky hills on this route, and the roads are good, and it would be somewhat new ground for motor trials.

Perhaps it might be possible to have a London to Lizard trial at Easter, 1923? H. P HARRISON.



A 1¼ h.p. MOTOR COACH!

That "the proof of the pudding is in the eating" is exemplified by the performance of this frail-looking and apparently overloaded hybrid, descended from a tradesman's pedal tricycle, which has been propelled 8,000 no-trouble miles by a 1¼ h.p. Simplex motor attachment. It is submitted by its designer and owner, Mr H. A. D. Joseph, as a solution of the "Economical Transport for Two" (or more) problem.

### COMPARATIVE IMPORTANCE OF CLASSIC EVENTS.

Sir,—It did not surprise me in the least to read in your leader that, from a publicity point of view, American manufacturers placed greater importance on long distance reliability runs than on the T.T. and similar races.

It is well known to motor cycle salesmen that the amateur will not, as a rule, purchase a speed machine "guaranteed 70 m.p.h." however much he may fancy it.

In the London-Edinburgh and similar runs one gets the results of machines as sold to the public; in T.T. races, Brooklands and American track races, machines are used which the public never see on the road, let alone purchase. In fact, there would be practically no sale for them if they were marketed. A. C. ROBBINS.

Sir,—Some months ago it was reported that the Harley-Davidson Co. had decided to retire from the racing game in America, and this announcement was to my mind an admission of the fact that purely speed events are not worth the money spent on them from a publicity point of view.

I have for many years advocated the importance to the "trade" of such trials as the classical London-Edinburgh and London-Land's End events. As a means of popularising motor cycling, I think these two events do more good to the trade than any other half-dozen trials put together. Crowds of people turn out along the London-Edinburgh route year after year to witness the passing of the competitors, and the predominant impression created in the minds of these thousands of onlookers must be that the modern motor cycle is wonderfully reliable.

Then again, when somewhere about 90% of the competitors arrive in Edinburgh dead on time this fact is widely reported in the press and read by millions, and this cannot help but be beneficial in bringing before the public the wonderful reliability of the motor cycle, apart from its appeal as a sport and pastime Once the general public thoroughly believe in the economy and reliability of the motor cycle a large influx of new comers to the ranks of motor cyclists will result.

I do not wish these remarks to be misunderstood. I fully realise and appreciate the great value of the T.T. Races and other long-distance speed events, which in the past have greatly tended to improve the breed of motor cycles. There will always be a sporting element in motor cycling. As a sport, the motor cycle has many advantages over the car; but as time goes on the sporting element will be in the minority, and the great rank and file of motor cyclists will in the future select machines more for utility purposes than for sport.

I observe that the M.C.C. proposes running a trial from Land's End to John-o'-Groat's, and I, personally, welcome this proposition, although I think it is a somewhat ambitious undertaking for a club to tackle. I should like to see the A.C.U. organise a 1,000, or, better still, a 2,000-mile trial for stock machines, the trial to be run over average roads, such as the classical End-to-End route. Such a trial run on straightforward lines similar to the Scottish Six Days would, in my opinion, do far more to popularise motor cycling than the usual A.C.U.'s Six Days Trial, the conditions of which are, as a rule, too complicated to interest the man in the street. HUGH GIBSON.

### ASSEMBLED MOTOR CYCLES.

Sir,—As an enthusiastic motor cyclist not connected in any way with the industry, I have encountered in my experience machines of the "special design" class that were not altogether above reproach, and some in the "assembled" category that were excellent both in design and construction, which shows that the *type* of machine is not necessarily a criterion of the quality. In the case of "assembled" motor cycles, I am now instancing those where care and attention are paid to choice of materials and finish—the various components are generally the product of years of specialisation, particularly the engine, gear box, hubs, and even frame components, carburetters, etc.

As a matter of fact, it seems to me difficult to draw the line of demarcation between the "specially designed" and the "assembled" motor cycle. Here, for instance, are some of the component parts which not all the leading motor cycle manufacturers (the "specialists") manufacture in their own shops: Drop-forgings for lugs, etc., steel tubing for frames and exhaust pipes, rims, spokes and nipples, mudguards, saddles, tank fittings, springs, magnetos, and sparking plugs, etc.; while, in many cases, in addition to these, castings are "farmed out," also tanks, carburetters, and silencers. Where, then, is the firm making the motor cycle throughout? In my view, then, there seems very little to choose between the two types of motor cycle.

One would like to know why, given harmonious design, accessibility to all parts, conscientious workmanship, and good finish all round, the "assembled" machine should not be quite as good as the so-called "special" product of any firm. E. S. HODGSON.

### TWO SIDES TO THE GARAGE QUESTION.

Sir,—With regard to the recent depression in motoring matters, and the regrettable circumstances under which many garages and repair shops are being forced to close down or carry on at a loss, would it not be well for a reputable journal like *The Motor Cycle* to draw attention to the necessity of these folks "putting their house in order." I refer more particularly to the gross carelessness, and equally gross charges, that are evident practically everywhere in connection with even the smallest jobs that are frequently necessary in connection with motor cycles.

It would be very interesting to hear the experiences of *confreres* in this respect; but, even allowing for the extra cost of things everywhere, if others have had experiences in any way resembling my own there is no room for wonder at the paucity of work at the motor "shops" at the present time. As examples of the sort of thing I refer to, the following may be of interest:

At one place I was charged 8s. 6d. for replacing the front cross bar of the sidecar, consisting of an iron rod ⅜in. thick, with two ¼in. holes and about an inch of thread for nuts at each end.

At another place I was asked 1s. for soldering a loose nipple to the petrol pipe; this came loose again in a few miles, and another shilling had to be expended for faulty work.

I enquired at a further garage what it would cost to put a sheet of very thin aluminium on the nose of the car (about 18 square inches of metal being required), and was informed that it could "probably" be done for £3! (I have obtained the aluminium (polished) myself, and cut it to shape, and fixed it at a total cost of 4s. 6d.!).

And so on. The worst part of this sort of thing, to me, is that when one has to leave a nicely kept outfit at a garage there is never the least assurance that it will be taken away again with out some irritating, and totally unnecessary, damage done during the repair, such as a bent speedometer bracket, scratched and dented tank, broken mirror stem, the enamel on sidecar irretrievably ruined in places, etc., to quote a few personal items. And the expression of amazement on the faces of some of these "repairers" when complaint is made of this sort of thing would be intensely funny no doubt in a stage sketch, but is only indicative of a stunted intelligence to people who take a pride in their mounts, and do not consider it necessary for a cycle or sidecar outfit to resemble a "W.D." machine after service on the Western front.

London, N.17. SCALE.

Sir,—With reference to your leading article recently in *The Motor Cycle*, we desire to mention that we cordially welcome motor cyclists who might be making Torquay their holiday centre, and for over six months have quoted our charges for garaging as follows:

| | Per night. | Per week. |
|---|---|---|
| Solo ... ... ... ... ... | 6 | 2 0 |
| Sidecars ... ... ... ... | 1 0 | 4 0 |
| Three-wheel cycle cars ... ... | 1 0 | 4 0 |

Further, our minimum *and maximum* charge for accommodation during the day is the same for solos and sidecar, viz., 6d. for any reasonable time (two or three hours).

These charges were *never varied*, even in the height of the season when (owing to lack of space, which we hope to remedy in the near future) we were continually, and most reluctantly, having to turn away would-be clients.

These charges, we think you will admit, allow of no further reduction, even in these days of falling prices, but it is not our intention to increase them, even though we did not make our "full year's profits" in a few (all too few) busy months. p.p. THE BABBACOMBE GARAGE.
E. R. BEST.

Sir,—With reference to the editorial article in a recent issue concerning garage charges, and your suggestion that this question offers scope for activities by the A.A. in the direction of classifying and standardising charges, by arrangement with the proprietors, this is a matter which has for several years past received the attention of the Automobile Association.

All appointed garages which are indicated in the A.A. Handbook have been carefully inspected, and their classification in the Handbook is strictly according to the facilities offered.

With regard to standardisation of charges this is a somewhat difficult matter, as naturally the charges made by a high-class establishment in the centre of a large town, catering for every need of all classes of motorists, could hardly be expected to be the same as those made at a small wayside establishment where rent is considerably lower, and garaging arrangements, owing to the limited space available, are not a regular feature of the business.

The Association, however, is always ready to assist members who feel that they are overcharged.

STENSON COOKE,
Secretary, The A.A. and M.U.

Sir,—We note an editorial article with reference to varying garage charges for motor cycles, and a complaint is made that the charge for motor cycles varies from sixpence to a shilling and sixpence an hour. Like yourself, we consider this charge exorbitant, and beg to enclose a card, from which you will see that the various garages in this town (Paignton) came to an arrangement in the matter of tariff of garage charges. (The charges in no case exceed 1s. 6d. per day.)

COLLINS, ERMEN AND CLARKE.

### *NER-A-CAR ROAD EXPERIENCES.*

Sir,—May I ask your favour to air my views of the Ner-a-Car in your columns, this machine being quite a departure from the usual construction of a motor cycle or two-wheeled vehicle.

The construction of the machine on the whole is perfect, certainly one that appeals to each sex. It has a very low riding position, and the machine certainly does not skid in grease. It is also one of the cleanest machines I have ever ridden, and the easiest to handle. All parts are very accessible considering the compactness of the design.

Its defects are: Engine difficult to start, troubles chiefly due to the lubricating system employed, that of mixing the oil with the petrol, the disadvantages of which are known to most riders of machines running with this system, one of the chief being that one cannot rely on garages to give one the correct proportions when asking for refills. The lamps are quite inadequate for country riding. I think the makers should have fitted a four-stroke engine of 2¾h.p.

Maldon, Essex. DESUNT CETERA.

### *UTTERLY AMAZING SPEEDS.*

Sir,—With reference to Mr. G. F. Randall's letter in your issue of February 16th, which obviously refers to the Henderson *de luxe*, we would like to point out that the extract quoted is from a bulletin, in which appears a copy of an article written by Mr. L. E. Fowler, Editor of *Motor Cycling and Bicycling*, who also was the rider of the motor cycle mentioned.

We, and we believe your readers also, have a very high opinion of the value of any statements made by you in your editorial columns, and we see no reason why anyone should make a feeble attempt to ridicule a statement made by a well-known contemporary by the questionable method of omitting certain vital phrases.

The article clearly states that at first attempt the road was quite bumpy, tyres entirely too soft, and rider unfamiliar with mount. It was then decided to pump up the tyres, and continue to a stretch of new surface, where a speed of over 80 m.p.h. was obtained. Surely it is not surprising that anyone should improve their speed on a smooth stretch with properly inflated tyres when it is admitted that the first attempt was given up owing to the unfavourable conditions, and, in the words of the author, "discretion being the better part of valour."

If your correspondent thinks he can increase the speed of his motor cycle by simply pumping up the tyres, we shall be pleased to pump his tyres with a power-driven pump to his requirements, when he will be able to satisfy himself that the remarkable performances described in catalogues and bulletins must be due to the new *de luxe* engine and not to the tyres.

MELCHIOR, ARMSTRONG & DESSAU (LONDON), LTD.,
H. HARRIS.

### *IS "THE GAME" WORTH THE CANDLE?*

Sir,—I cannot say that I agree with "Zenith Solo" and others that "the great game" is not worth the candle. They do not appear to realise that one of the chief objects of a freak trial is to supply the riders with a day's sport.

Who said that such trials *were* a test of reliability? For, as "A. McL." stated in his article, "it is driving ability—and luck—that counts!" Therefore let these critics be contented with the monotonous split-seconds competitions, for, after all, "the great game" is only for the real sportsman.

Bradford. A PLAYER OF THE GREAT GAME.

## SUMMARY OF CORRESPONDENCE.

"N.K. 1660" does not agree with Mr. H. F. Brockbank's statement, in his letter regarding an amateur T.T., that the majority of sporting amateurs reside in Lancashire and Yorkshire!

Last year Mr. G. Emanuel stayed at an old-fashioned refreshment house between Machynlleth and Dolgelly; on the south was a very picturesque lake, and the road to Machynlleth wound up a steep and long hill past some slate quarries. He wonders if any reader can identify the place from these particulars, as he wishes to reserve accommodation there again this year.

"Normac," whose wonderful fuel and speed records on a pre-war Triumph have aroused so much controversy, now confesses that the spirit used was "Johnny Walker No. 1."

After much starting-up difficulties with his new two-stroke lightweight, Mr. C. G. New found a satisfactory solution in the Roth and West plug, with extra sparking gap at the firing points, described recently in *The Motor Cycle*.

"Impervis" puncture-sealing compound and "Erusa" belt dressing are recommended by Mr. R. T. Thomas.

Stretching of a ¼in. chain on a 2½ h.p. light weight was cured by "D.L. 1234" by replacing the offending component with the, apparently nameless, chain fitted to A.B.C. Skootomotas.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "IXION," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

# CLUB NEWS

Inter-club social events are proving very popular, the Bristol M.C. and L.C.C. and the Bath and West M.C.C. having already had two successful meetings. The photograph was taken during the visit of the latter club to Bristol, over 100 members of the combined clubs being present.

### Border M.C.C.

Starting with a social run on April 22nd, an interesting list of events for the summer months was drawn up at the annual general meeting of this year-old club.

### Reigate, Redhill, and District M.C.C.

Trials for single-geared and for pre-1914 machines were provisionally arranged at the annual general meeting, held at the Warwick Hotel on the 16th ult. The hon. secretary is Mr E. F Brewers, 22, Garlands Road, Redhill.

### Manchester M.C.

On the 5th inst an invitation reliability trial of approximately 25 miles will start at the Nag's Head Hotel, Bucklow Hill. Fuller particulars may be obtained from the hon. secretary, Mr. S. J McCann, 5, Blackburn Street, Heaton Park.

### North Wales M.C.C.

In the course of his report at the recent annual general meeting, the hon. secretary, Mr. J. H. Davies, mentioned that during 1921 the membership had increased from 78 to 104.

### Bedford M.C.

On a recent Friday evening members and a few friends of the club assembled at the first of a series of suppers, which took place at the club's headquarters, the Lion Hotel.

### Bradford M.C. and L.C.C.

Since the club has over 300 members a large and enthusiastic gathering is anticipated at the general meeting to be held at the Bellevue Hotel, Bradford, to-night (March 2nd).

### Neath and District M.C.

The club now commences its third year, and considerable progress has been made since its inception. The committee through its untiring efforts has been successful in obtaining the use of Morgan Park and also a delightful stretch of sands known as Rest Bay, Porthcawl (the Welsh Blackpool), for the holding of speed trials during 1922. The social side has been well provided for.

### Hartlepools M.C.

During the past year the membership has increased from 35 to 105 (motor cycle members). At the last annual general meeting it was decided to continue affiliation with the N.E.A.A.

### North London M.C.C.

This year the club will again organise an inter-club rally, probably at Hendon, on Whit Monday, and advance particulars are now available to clubs interested. The secretary of the football section, Mr. R. H Baxter, Livonia, Methuen Park, Muswell Hill, N.10, would be glad to hear if any other motor cycling club has a football team, so that matches can be arranged.

### Bloxwich and District M.C.C.

With the idea of arranging an afternoon's good sport and fun, an open freak hill climb and relay race was held on February 18th. Through the generosity of Mr. G. Arch, a field was chosen which included the necessary undulations.

From the starting point, a bank with a gradient of 1 in 6·7 stretched for 80 yards, with a right-hand turn at the top, immediately followed by a five yard rise of 1 in 3. The rest of the distance consisted of an S bend, with a downhill finish of 1 in 10. The total length was approximately 400 yards, and the course was five yards wide, and was fenced in with stakes and ropes throughout its length.

In spite of the fact that the grass was wet, some fairly fast riding was indulged in. In a few cases heats were won easily owing to the other competitor suffering from lack of wheel grip; but the restriction which troubled most was having to pull up in 20 yards after passing the tape.

In the relay race, the first man rode to the top of the hill, and there transferred his number to his partner's machine, who completed the course.

Results:—Hill Climb (1) R. Smith (3½ Sunbeam). (2) I. Anslow (2¾ A.J.S.).
Relay Race P. Cranmore (3¾ Scott) and N. Wiggin (3½ Triumph).

### Uxbridge and District L.C. and M.C.C.

Taking the form of a social run, the opening event will be held on the 5th inst., to Alms Hill, near Henley. The start is at 2.15 p.m. from the Chequers Hotel, Uxbridge, and any motor cyclists will be welcomed. The club has arranged a very full programme of events for 1922.

### Isle of Wight M.C. and L.C.C.

Dr. E. F. W. Buckett has again accepted the presidency, and was unanimously re-elected at the annual general meeting held at the Wheatsheaf Hotel, Newport, on the 16th ult. Much interest was shown in the programme for 1922. Intending members should join at once; the hon. secretary is Mr. E. H. Darling, Garrison Schools, Albany Barracks, Parkhurst.

### Surbiton M.C.

"With most clubs the opening run opens the new season; with the Surbiton Club this title is used by courtesy only, as our season continues all the year round and therefore does not need 'opening'"—extract from a circular with regard to the run which takes place on the 19th inst. to Ripley (tea at 4.30 p.m.).

### Worcester and District M.C.C.

Among the more important events definitely settled for 1922 are the Madresfield Court speed trials on June 22nd, and a Good Friday half-day reliability trial.

### Basingstoke M.C.C.

On the 19th ult. the club held a most successful trial for the "Fleming Cup," over a very stiff course of three circuits of 30¾ mls. each. Nine checks were operated very successfully, and the winner easily found, but as awards show, there was a tie for second and third places. Results: First, F. G. Hedges (3½ Norton), Fleming Cup; second, W Mansbridge (Royal Ruby), and M. Scales (8 Sunbeam s.c.), tie; third, W. Osmond (2¾ Massey-Arran), and W. Julian (8 Matchless s.c.), tie. £4 was handed to the local hospital as a result.

(*Club News is continued on page* 280.)

# CURRENT CHAT

## Times to Light Lamps.

| | | | |
|---|---|---|---|

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Transport Ministry Staff.

The staff employed by the Ministry of Transport in Great Britain has been reduced during the past twelve months from a total of 702 to 487, which is the total at the present time.

### Open Event in South Wales.

July 1st has now been definitely decided upon as the date of the open event allocated to the East South Wales Centre, A.C.U.; it has not yet been decided as to what form the competition will take.

### Middlesex Police Active.

"As a result of complaints by old ladies and gentlemen with Sandringham hats, whiskers, and spats," writes a correspondent, "there is marked police activity on Brockley Hill, between Canons Park, Edgware, and Elstree."

### Long-lived Neglected Batteries.

Run-down accumulators are apt to go all wrong in a very short time if not attended to; but last week we heard of a case where an exhausted battery had been laid aside as it was for three months, and at the end of that period it displayed no ill-effects and was re-charged forthwith. Is this a record?

### Opinions Wanted.

A very well-known firm of motor cycle manufacturers, whose name is a household word among speedmen, is contemplating the production of a real miniature motor cycle, to weigh about 75lb. and to sell in the neighbourhood of £30. It is to be fitted with a two-speed gear box, and pedalling gear will be optional. What do the public think?

### Railways and the Roads.

Capt. Viscount Curzon and Sir Wm. Joynson-Hicks have given notice that they will move in the House of Commons the rejection of the Railways (North-Western and Midland group) Bill, by which the railway companies seek Parliamentary powers to use the roads for through traffic, the second reading of which has been deferred until to-day.

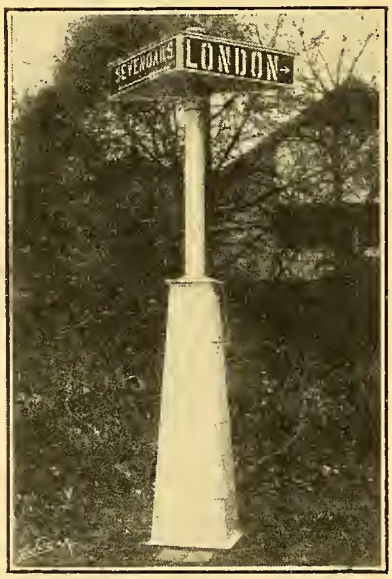
### Joy Riding!

People who have never been in a train are usually old residents in districts remote from the beaten path, but with the increasing popularity of motor vehicles there are now many youngsters residing in large cities who have yet to experience the joys (?) of railway travelling. This was brought home to us the other day when the young son of a keen motor cyclist expressed the wish to ride in a train "to see what it was like."

### Yorkshire Colonial Trial.

As already announced, the open trial allocated to the Yorkshire Centre for June 17th, will be a Colonial Reliability Trial, and will be run on an up-to-date principle (on lines suggested by the Ilkley Club). There will be a premier award in each class, the Centre having unanimously decided that it is impossible satisfactorily and fairly to find "a best performance of the day" from such a variety of entrants.

### A ROAD "LIGHTHOUSE."



An illuminated signpost at Wrotham Heath on the London-Folkestone road, designed and constructed by the Gas Accumulator Co. of Brentford. The illumination is not continuous, but flashes after the manner of the seaboard lighthouse.

## Special Features.

**CONTRASTS ON THE RIVIERA.**
**COLMORE CUP TRIAL.**
**BRAKING SYSTEMS.**

### Congratulations.

Our congratulations to Mr. Hubert W. Hassall, the Norton exponent, who, on Monday of last week, was married to Miss Winnie Gilman, daughter of Mr. Walter Gilman, who is so well known in the coaching world.

### Night Riding.

During 1921 a member of *The Motor Cycle* staff covered many thousands of miles of roads in the dark, and found that, with a good dynamo lighting set, his average speeds compared very favourably with similar trips in the daylight.

### Next Big Midland Trial.

Advance regulations of the second big spring trial, the "Victory Cup" event, organised by the Birmingham M.C.C. on Saturday, March 18th, are now available from Mr. Lawson Clarke, the trial's secretary, 43, Leyton Road, Handsworth, Birmingham. Entries close by the first post on Thursday next. In addition to the "Victory," "Midland," and "Duke" Cups, three further trophies—the "Premier," "Jennens," and "K-Nuts"—have been added to the prize list. Amateur riders only are eligible for the "Jennens" Cup, otherwise the event is open to all members of clubs in the Midland Centre A.C.U.

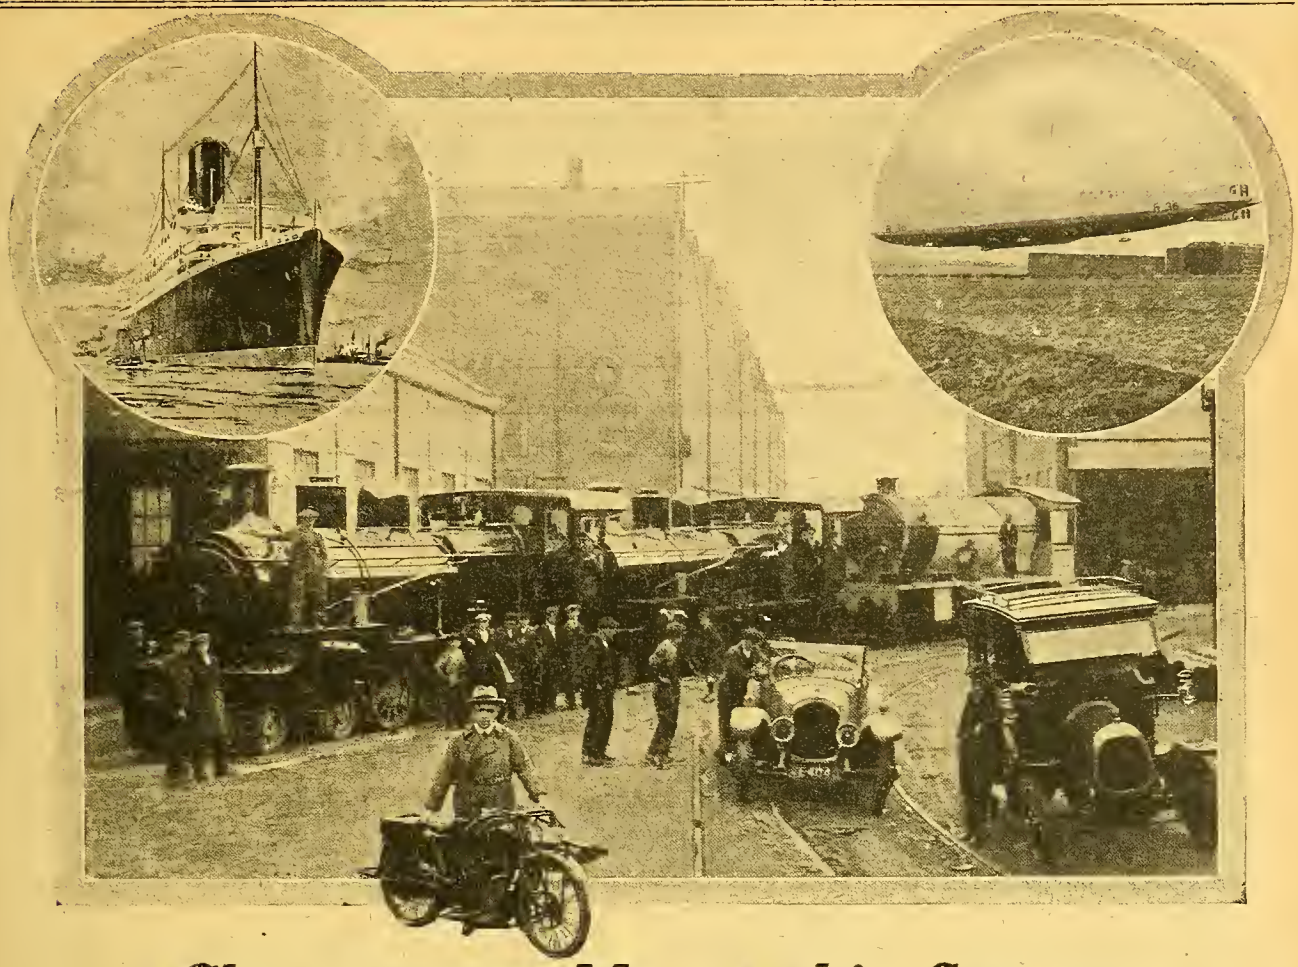
### In this Issue.

Those interested in motor-cycle history should turn to page 271, whereon is recorded the true story of the origin of the T.T. race.

For obvious reasons fewer motor-cyclists go to the Riviera than owners of cars. Nevertheless, readers will be interested in the article which appears on page 260 entitled "Contrasts on the Riviera."

Owners of machines fitted with the popular 8 h.p. Blackburne engine will find many useful hints in the article which appears on page 262. It is written by a well-known competition rider, who has scored many successes with this type of engine.

Considering its importance, the question of braking has not received the attention due to it. One cannot enthuse over the mechanism of a brake as one does in connection with an engine. An interesting article on braking systems will be found on page 268.



# *Choose your Mount this Season*

## *from the famous BEARDMORE Stable!*

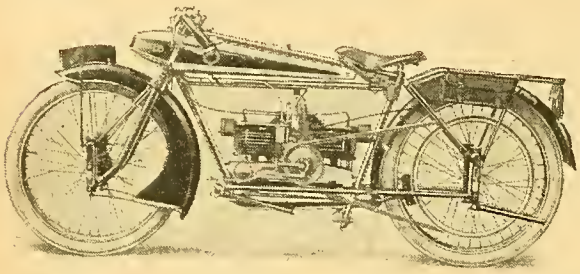
**IN the 1922 race for Better Transport there are no finer entries than those from the famous Beardmore Stable.**
**Airships, aeroplanes, ocean liners, railway engines, motor cars, and motor cycles—in every class the Beardmore entry is a winner.**
**And the "breeders" are not afraid to back their own mounts. Down at King's Norton we make a strong feature of this. In commercial transactions it is called Service-after-Sale.**
**We stand by you when you decide to ride the Beardmore mount that's bred at King's Norton. "Baker's are nice people to deal with"—was how one delighted customer summarised in a sentence the many testimonials our Service-after-Sale has brought us. So stick to "The Old Firm"! Your mount has the right stuff in it if it has the right name on its flanks—**

BEARDMORE
PRECISION

The picture shows some recent Beardmore contributions to the world of Transport:—the 18,000 ton liner, "Cameronia"; H.M. Airship R36; and the group in the Beardmore Locomotive Works, Dalmuir, is of 2 engines for the Nigerian Railway, one for the East Indian Railway, a Beardmore touring car and the Beardmore 'taxi'; in the foreground the spring-frame Beardmore-Precision.

F. E. BAKER, Ltd. PRECISION WORKS
*(Associated with William Beardmore & Co., Ltd.)* KING'S NORTON

'Phone: King's Norton 184-5. 'Grams: "Bachuck, Kingsnorton." London Depot:—112, Great Portland St., W.1. Scotland (Wholesale)—James Robertson, 48, West Nile Street, Glasgow.



**Semi T.T. Model**

# THE QUALITY OF PROGRESS

**To study the specification of the WOOLER is to appreciate the quality of progress:**

Automatic Mechanical Sump Lubrication,
Ideal Front and Rear Springing,
Withdrawable Wheel Spindles,
All straight-tube Girder Frame,
Detachable Spare Petrol Tank.
Superheated Induction System,
Wonderful Petrol Economy
(145 miles per gallon guaranteed)

**are a few of the refinements which speak to you.**

**And when you purchase your WOOLER at £65 you realise what value for money means.**

Write to us to-day for the Specifications of all Models.

**ALPERTON,——————LONDON.**

**THE DEDERICH WOOLER ENGINEERING CO.**

# FREE SERVICE SCHEME

To all those who purchase their New Machine from us we are offering UNIQUE ADVANTAGES in the way of FREE SERVICE over a period of SIX MONTHS.

If you are thinking of buying a machine you cannot afford to ignore this offer. You have everything to gain and nothing to lose by placing your order with us.

NO MATTER WHERE YOU LIVE, whether in the North of Scotland or a few yards from our premises, YOU WILL BENEFIT UNDER THIS SCHEME.

Think of what it means to have your mount kept in tune for a whole season—free of charge.

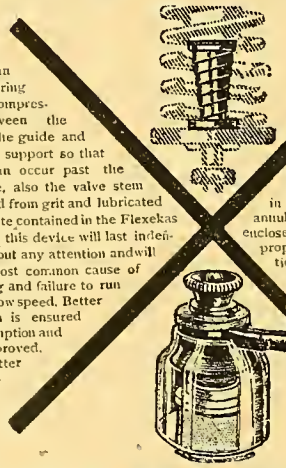
IT WILL PAY YOU TO DEAL WITH US.

*Write for further particulars to :—*

**COLLETT'S** Engineering & Motor Works,
1, RAILWAY BUILDINGS,
STATION ROAD, SOUTH NORWOOD, S.E. 25.

# FLEXEKAS

Flexekas is simply an airtight spring fitted in compression between the bottom of the guide and the spring support so that no leak can occur past the valve guide, also the valve stem is protected from grit and lubricated with graphite contained in the Flexekas. Once fitted this device will last indefinitely without any attention and will cure the most common cause of bad starting and failure to run evenly at slow speed. Better carburation is ensured and consumption and power improved. Valve clatter is also eliminated.



Sparxekas is a dome of strong tempered glass designed on the lines of an H.T. line petticoat insulator which ensures no leakage current across the insulator, of a sparking plug. Embodied in the neck of the dome is an annular spark gap completely enclosed yet visible externally; properly designed to give amplification of current without any strain on the magneto, this device will overcome oiling up of plugs and partial internal short due to dirty insulation. Sparxekas are very neat and give a striking effect.

# SPARXEKAS

**FLEXEKAS** fit any engine and are supplied with special heatproof graphite paste at 2/6 per valve. Extra cartons of paste to be used when overhauling are 1/6 each.

**SPARXEKAS** fit any plug and are supplied complete and ready for fitting under existing terminal nut at 2/6 per plug.

*If your dealer does not stock send direct to the patentee and sole manufacturer—*

**CLIFFORD PRESSLAND, A.M.I.E.E.,**
Engineer, HAMPTON-ON-THAMES.

**Prince as President.**

H.R.H. the Prince of Piedmont, heir to the throne of Italy, has accepted the post of honorary president of the Turin Motor Cycle Club. Needless to say, the Club is delighted at the honour granted to it.

**Moderately Priced British Big Twin.**

In our road test of the 7 h.p. James sidecar it was stated that the price of the machine solo was £160; obviously, this actually referred to the complete outfit, the motor cycle alone being only £125 (Magdyno extra in both cases).

**Mayor and Motor Cyclist.**

The Mayor of Lewes, Alderman C. Patrick, J.P., who is also president of the Lewes and District M.C.C., is an enthusiastic motor cyclist, and can often be seen astride a 2¼ h.p. two-stroke Royal Enfield. He claims to have been one of the first owners of a motor cycle in the town.

**Hill-Climb in Czecho-Slovakia.**

On April 16th a hill-climb will be held on the Zbraslav-Jíloviste, near Prague. The hill is 5½ kilometres (3 miles 770 yards), and the course comprises several bends (one of the "S" variety) and a maximum gradient of 1 in 11. The organisers are the Ceskoslovensky Klub Automobilistú de Prague. (Phew!)

**Motoring in South Africa.**

Statistics concerning the number of motor-cycles in actual use in South Africa show that from October 31st, 1920, to October 31st, 1921, there was an increase in motor cycles from 7,289 to 7,372. During the same period cars show a slightly greater increase, from 11,120 to 12,880. Nevertheless, considering the type of road which we are apt to associate with South African conditions, the number of motor-cycles in use is a clear proof of the reliability of modern machines under hard conditions.

**Promising Support for Scottish Trials.**

Already forty entries have been received for the Scottish Six Days' Trials, which start on Monday, May 1st.

**Inter-'Varsity Hill-climb.**

Next Saturday, as already announced, an inter-'Varsity speed event, run on a team basis, will be held on Aston Clinton Hill, near Tring, commencing at noon.

**Sidecar Skids.**

The regulations governing the 200-mile sidecar race on June 17th will demand that skids are fitted as a precaution against accidents should a sidecar shed its wheel.

**V-neck or V-twin?**

Under the motor cycle advertisements in a provincial paper we read: "J.A.P. silk-embroidered blouses, 7s. 6d."

**Lighting of Road Vehicles.**

The question of vehicle lighting is at present under consideration on reports made by the Departmental Committee on Lights on Vehicles.

**One British Paris-Nice Entrant.**

Entries for this year's Paris-Nice trial include only one British rider—Wood, on a B.S.A. Previously this event has been well supported by Great Britain.

FIRST TEST IN LAST SATURDAY'S COLMORE CUP TRIAL.

E. A. Barnett (2¾ Francis-Barnett) and A. J. Dowler (3½ Sunbeam) on Aston Hill, near Weston-sub-Edge, undergoing the Flexibility Test.

# COLMORE CUP TRIAL NOTES (See pages 281—285).

BUSHCOMBE the impossible! Let us hope that no club has the temerity to include the hill in any future serious trial.

Not a single clean ascent by a solo rider was accomplished, which is not surprising to those who saw the state of the surface.

Marshalling of competitors at the foot of Bushcombe was only thought of halfway through the contest.

Saturday's annual event was most successful, but for that unfortunate inclusion of Bushcombe Hill.

T. C. de la Hay's and George Brough's faces were a study when they stuck, as many others had, in the ruts of Bushcombe. The former was distinctly baulked, however.

The tail-enders of the long procession had to light lamps for some distance.

Springlike weather prevailed throughout, attracting crowds to the distant hills. Hundreds of Birmingham and Coventry motorists were assembled at one or other of the many vantage points.

Saintbury, once a difficult climb, was toyed with by the majority in the stopping and starting contest.

*The Motor Cycle* banners were in evidence at the start and finish as well as the turning point at Cheltenham.

Some spectators returned home feeling that they had had a tonic—the odour of castor oil was so strong on the test hills!

Few people worried about Gambles Lane with such an absurd titbit but a couple of miles away.

At the top of Rising Sun, No. 1, Davison (Levis) fell and opened out the belt rim. He knocked it together again and proceeded.

The Cheltenham control was well organised, particularly considering the large entry.

R.A.C. and A.A. scouts were useful at various danger points *en route*.

As usual, there was much gross bad driving.

W. B. Gibb, who, by the way, could not start, due to water in his petrol tank, declared that Bushcombe was unclimbable in the wet on Friday.

Over-zealous officials on Bushcombe tried to guide the competitors on to the best surface, but their efforts were of little avail, even if desirable at all.

We shall have motor cycles with caterpillar tracks without doubt if the freak hill policy is persisted in.

L. Newey had crowded four speeds into the tiny gear box of his Levis.

### Rugby M.C.

On March 12th the club will hold its opening event, which will take the form of a reliability trial over a course of approximately 100 miles. All correspondence should be addressed to the honorary secretary, Mr. G. Le Champion, Bridport House, Bilton Road, Rugby.

### Rochester, Chatham and District M.C. and L.C.C.

About forty enthusiastic members attended the annual general meeting held at headquarters on February 22nd, the president, Dr. A Packman, presiding. It is hoped to make arrangements with other Kent clubs for hill-climbs as last year. The opening run will be held on April 3rd. The hon. secretary is Mr. H. J. Lawrence, 300, High Street, Chatham, who will be pleased to give any particulars to local motorists interested.

### North West London M.C.

Being desirous of fostering the inter-club spirit, the club has come to the conclusion that it is not necessary to put this into effect on the road alone. It is suggested, therefore, that some methods of social intercourse during the winter months may help things along, and as a start it is hoped to fix up a chess match of, say, six boards a side, with one of the London motor cycle clubs. Mr. H. J. Pooley, 23, Clifton Avenue, Finchley, N.3, would be happy to hear from any secretary interested in the idea.

### Kirkby Stephen and District M.C.C.

A large number of members were present at the recent annual general meeting. Officers for 1922 were elected, including: President, Dr. Hugh Highet, J.P.; captain, Mr. C. J. Ward; hon. treasurer, Mr. G. W. Elliot; hon. secretary, Mr. W. Jackson; hon. trials secretaries, Messrs. A. L. Hook and K. Sayer. A satisfactory season was reported, both from social and financial standpoints, and an ambitious programme was arranged for 1922. All communications should be addressed to the secretary, at Church Avenue, Kirkby Stephen, Westmorland.

## Club News—*continued from page 277.*

### Week-End Club Events.

*Mar. 4.—Essex County and Southend A.C. Paper-chase.*
*Mar. 4.—Oxford University M.C.C. and Cambridge University M.C.C. Hill-climb.*
*Mar. 4.—Coventry and Warwickshire M.C.C. Paper-chase.*
*Mar. 5.—Southampton M.C.C. Surprise Run.*
*Mar. 5.—Manchester M.C.C. Invitation Reliability Trial.*
*Mar. 5.—Uxbridge and District L.C. and M.C.C. Opening Run.*
*Mar. 5.—Bolton and District M.C.C. Opening Run.*

### Ipswich and District M.C.C.

In the form of a reliability trial under ordinary touring conditions, the opening run will be held on the 22nd inst.

On Good Friday an inter-club reliability trial will be held in conjunction with the Norfolk M.C. and L.C.C.

### Berkhamsted and District M.C.C.

An attractive programme is in course of preparation for the coming season, the club possessing six challenge cups. The opening run is expected to take place on Easter Monday. Any motor cyclists interested are invited to communicate with the hon. secretary, Mr. H. Mills, 158, High Street, Berkhamsted.

### East Midland Centre A.C.U.

At a meeting of the Centre Board it was decided to award the Centre Cup this year on the result of the best club team performances in—

(*a*) Speed trials at Grimsthorpe Park conducted by the Lincoln Club on Easter Monday.

(*b*) Hill-climb organised by Burton Club, probably in July

(*c*) Reliability trial conducted by Nottingham Club on August Bank Holiday Monday.

A team is composed of one solo under 350 c.c., one under 500 c.c., and one unlimited sidecar. The annual meeting of the Centre Board will be held in the Recreation Rooms, Bennett's Garage, Nottingham, at 3.15, March 18th.

All motor cyclists in the Derby district who are willing to act as marshals in the Open Trial, Saturday, March 25th, should communicate with Mr. K. S. Topping, 64, Frederick Street, Loughborough.

### Lee, Lewisham and District M.C.C.

On Thursday of last week a most successful meeting was held at the Royal Oak Hotel, Lee, to form a club in this district. It was decided to name it as above. The opening run will be held on the 12th inst. Anyone desirous of joining should communicate with the hon. secretary, Mr. H. W. Allen, 23, Boone's Street, Lee, S.E.13..

### Cardiff and District M.C.

Owing to apathy during 1921 this club has been reorganised and re-officered for 1922, and it is hoped that, by the inclusion of a number of social outings to places of interest in the neighbourhood, in addition to reliability and speed events, largely increased membership will result. Prospective members are invited to the next general meeting on Monday, March 6th, at the Motor House, Wood Street.

### Goldthorpe and Thurnscoe M.C.C.

There was a good attendance of members present at the annual meeting held at the Goldthorpe Hotel. Mr F. N. Greenoff, the hon. secretary, gave a report on the club's activities of the past season. Mr Sayles, the treasurer, presented the annual balance sheet, which showed a balance brought forward of £5 0s. 8½d. The subscription for season 1922 was reduced to 6s.

### Oxford M.C.

On Saturday last the club opened its competition season with a most sporting half-day reliability trial. The start was from Cowley Place, Oxford, on main road to Thame, then Princes Risboro', after which it was a two hours' non-stop, strenuous cornering and hill climbing; the road had to be watched carefully all the time to be ready for surprises in the way of awkward corners and unexpected gradients. Certainly the most amusing item of the afternoon was the inability of "No. 13," Piper (7-9 Indian sc.) to do anything except live up to his unlucky number, and he certainly did do this Twenty-two entered, but two failed to face the starter. Silver medals were awarded to Kenning, Young and Scroggs (Sunbeams), Argyll and Avery (Harley-Davidsons), Pearson (Triumph), Hancox (Zenith-Bradshaw).

## MANUFACTURERS AND FREAK TRIALS.

SOME light on the present attitude of manufacturers towards freak trials may be gathered from the following letter from a well-known competitions rider, Mr. W. H. Carson, written on behalf of Messrs. Bayliss, Thomas and Co., manufacturers of Excelsior motor cycles, to the trials secretary of the Birmingham M.C.C., regarding the forthcoming Victory Cup trial:

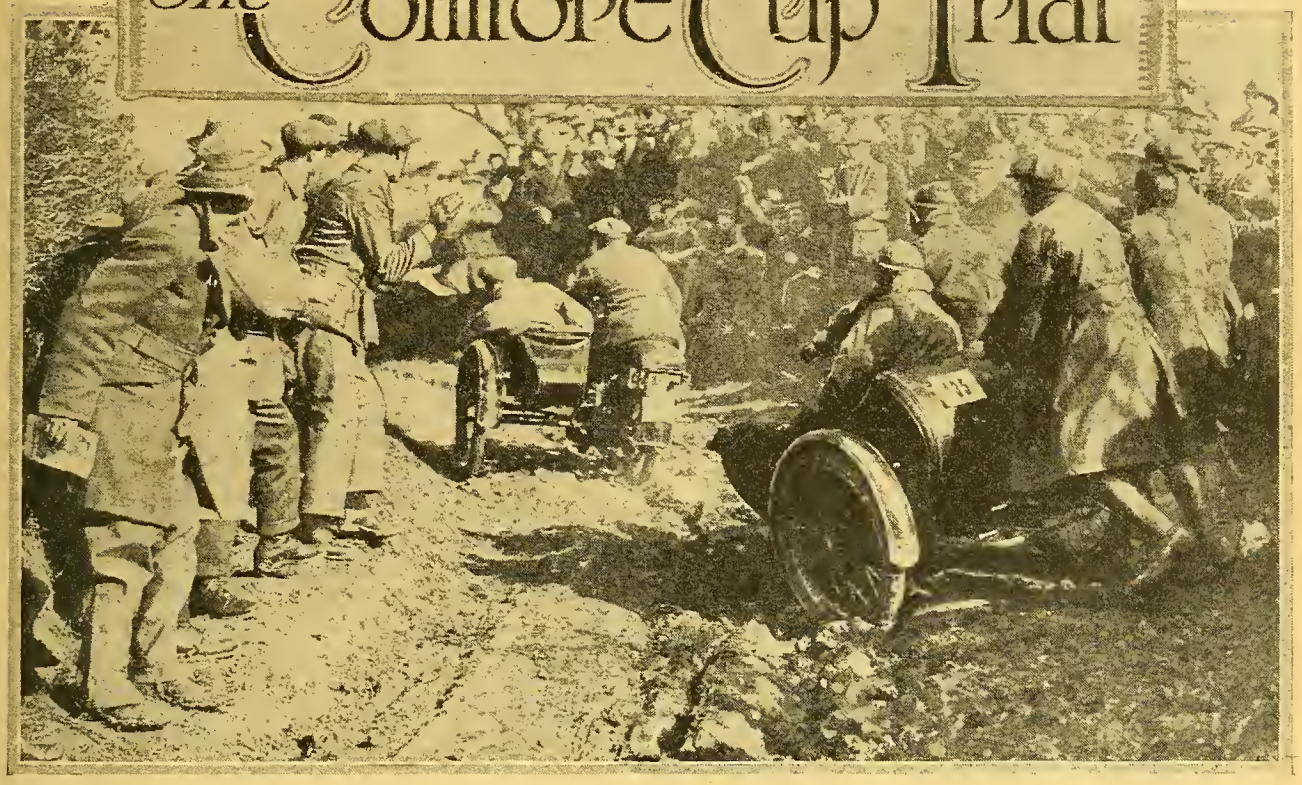
"As a keen supporter of competitions, the writer in all probability will either support the trial by entering several riders even if he does not take part himself, and in any case will probably be able to render you assistance as observer personally.

"There is one point whilst writing you that I should like to mention. You say in your circular letter that the route will be 'possibly within a twenty-five miles radius of Birmingham.' One thing quite a number of manufacturers object to is the inclusion in these trials of freak stunts to find a winner. What I am referring to is the fording of rivers, which, in many instances in the past, have been purposely dammed up to increase the depth. This makes drivers resort to ridiculous additions to their machines in the way of long flexible air intake pipes to carburetters, long exhaust pipes attached to the back carriers, and so forth. It is a pity trials cannot be organised to give some really severe test to the motor cycle without resorting to the inclusion of such ridiculous 'stunts' to find a winner. I suppose it is that motor cycles have got to such a state of perfection that it is more a case of the skill of the driver or sheer luck than the capabilities of the motor cycle.

"Only a few days ago we supported a light car event in which the organisers had included the ascent of two or three fields up a steep gradient with no proper road, having wheel ruts 8in. or 10in. deep, and the remainder of the field one mass of ice. This is no test for a car or motor cycle, but more a test of gripping qualities of tyres, and if you have anything of this kind in your mind, in arranging the course, we certainly would not for one moment think of supporting it.

"If it is to be a sporting trial, giving a machine a reasonable chance of success, we are with you every time."

# The Colmore Cup Trial



Bushcombe, the impossible! The tit-bit of the trial. That no solo rider succeeded in making a clean ascent is not surprising; observe the ruts. A. Watson (4¼ Sunbeam sidecar) made a star ascent, but the veteran T. T. rider, Rem Fowler (7 James sidecar), was not so fortunate. A large assembly of enthusiasts gathered on the hill to witness the ascents.

## A Midlands Classic. Record Entry. The "Freakiest" of Freak Hills Ever Introduced in a Serious Contest.

ONE hundred and ninety-seven starters, 174 finishers, 7 observed hills, a flexibility test, a stopping and starting test, and a sample of "colonial" tracks plus gates to be opened. Such is a summary of the Sutton Coldfield and North Birmingham Automobile Club's trial for the Colmore Cup, and all this incident was packed into a course of 125 miles.

Starting at Stonebridge the competitors followed the Warwick—Stratford-on-Avon—Broadway—Cheltenham course, already familiar to most Midland motor cyclists; there were, however, one or two deviations from the route employed on previous occasions.

### Innovations.

For instance, the flexibility test—the first event of importance—was held on Aston Hill. It would be hard to find a more suitable spot for the purpose, for the road is wide and straight, the surface is good, and the gradient not too severe. Weighing in was accomplished most expeditiously at Charlton King's Station, just before the lunch stop. After this the next important innovation was the inclusion of Bushcombe Hill, the *pièce de résistance* of the day. This hill lies parallel to Gamble's Lane, and the track joins the main Cheltenham-Broadway road at the summit of Cleeve Hill. Its steep, greasy surface defeated almost all the competitors, but of this more anon.

It would be scarcely fair to describe Bushcombe as a new find—an attack upon it was described in *The Motor Cycle* many years ago—yet it has not been incorporated in trials routes, and its inclusion on this occasion was the subject of much comment.

A final change lay in the substitution of a second ascent of Sudeley and some cross-country tracks to Snowshill for the now familiar acute hairpin in Sudeley Park.

### 1922 Models.

The first big Midlands event always evokes much enthusiasm, and amongst the crowd of competitors and spectators at the start there were many 1922 models and just a few machines which have not yet been exhibited to the general public. D. Prentice rode a 2¼ h.p. New Imperial with overhead valves inclined from the cylinder head at a considerable angle. George Denly's Velocette had a cylinder more familiar to Brooklands *habitués* than to trials spectators; it was fitted also with twin exhaust pipes. Barr and Stroud sleeve valve engines were to be seen in C. S. Burney's Beardmore and S. H. Rhodes' Wolf. E. Poppe had out an experimental White and Poppe engine in a Hobart frame. Long stroke T.T. Sunbeams were much in evidence, and Reg. Brown tackled the course with a sporting sidecar attached to a machine of this type and only a 10 to 1 low gear. T. C. de la Hay rode a 4¼ h.p. Sunbeam with smart Berthon boat sidecar; and much interest centred in the McKechnie Victor.

### The Start.

At 8.1 on a glorious morning the indispensable Mr. Alec Ross despatched the first man over the bumpy road to Kenilworth, and thereafter the competitors followed at half-minute intervals. For the first thirty miles main roads were followed, but shortly after Mickleton a notice gave warning of the proximity of the first time check. This was located at a turning to Aston-sub-Edge, and was closely followed by the flexibility test.

Stopping and restarting on Saintbury. G. E. Turner (3½ Sunbeam), W. Bell (2¼ New Hudson) and F. A. Robbins (2½ Triple-H. Liberty) between the tapes.

Here the arrangements were simple and good. Two tapes 73⅓ft. apart were laid across the road, and the intervening space was divided into three longitudinal strips by more tapes. Competitors were required to take not less than 10 secs. in traversing the section, then to accelerate to a third crosswise tape 110 yards away.

The slow test presented little difficulty to modern multi-geared machines, but G. S. Davison, who as usual rode a single-geared Levis, wisely made no attempt to slow down. He was last year's winner of the "Single Gear" Trophy.

### Conspicuous in Flexibility Test.

Amongst so many good performances it is difficult to pick the best, but of the early solo numbers the following were conspicuous: A. Bennett and G. Butcher (3½ Sunbeam), G. Strange (3½ James), E. A. Barnett and D. Atkin (2¾ Francis-Barnett), F. C. Parkes (2½ Sun-Vitesse), E. Arthur (6.5 Brough Superior), R. B. Clark and G. Packman (8 Matchless), D. Prentice and B. Kershaw (2¼ New Imperial), G. Denby (2¼ Velocette), W. Woodcock and A. Rollason (3½ Ariel), S. Rhodes (2¾ Wolf, Barr and Stroud), E. Williams (2¾ A.J.S.), A. Cope and J. A. Newman (3½ Douglas), F. Morgan (2¾ Cotton), L. Bowen (2½ Radco), T. Moxon (2¼ Coventry Eagle), F. Adam (3½ Norton), G. Kirby (3½ Triumph), E. Mundey and W. Bell (2¼ New Hudson). Nearly all the 2¼ h.p. Levises were first-class, but H. Newey's appeared to be considerably the fastest.

E. R. Jacobs (2¾ Wooler) passed with a flat front tyre and H. V. Collins (3½ Norton) made a particularly neat foot change as he shot away, but George Dance hesitated momentarily before getting going.

In spite of clear notices a few stopped, voluntarily or otherwise, and questioned officials as to procedure.

Leaving Aston Hill there followed five miles of side roads, culminating in the descent to Weston-sub-Edge, where the main road led as far as Saintbury and the stopping and restarting test.

### Restarting on Saintbury Hill.

Saintbury, on the Cotswolds, once upon a time an ascent to be reckoned with, proved small fry on Saturday. Even with the added difficulty introduced of stopping and restarting on the steepest stretch of 1 in 6½, most competitors performed faultlessly. There was a perfect blue sky overhead, but the clay surface was somewhat treacherous. The fortieth man, Austin (Coventry Victor) was first to fail, for he stopped his engine when engaging the clutch. Tonks (O.K. Junior) did well at the second attempt, whilst Mrs. Janson (Ner-a-car) showed up well, handling her machine dexterously. Turner (Sunbeam) stopped his engine, while Robbins (Triple-H) ran backwards, his two-stroke engine, too, reversing until it stopped with a terrific bang. Limbird (Mars) and Worsley (Scott) were others who stopped their engines. When Lewis (Beardmore) arrived he decided to retire, having sustained an earlier fall. Sometimes several would arrive between the tapes in a bunch. Watson Bourne was among one batch, and being thrust on to the roadside gave the Press photographer a fright by suddenly brushing him aside. When George Brough opens his throttle things begin to happen—they did on Saintbury, for he performed a magnificent pirouette in the grease, but recovered. Woodfield (James sc.) sooted a plug. Gordon Francis (2¾ Francis-Barnett sc) showed up splendidly, also Hall (O.K. Junior sc.). Bladder (New Imperial sc.) stopped momentarily below the line when his gear jumped out of engagement.

Down Willersey Hill and once again along main roads, the route wound over good surfaces to Winchcombe, and Sudeley Hill. The two big ruts have recently been filled with loose stones, and though the surface in between was greasy, comparatively little wheel spin was noticeable, and the climb presented no real difficulties.

Failures were few and far between, though Harry Reed (8 Dot sc.), who had damaged his gear box in the acceleration test, failed to get up on his high gear and retired. G. H. Goodall (8 Morgan) "konked" to a standstill for some unaccountable reason, and C. Hays (10 Morgan) took the ditch on a greasy part of the hill. For the rest, the three-wheelers behaved well, and T.B.'s, Morgans, and New Hudsons made fast and clean climbs. J. Cave's G.N., the two Rhode cars, and the Deemster were equally sound as regards performance.

C. E. Hemphill (2¾ Excelsior) carefully picked his way up the rough and steep gradients of Gamble's Lane (Sun Rising); Mrs. G. M. Janson (Ner-a-car), the only lady competitor, received assistance.

**The Colmore Cup Trial.—**

Of the solo and sidecar performances there is little to relate: a few came up fast, but generally speaking the riders, knowing that they had nothing to gain by speed, contented themselves with steady climbs with plenty of power in hand. Most meritorious climbs were made by the little sidecar outfits. T. Weaver (2¾ Sirrah sc.) was not quite so fast as G. S. Smith (2¼ Norris sc.), L. Clulee (2½ Allon sc.), N. Hall (O.K. Junior sc.), and G. Francis (2¾ Francis-Barnett sc.), but climbed steadily. S. Wright (4½ Humber sc.) distinguished himself, as usual, by a neat and very quiet ascent.

The following "colonial" section was in no bad condition, and the next event of interest was a time check at Charlton King's Station. Immediately after the check competitors passed on to the station weighbridge, the weighing operations being carried out in the briefest possible time, after which two miles brought the men to a welcome lunch stop at Steels Plough Yard garage.

### Once Dreaded Rising Sun.

The top part of Gamble's Lane (Rising Sun) was in better condition than usual, though, in spite of the fine drying wind, the lower reaches were quite greasy enough to be unpleasant, and J. Doherty (2¼ Levis) fell, damaging his carburetter. G. Davison (single-geared Levis) made a plucky climb, getting over the top with not too much in hand. R. E. Pugh (2¼ Levis) made a fine climb, but his stand was trailing. Dance and Bennett on 3½ h.p. Sunbeams rushed over the top of the hill. H. Collins (3½ Norton), P. Mayo (2¼ Coventry Eagle), D. Atkin (2¾ Francis-Barnett), and F. Woolley (2¼ Sun-Vitesse) all came up well. H. R. Lane (2¼ Levis) footed. B. Kershaw (2¼ New Imperial) was fast, but his tank had been overfilled, and petrol was pouring off the back.

Leaving Winchcombe. J. W. Wills (2¾ Edmund) and H. S. Perrey (4¼ B.S.A.) at the foot of Sudeley, a once formidable hill which almost every competitor took "on the run."

### Soloists on Gamble's Lane.

Mrs. Janson (Ner-a-car), the only lady competitor, received assistance. Hugh Gibson (2¾ Raleigh) S. Rhodes (2¾ Wolf, Barr and Stroud), and E. Williams (2¾ A.J.S.) made fine ascents. T. Thacker (2¼ Velocette) and E. Poppe (2½ White and Poppe) failed. H. O. Hayes (2¾ A.J.S.), and C. Ramstedt (2¾ Cotton) were fast. C. W. Anderson (2¼ Sun-Vitesse) broke a belt on the steep part. C. R. Little (5-7 Coventry Victor sc.) made a very fine climb. E. Mundey (2¼ New Hudson) came up well, but W. Bell on a companion machine, had shed his silencer and plates. J. Whalley (2¾ Massey-Arran) was fast, but neither of the Scotts handled by A. Jacobs or P. Worseley was up to form, and, for some extraordinary reason, N. M. Bligh (6 A.J.S.) was reduced to footing. Westwood-Wills (2¾ Edmund) made one of the best climbs of the day, and gave a very pretty display of riding. G. Lovegrove (2¼ Radco) came up very well. G. Brough (8 Brough Superior) came as fast as was safe, and J. Watson Bourne, on a similar machine, a little faster; nevertheless, he held his machine on the road, though the spectators had a thrill. D. H. Davidson (Indian Scott) and L. Crisp (4½ Humber) were both steady and quiet. C. Green (2¾ Coventry-Eagle) was again fast.

G. E. Greenwood (4¼ Sunbeam sidecar) struck a 2ft. vertical bank with his sidecar wheel. Observe the width of the track which the sidecars were expected to negotiate. T. C. de la Hay, on a sister mount, is at the rear, apparently discussing the state of the "road" with a helper.

### Sidecars do well.

There followed T. F. Blumfield (8 Ariel sc.), T. E. Greenwood, and T. C. de la Hay (4¼ Sunbeam sc.), and R. Brown (3½ Sunbeam sc.), and there was little to choose between these four fine performers, though perhaps the last mentioned deserves the palm owing to his smaller engine and high gear ratio. The James sidecar outfits again distinguished themselves, and F. W. Viles (5-6 Raleigh sc.) came up very well. G. I. Francis (2¾ Francis-Barnett sc.) made a wonderful ascent for so small a machine, and had plenty in hand.

The crowd of spectators, though not inconsiderable, was not quite so large as usual, since a number had passed on to watch the fun at Buschcome Lane, to which spot competitors were led *via* the sharp ascent of Stockall (sometimes known as Post Office Hill.

THREE WHEELERS ON BUSHCOMBE HILL. (Left)—H. F. S. Morgan (8 Morgan) attacked the rutted gradient in his usual style. (Right)—F. S. Spouse (10 T.B.) found that there was no such thing as "picking one's way."

Before 1.30 p.m. the long line of competitors commenced the ascent of the freakiest of freak hills ever introduced in a serious contest. Spectators gathered in hundreds at the corner approaching the summit of the Cleeve Hills, from whence a magnificent panoramic view of the plain below was obtainable.

Of the hill surface, how shall we describe it? Imagine a ploughed field with two exceptionally deep furrows, and loose rocks abounding, and then you have it!

### Bushcombe, the Tit-bit.

All the early men failed—no disgrace in that—until one recognised that, to keep going with any amount of footing, but without outside assistance, was a distinctly creditable achievement. Engine power was not the only consideration, for the little Levises and O.K.'s were just as much in the picture as the bigger machines, for they were naturally more easily controlled. Eric Barnett (2¾ Francis-Barnett) made a very plucky attempt, but was baulked by Hawcutt (Levis), who preceded him. R. W. Duke (Triumph) headed for a 1 in 2 bank and was effectually checked thereby. Dowler (Sunbeam) looked up wonderingly as the spectators yelled with excitement, and promptly fell over. Almost the same fate befell Parkes on a 2½ h.p. Sun-Vitesse. His *confrères* Bishop and Woolley did better still, for they only used their feet to steady themselves and kept going.

To this point No. 33, Haggas (Sunbeam), made the best showing, touching only now and again with his feet. Prentice (New Imperial), with any amount of power in his J.A.P. engine, careered about the course, but needed no help from pushers, which many others gladly accepted. Shepherd (Edmund) charged the spectators when halfway up, whilst Collins (Norton) made a very plucky climb. A Beardmore-Precision, L. A. Rees up, made a fine unassisted climb, but Cecil Burney stopped momentarily and yet got away again. Kershaw (New Imperial) performed conspicuously, followed by Denley (Velocette), who equalled him. Handley (O.K.) climbed the bank by the roadside, yet recovered, and went up well. Hugh Gibson demonstrated the 2¾ h.p. Raleigh to advantage. Then followed a batch of five men, Bown (Bown-Villiers) amidst excitement emerging from the throng without outside assistance.

The spectators credited Rollason (Ariel) with one of the best solo climbs over that cruel surface, clapping enthusiastically. Woodcock (Ariel) and Rhodes (Barr and Stroud) arrived side by side. Clearly one was to hinder the other, and Rhodes was the unfortunate. Then followed a long string of riders who failed to get up, even Eric Williams at one moment lying down in the road with his machine on top of him, whilst Mrs. Janson's Nera-car went up with many willing hands pushing at every available point. Ramstedt (Cotton) broke the monotony by getting up well, followed by Smith (Connaught), who was also excellent. Adam (Norton) was given an ovation for a neat climb. Little (Coventry Victor), the first sidecarist), sandwiched in among the motor bicycles, stuck gamely on until the fateful corner—and stopped. It was not solely a question of power, as Parker-Walker on a 2¾ h.p. Excelsior again proved, for he got up unassisted, though he swerved a lot and recovered himself well.

### Baulking Prevalent.

Mundey (2¼ New Hudson) was hampered by other stranded riders, but managed to restart twice, and got up under his own power. Bell, on a sister mount, did better still, also Gates (Sun-Vitesse). When Turner (Sunbeam) stopped, his back wheel lay in a slippery rut still spinning and sending back showers of mud. Downes (Hobart) crawled up very impressively and never stopped his road wheels. J. Whalley (Massey-Arran) drew stentorian cheers for a very good non-stop climb, followed by Stretton Ward (Triumph), Schobel (2¾ Rex Acme), and Newmans (Douglas), who contrived to make the hill look "possible" after all, though, of course, each man used his feet.

### Skilful Driving.

Bramley (Coventry Challenge) was good, also Smith (Calthorpe), Watson Bourne (Brough Superior), Cooper (Allon), and Faulconbridge (2¾ Coventry Eagle). The last named won applause as he had to scramble round other less fortunate competitors, of whom there was a goodly number hereabouts, some of the failures being due to baulking. One of the best climbs of the day was made by T. H. Meakin, a Coventry amateur riding a Triumph with Ricardo engine. He progressed upwards unassisted to the accompaniment of a crescendo of cheers. Later Crisp's 4¼ h.p. Humber got up well, also Green (Coventry Eagle).

### Passenger Machines on Bushcombe.

Then the sidecars commenced to arrive. Blumfield (Ariel) stopped, likewise Greenwood (4¼ Sunbeam), who for once in a way can be criticised for an error of judgment, for this clever veteran steered his bicycle so that the sidecar wheel came up against an almost vertical bank, which proved an effective scotch to this and many other sidecars. Worse luck, de la Hay was following, and had to stop for the path to be cleared, but he restarted successfully and finished well. To A. Watson (4¼ Sunbeam sc.) credit is due for a fine ascent, for he had the additional difficulty of scraping past Rem Fowler's stationary outfit. Francis, on his diminutive 2¾ h.p. Francis-Barnett sc. made a praiseworthy attempt, but found the surface too much for him. Beesley was the next successful man, on a 3½ h.p. Sunbeam sc., followed by L. Newey, to whom we should award the palm for the

**The Colmore Cup Trial.—**

best passenger climb. Mounted on an 8 h.p. Ariel sc., he was fast, and actually, in order to retain the best stretch of road for the driving wheel, lifted the sidecar wheel so that it cleared the hump which stopped so many, and thuswise continued for fully thirty yards.

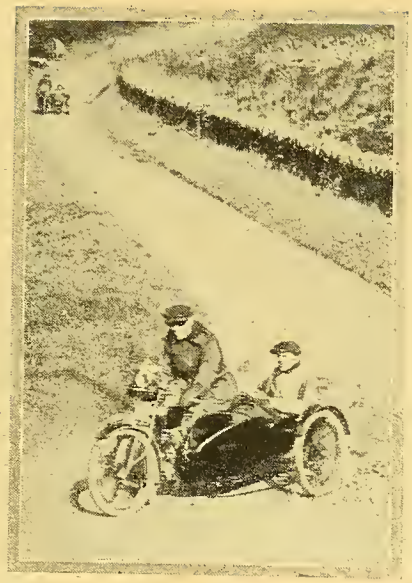
### Extreme Sidecar Types.

After five more had failed Hall (O.K. sc.) made a perfectly wonderful climb for so tiny a power unit. Bladder (8 New Imperial sc.) was twice baulked, and allowed another attempt, and then did exceptionally well. An excellent climb was made by Edmond (Triumph sc.), which won him applause, also Brown (Rex-Acme), who had wisely fitted a Parsons chain to the driving wheel. Brandish (4½ Humber sc.) succeeded, but Sam Wright got athwart the road in a deep rut and stuck there. The air was blue—with smoke of course! Parham (Coventry Victor sc.) climbed gamely, but the odour of castor oil—phew! The first runabout was Meredith's T.B., which showed up creditably; Mr. and Mrs. Morgan, always familiar figures on trials, followed equally well, also Spouse (T.B.) and Carr (Morgan). The New Hudson handled by Yates made a fine ascent, and Cave's G.N. only just failed to account for the gradient.

### Homeward Bound.

A description of the second ascent of Sudeley would be wearisome, since the hill was in no condition to stop any but the lamest of lame ducks, but before reaching the top of the hill the route swung off left-handed in the direction of Ford, and though closed gates caused some little delay the surface of the tracks was not bad enough to cause trouble.

From Snowshill the road led through Broadway to Willersey, but again this hill, which was in good condition, proved no test for the modern machine. T.



In the "colonial" section. One of the several light-weight sidecar outfits in the trial: the Francis-Barnett, which was skilfully piloted by Gordon Francis.

Stevens (7 James s.c.) passed with his front stand down. H. Boynton on a sister machine was going strong, in spite of a fractured sidecar spring. G. Francis (2¾ Francis-Barnett s.c.) was still plugging gamely along. H. Greaves (4¼ Beardmore-Precision) made a fine climb, but changed up too early. B. L. Bird (4¼ B.S.A. s.c.) climbed well. L. Newey (8 Ariel s.c.) was as good as ever, but F. W. Giles (7 A.J.S. s.c.) had a flat sidecar tyre, on which he pluckily finished the course without further damage. The descent of Saintbury finished the last excitement of the trial, but though the rest of the trip was plain sailing to the finish, it was not altogether without incident, as might have been expected of an entry exceeding 200.

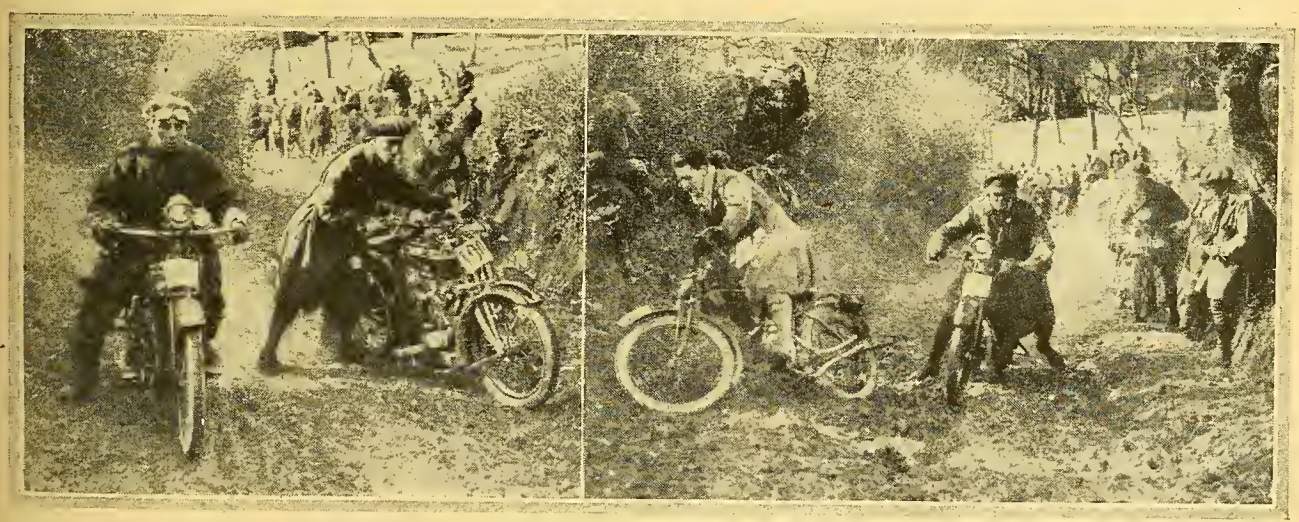
### Hard Luck!

Near Warwick, Neville Hall (2¾ O.K. Junior s.c.), who had undoubtedly put up one of the finest performances of the day, was unfortunately put out of the trial by a most unusual engine failure, a piece of bad luck which brought him the sympathy of all. A mile or two further on D. H. Davidson (4 Indian Scout) gave up with a deflated rear tyre, which persistently tried to come off. J. A. Newman (3½ Douglas) also finished the trial on a flat tyre which had deflated near Stratford-on-Avon.

### A Late Finish.

Though the first man was due to finish at 4 o'clock, the last man was not in till nearly 7, since baulking at Bushcombe had caused considerable delay. At this time the following were posted as absentees:—J. Doherty, jun. (2¼ Levis), A. D. Mayo (2¾ Coventry Eagle), H. R. Lane (2¼ Levis). J. Nicholson (2¾ Omega), T. Thacker (2¼ Velocette), C. W. Lewis (4¼ Beardmore-Precision), F. W. Hughes (3½ Sunbeam), G. F. Limbird (2¾ Mars), D. H. Davidson (Indian Scout), N. Worthington (2¾ Wooler), Woodfield (7 James s.c.), F. Hallam (8 Brough Superior s.c.) P. Pehrson (4 Dunelt s.c.), G. L. White (8 Brough Superior), N. Hall (2¾ O.K. Junior s.c.), W. E. Smith (3½ Norton s.c.), C. Greenwood (3½ Sunbeam), T. R. Gibbins (6-8 Rex Acme s.c.), H. Reed (8 Dot s.c.), F. Morrall (4¼ B.S.A. s.c.), C. Fisher (5-6 James s.c.), C. Hayes (10 Morgan), G. H. Goodall (8 Morgan).

At the conclusion of the trial almost everyone was agreed as to the excellence of the organisation, and the glorious day undoubtedly contributed to the success of the trial. The officials of the Club, and in particular their energetic trials secretary, Mr. Banner, are to be congratulated on their efforts.



If such hills as Bushcombe continue to be included in important trials, the only good purpose served will be the development of machines with caterpillar tracks. It is to be hoped that no club has the temerity to include it in any future serious trial. (Left)—J. Bacon (4¼ B.S.A.) and N. M. Bligh (6 A.J.S.). (Right)—J. H. Mathers (3½ Rudge) and Scally (4½ Humber) struggling to the top after the manner, more or less, of every other solo rider.

## Great Difficulties in the way of Avoiding or Minimising the Dazzle Effects of Head Lamps.

ONE frequently hears the complaint that powerful head lamps make night riding for motor cyclists not only extremely objectionable, but a source of considerable danger when they are encountered. Those who complain vent their expletives not only on the owner of the lights, but on the Ministry of Transport and other authorities for not immediately bringing into force legislation against their use or for providing a sure and efficient means for eliminating the dazzle.

Considering the prominence of the industry concerned in the manufacture of all types of lamps, there must be many brains concentrated on producing some device for effecting this much-desired object—we have yet to find it! If we consider the real cause of our being blinded by a head lamp it might allay somewhat the vigorous attack against the absence of legislation to restrict glare.

### Glare Only Comparative.

The glare is recorded on the human eye, due to the difference in ratio of the intensity of the illuminating light to the intensity of the natural light. The whole problem is resolved round the intensity of the two lights, and this is realised when we consider that the most powerful head lamps in strong sunlight do not affect our eyesight. On a dark night the intensity of the natural light is very small indeed, and it is only a good moon which can be said to help us to any extent.

To meet the trouble by fitting head lamps of similar power to those which we wish to encounter with immunity does not lead us much further. There will now be two opposing beams equal in intensity, but the difference in ratio of the natural light surrounding the vehicles to the illuminating light will be much the same as before, the only difference being due to the stray rays of light which penetrate the space surrounding the vehicles.

It is seen, therefore, that to overcome glare we must either (1) make the intensity of the illuminating light more nearly equal to the intensity of the natural light, or (2) provide an artificial "natural" light to keep the ratios more nearly equal. (3) A third possibility is to produce the rays of artificial light without affecting the vision of an observer.

The word "intensity" can be taken to mean the number of light rays divided by the area through which they pass. In the case of a good parabolic electric head lamp the number of rays emitted is large, the area of the lamp relatively small, and to make the beam "carry," the parabolic reflector sends the greater majority of them in a parallel path; hence the dazzle effect is apparent even when we get far away from the source of light.

Condition (1) could be satisfied by diffusing the source of light and therefore reducing its intensity, and many of the so-called anti-glare devices work to this end. The disadvantage of this method, however well carried out, is the fact that the amount of artificial light, effectively diffused, must be very great to be useful. It is apparent that we cannot make the area of an artificial light very great in order to effect diffusion, as we are limited by size of appliance which can be carried by any vehicle.

### Christmas Tree Illumination.

In considering condition (3) a suitable example would be to suppose that each road vehicle were lit by a number of "fairy" lights, like the decoration of a Christmas tree! This possibility is obviously absurd, but the effect would be towards the ideal, as we should have a largely diffused light, and the ratio of the illuminating light from one vehicle would be equal to the surrounding light of the other which it is meeting. Another way of attaining this object would be to mount head lamps on high standards above the vehicles, and the light from these lamps thrown on to the road would not only illuminate the path ahead, including the road and hedges, but would also illuminate the surrounding space of the vehicle which was being met, and the driver in this latter would not be dazzled, because he would not be constrained to look into the source of light. The position of the

**Head Lamp Glare.—**

source of this artificial light would illuminate the space surrounding both vehicles, making the aforementioned ratios more nearly equal. This, again, is, of course, an impracticable solution, but its effect may be best realised when we consider that we do not encounter any inconvenience from street lamps when driving through a well-lit thoroughfare.

If we, however, refer to what may be called the qualifying condition for overcoming glare, it was stated that the glare is recorded on the human eye, etc. We have so far considered, in conditions (1) and (2), minimising the effect of glare; if, however, we eliminate the element of the human eye, there is no need to consider the effect of the glare! This point is summarised in the third possibility (3). It is extremely difficult to produce an artificial light the rays of which will not affect our vision. The actual artificial light required by any vehicle on the road is an area of light, say, the width of the hedges and not exceeding, say, 2ft above the road surface. To satisfy condition (3) it is necessary to prevent the observer of the artificial light from being able, normally, to see the source of such light. The latter remark is, to a certain extent, answered when we consider the example of head lamps erected at a considerable height above the vehicle, as the observer's eye would not naturally tend to look up to a height much beyond the height of the vehicle which he was meeting. Another way of preventing the observer from seeing the source of light is to put the light very low upon the ground and to fix a shade consisting of a horizontal plane above the lamp. The disadvantage of this idea is that the shade must be very long and the light very near the ground, as it will be readily understood the further away the observer is from the vehicle equipped with this device, the more horizontal will the line of his eyesight become, and therefore the further away he becomes the more likelihood there is of his being able to see beneath the "shade" and so observe the source of light. Another disadvantage must not be overlooked—the lower we put the light on the road and restrict its upward rays, the less likelihood there is of the driver of the driven vehicle being able to see the road any distance ahead, as any unevenness of the surface or a rising gradient will immediately cut off his low-lying rays. Both in the conditions of (2) and (3) the vehicles would, of course, be equipped with low-power side lamps to indicate their width.

Some consideration has been given to the possibilities of fulfilling condition (3) by a device which we read consists of fixing a tube in front of the source of an artificial light, through which all the rays must pass, the result eliminating the possibility of the observer actually seeing its source. As far as the author knows, however, this device has not yet been marketed, and it is too early to predict what it may foretell, but it must be borne in mind that the more we restrict the space through which the artificial light is emitted, the greater must be the power and intensity of that light for effective illumination.

### Compromise the Only Solution.

The problem is an extremely difficult one to solve, and at the present time the most we can do is to suggest a compromise. That the drivers of cars should be compelled to switch off their head lights when they observe another vehicle meeting them is a point upon which there has been much adverse criticism. One thing is certain, that, with the limitation of our means of coping with the problem, and in order to allay the nuisance, motorists must be content to reduce their speed and drive with a light which does not project a penetrating beam a long way ahead. They will in this way make it easier and safer for the majority of road users than driving at times without any proper light at all. Dimming switches, possible on all electric sets (which are usually the worst offenders), used generously, provide a popular and appreciated solution. "Dipping" head lamps, too, have possibilities.

The author suggests that head lights should be placed as high up as possible (in the case of limousine cars, on the top of the roof); that legislation be brought in prohibiting lamps from being set to project a beam on the road, say, further than 200ft. ahead; that the emission of the light be as much diffused as possible; and that light must be allowed to fall on the road actually at each side of the vehicle-carrying light, thereby making it easier for others meeting the vehicle to see the boundary of the road. D. RIPLEY.

# TOURING WITHOUT THE SIDECAR.

ONE of the problems of the confirmed sidecarist who sets out on a solo tour is to find room to stow away the luggage and spares that are usually dumped somewhere in the sidecar.

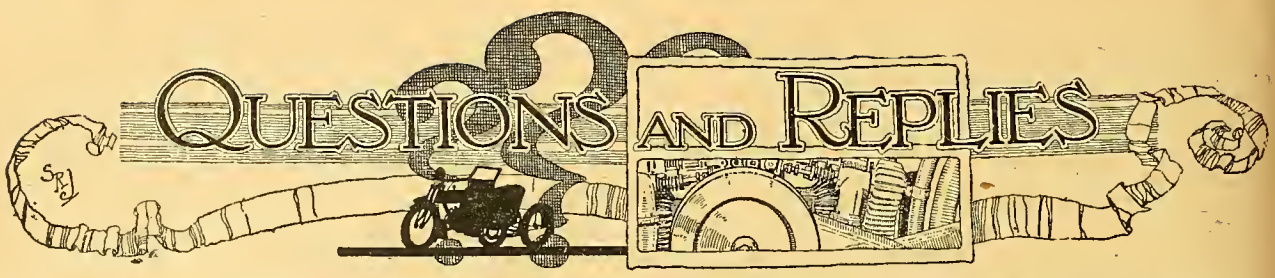
Personal luggage is the bulkiest item, and for this a compressed fibre suit case, 16 × 10in., which will hold a change of everything necessary, may be fitted on the carrier. Two long straps should be riveted to the underside of the case, in order to carry a trench-coat and overalls, also on the carrier (in the writer's case a camera was added as well).

Even on a machine that has fairly roomy pannier-bags, which accommodated most of the tools and small spares, a top-tube tool-box has been found to be a very great convenience for things one wants often and immediately, so a Clyno tool-box—a very substantial leather affair with a spring lock—has been fitted on the top of the tank by riveting the box to the upper edges of the knee-grips in place of the top pair of straps; the lower pair of straps, fastened under the tank in the usual way, then hold the lot securely.

A tin of oil is strapped to the off side board, and on the near side the spare belt, tube, and valve have been accommodated in the following manner:—

The footboard was removed, and a stout tin box, 5 × 7 × 8in. (which once held dry batteries), was slipped over the end, the two bolts securing the footboard to its clip passing through two holes drilled in the underside of the box. The footboard was then replaced and the clip tightened up, holding the box in position.

A. A. D.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of 'The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### STARTING AN OLD TYPE B.S.A.

Having recently bought a 1919 4¼ h.p. B.S.A. motor cycle, I find it is in very good condition and runs well when started, but is very difficult to start from cold. On using the starter either nothing happens at all, or else there is a back-fire, raising me into the air on the pedal, while petrol is blown back through the carburetter. Does this mean that the timing is far advanced, and that the exhaust valve lifter should be dropped later?—W.J.P.

It would appear that you are attempting to start with your ignition too far advanced. Retard the lever to about half-advanced position and try again; the best position will only be found by experiment. Of course, this particular model is not so easy to start as the later ones, and requires a certain amount of knack. An injection of petrol in the cylinder is almost essential, and on no account should a thick oil be used in the gear box, otherwise the clutch plates will be gummed and make the movement of the starter pedal almost impossible.

### TIMING AN OLD SINGLE.

How does one time a De Dion motor cycle? It is fitted with a Bosch magneto, which has only been overhauled a fortnight ago, and is in fine order, giving a good spark. There is one valve to be seen, and the carburetter is a B. and B. I have tried all ways, but no such thing as a start have I had. The engine was running a few weeks before I bought it, but not very well, owing to the magneto needing attention.—A.D.

The details supplied are not sufficiently complete to enable any definite opinion to be passed as to why the engine will not fire. Assuming, however, that everything is in good order mechanically, it can only be that the timing is at fault. As this engine has an automatic inlet valve, this may be ignored, provided that it is working correctly, which can easily be verified by direct observation. The exhaust valve should be timed so that it closes as the piston reaches top dead centre, its point of opening being assumed to be more or less correct provided it closes as stated. The spark should take place when the piston is on top dead centre of the compression stroke with the ignition control two-thirds retarded.

## Important Dates.

**Sat., Feb. 25th, to Sunday, Mar. 5th—Brussels Motor Cycle Show.**
**Sat., Mar. 4th—Inter-Varsity Hill-climb.**
**Sun., Mar. 5th—Argenteuil Hill-climb (France).**
**Mon., Mar. 6th—La Turbie Hill-climb (Nice).**
**Wed., Mar. 15th—A.C.U. One-day Trial for Stock Machines.**
**Sat., Mar. 18th—Victory Cup Trial.**
**Sat., Mar. 25th—East Midland Centre A.C.U. Open Reliability Trial.**
**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Sat., April 1st—Western Centre A.C.U.—Open Reliability Trial.**
**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**
**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs. June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Fri., June 23rd, and Sat., June 24th—Irish twenty-four hour Open Reliability Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**

### CONSUMPTION, OILING, TYRE SIZES.

(1.) How many miles per gallon ought one to get out of a 3½ h.p. Ariel with sidecar? (2.) Drip feed: how many drops per minute for speed of 20 m.p.h.? (3.) How does one ascertain whether wheel rims are 2¼ or 2⅜in.?—NOVICE.

(1.) 55 to 65 m.p.g. (2.) 30 to 40. (3.) These sizes are the same; 26×2⅜in. tyres fit 26×2¼in. rims.

### CHOKED PETROL SUPPLY.

I have a 1916 2¾ h.p. Douglas to which I have recently fitted a new Binks carburetter. This proved entirely satisfactory on first fitting, but after about three weeks' running I find that the following occurs:—On opening the throttle the engine immediately accelerates, as it should, but after about 20 yards the power falls off and speed drops slightly, very much as if one were breasting a rise. No amount of juggling with the air or throttle lever will remedy this. As far as I know the engine is in perfect order, except that the tappet clearance is rather large. Would this alone be sufficient to cause the above trouble?—R.W.P.

From your description the trouble appears to be connected in some way with a partial restriction of the petrol supply; make quite sure that petrol is reaching the float chamber freely. Examine the filter in the petrol tap and also the filter at the base of the jet chamber, and make quite sure that the petrol pipe and jets are clear, and also that there is no air lock in the petrol tank due to the filler cap being an airtight fit.

### AN UNWISE MOTOR CYCLIST.

One evening last week I went to my brother's garage and took the loan of a motor cycle, going a distance of about a quarter of a mile. As I was coming back a policeman stopped me and stated that the engine was making too much noise (it had a long exhaust pipe). Has the law anything to do with this; also what has it to do with licences? The machine had no licence nor any number and although we had a trade licence it was not affixed at the time. Can we ride a new cycle with any numbers?—A.J.

No machine may be ridden on the public roads without being either licensed privately or without carrying trade registration numbers. The law also requires that a machine shall be reasonably silenced by having the exhaust gases passed through an expansion chamber or "other device" suitable for the purpose. It would appear that you were summoned for riding an unregistered machine, and also for riding a machine to which no silencer had been fitted, and you do not appear to have an satisfactory defence in either case.

### CRACKED CYLINDERS.

Please give me some advice regarding a 1910 5-6 h.p. Minerva which I purchased. The trouble is that the cylinders keep cracking between the valve caps, where the bridge is very narrow. I have had them welded three times; is this a common fault with that design of cylinder?—J.A.

The trouble you describe is one of frequent occurrence in certain old-type engines, and we doubt whether it can be overcome by welding.

### EFFORT WITHOUT WORK.

If a pedal bicycle can be made much easier to drive by a light flywheel carried conveniently, why should not the same idea be adapted to light-weight motor cycles in order to allow of less powerful engines being fitted?—J.F.S.

There is no value whatever in the method of using a flywheel as you suggest; a study of any elementary text-book on mechanics will make it quite clear that into all mechanisms more energy has to be applied than is given out again in useful work.

### A CURIOUS CASE.

Some month or so ago I purchased a torpedo model sidecar to attach to my Harley-Davidson motor cycle. I have recently been stopped by the local police superintendent (who doubtless finds great difficulty in finding enough trouble to warrant the expense of keeping himself and his satellites) with a warning that if I do not remove the letters R.34, which are painted on the sidecar, I shall be summoned for displaying two numbers. The numbers are painted in white on the nose of the sidecar, which is coloured grey to match the machine. I should be obliged if you would let me know whether it is necessary for me to spoil the finish of the sidecar, or whether I am within the law, especially as I do not feel inclined to spoil the model for a mere whim of an official.—R. S.

So far as we know, such a case as you describe has never arisen before; but we think it is quite likely that the police officer concerned could make matters troublesome for you if in any way the numbers painted on your sidecar tend to cause confusion with the registration numbers on the machine. Instead of painting them out altogether, however, we would suggest that you paint them over with a darker shade of grey than the prevailing colour of the sidecar. If you do this there should be no possibility of them being taken as registration numbers, since the law requires that these shall be painted in white on a black background. In a sense, we think there is some slight justification for the objection, as such numbers undoubtedly do cause some confusion, and the exhibition of any large and prominent figures on private machines, apart from those required by law, does not serve any useful purpose. The London motor 'buses, of course, carry their type letters and serial numbers on plates identical with registration plates. You might cite this as a precedent.

AIRMEN IN THE MUMMER'S ROLE. The Royal Aircraft Establishment Amateur Dramatic and Operatic Society are evidently alive to the value of originality in advertising. The illustration depicts two members touring the streets of Farnborough with a Sunbeam sidecar, attired in Mid-Victorian dress, exhibiting a poster advertising the play "Trelawny of the Wells."

### A 2 H.P. LIGHTWEIGHT.

I have a 1914 O.K. machine fitted with a 2 h.p. N.S.U. engine. It has a mechanical overhead inlet valve. (1.) How does one time inlet and exhaust valves and also ignition? (2.) What size jet is suitable for this machine (Amac carburetter)?—J.F.

(1.) Time the valves so that the exhaust is just closing and the inlet just commencing to open when the piston is on top dead centre; the ignition should be timed so that the contact breaker points are just commencing to separate with the piston on top dead centre of compression stroke and the magneto control two-thirds retarded. (2.) Size 24 to 26 should give the best all-round results.

### MODIFIED GEAR RATIO FOR TRANSMISSION CONVERSION.

I am converting a motor cycle from chain-cum-belt to all-chain drive, and I want to know what number of teeth I require on the driving sprocket of back wheel. The engine is a 1920 6 h.p. J.A.P., and the engine shaft sprocket has 14 teeth, while the Sturmey-Archer gear box has a 30-teeth clutch sprocket and a 17-teeth sprocket driving to the back wheel. The present belt rim on the back wheel is 19in. diameter (pulley on gear box being 8in. diameter).—T.T.

The present gear ratio with chain and belt drive is approximately 5 to 1. On account of the increased rigidity of the all-chain drive we would recommend that you have a slightly lower top gear, and a 42-teeth sprocket on the back wheel will give you 5.3 to 1, which should be satisfactory.

### AIR LEAKS OR MAGNETO FAULTS?

My 6 h.p. J.A.P. engine has lately developed one or two little idiosyncracies. In the first place there is constant firing in the exhaust pipe from the front cylinder—I have fitted a new valve, but this has not cured it. Secondly, the magneto (Splitdorf) has a habit of missing, and at slow speeds the engine only fires on one cylinder. I think myself that the breaker points in the magneto are too wide, but would like your opinion before making any alterations.—Rex.

From the symptoms you describe we should expect the trouble to be due either to a weak valve spring, a valve sticking in the guide, or to air leaks in the induction system. However, as you have apparently tested these points, the trouble may be due to the magneto. Examine the action of the contact breaker carefully and see that the points separate to an equal distance for each cylinder; also examine the high-tension brushes and their holders, and clean the slip ring with a piece of petrol-soaked rag inserted through one of the brush holes. If all these points are in order, return the magneto to the British depot of the makers for examination and report.

FRENCH TWO-STROKE WITH WELDLESS FRAME.

Great strength is claimed for the riveted channel steel frame of the 2½ h.p. (245c.c.) Train-engined Rasser two-stroke, a new French lightweight made by M. Rasser, 31, Rue Jean-Jaurès, Houilles (S. et O.), France.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"S.C.C." (Southall).—8 h.p. Matchless sidecar: Spring and rapid frame models, comparisons.

"R.W.F." (Cork).—Dunelt sidecar outfit: Heavy passengers, rough roads, and fairly hilly district.

"G.A." (Preston).—A.J.S. standard sports model.

"T.L.O." (London, W.).—Carburetter to give easy starting, slow running, and good consumption on 3 h.p. Ivy.

"NAVY" (Paisley).—4½ h.p. Quadrant with sidecar.

"C.M.C." (Whittlesey).—Family model Morgan: General experiences and advisability of four-speed gear.

"R.W.F." (Croydon).—4 h.p. Douglas and 3¾ h.p. Scott: General comparisons as sidecar machines.

"B.W.W." (Wellington). — 2¾ h.p. Raleigh: General experiences, two-speed model.

"ENQUIRER" (Banbury).—2¾ h.p. 1921 Cedos with sidecar.

"C.T.F." (London, N.13). — 2¾ h.p. Massey-Arran-Jap: Brooklands sports model; speed, climbing, slow running, maintenance of time.

"H.W.W." (Oldham).—8 h.p. Brough Superior sc., 8 h.p. Royal Ruby sidecar, 8 h.p. Matchless sc.; and N.U.T.

"J.R.K." (Sutton).—4½ h.p. Quadrant sidecar: Opinions as to long wearing qualities under heavy load.

"W.D.W." (London, N.1.)—Four-cylinder Henderson: General experiences.

"A.O.R." (Warrington).—3½ h.p. T.T. Norton with Philipson pulley and medium-weight sidecar: Life of pulley; ease of starting.

"G.H.H." (Macclesfield).—4½ h.p. Humber: Consumption; detachable valve pockets, speed, and climbing.

"J.C.B." (Birmingham).—2¾ h.p. A.J.S. (semi-sporting): Speed; consumption; climbing.

"F.A." (Stevenage).—4½ h.p. Beardmore-Precision: General remarks.

"R.J.T." (London, N.W.6).—3 h.p. A.B.C. Reliability and speed of standard model.

"J.C." (Mansfield).—3½ h.p. Douglas sports model: Comfort, reliability, consumption.

"K.T.C." (Norwich).—7 h.p. A.J.S. and two-seater sidecar: Consumption and speed with standard Amac, also with variable jet; ditto with Binks carburetter.

"W.J.B." (London, W.1).—Wattalite lighting set.

"H.C." (Cleckheaton).—Four-cylinder Henderson and two-seater sidecar: Power, petrol, and oil consumption.

"C.G.P." (Haywards Heath).—2¾ h.p. Raleigh: Consumption, etc. Will it pull light sidecar?

"C.A.R." (St. Helen's).—5-7 h.p. Coventry-Victor, solo or sidecar: Speed, consumption, finish.

"J.B.Y." (Helensburgh). — Atmos or Binks carburetter on 3½ h.p. N.U.T.

"A.E.S." (Bradford). — Scott Sociable: Speed, economy, and upkeep.

## READERS' REPLIES.

### DIFFICULTIES WITH A TWO-STROKE.

Reading "H.L.L.'s" complaints, it brought back to my mind an exactly similar trouble that I suffered from last year, my machine also being a 1920 Villiers two-stroke, C.A.V magneto, but with B. and B. carburetter. I traced the fault eventually, not to weak mixture, but to a badly worn magneto chain, three of the links of which measured 1¾in. Every time this part of the chain passed the sprockets it had the effect of greatly retarding the spark, causing the popping back through the mixture being ignited much too late, I suppose. Immediately a new chain was fitted the trouble vanished, and I beg to suggest that future enquirers be advised to examine the condition of their magneto chains, as well as the petrol supply and induction system. The drop in "H.L.L's" consumption would seem to indicate the same trouble, as he is apparently unable to give the engine full air.—C. W. FORDHAM.

The solution of "H.L.L.'s" trouble is this. The gudgeon pin of the Villiers engine has an oil hole drilled in it, and it has been put back incorrectly, *i.e.*, the oil hole facing up to the piston instead of facing downwards towards the connecting rod, and as the latter rod is cut out at the top when the piston descends the charge in the crank case blows back over the top of the gudgeon pin through the oil hole and out through the carburetter, which causes all the trouble the machine is suffering from.—SIDNEY T. CADGE.

The back-firing and erratic running of which your querist "H.L.L." complains in the current issue may easily be due to his faulty drip feed. He does not say what is actually wrong, but if air leaks through here (*e.g.*, *via* a broken glass) the mixture in the crank case will be hopelessly upset. So long as his petroil system proves satisfactory, the delivery tube from the drip feed should be removed and the crank case union securely sealed up.—CHITTY-BANG-BANG.

For three years I had the same or similar trouble to "H.L.L." At long last we found the float needle valve cone had not been attached to the needle in dead centre. I got a new needle valve from Amac, Ltd., and my machine took a test hill at 30 m.p.h. on which it had stopped before.—L. Y.

### MOTOR CYCLES AND NERVES.

It appears to me to be a fallacy on the part of many that motor cycling is prejudicial to nerves. Having had a practical experience in this particular phase, I should like your correspondent "H.S." to know that only as a result of taking up motor cycling have I recovered from "nerves" to such an extent that I now fear nothing, and can drive or take on any job that requires nerve energy, although the bogey mentioned by your correspondent was used in my case by those who did not know the benefit to be obtained by the motor cycle and sidecar. I agree that solo work is much more likely to be trying than sidecar driving. Especially is this so under wet or greasy conditions, but I do both.—SIDNEY R. GIDDINGS.

### Change of Address.

More commodious premises at 78, Bishopsgate, London, E.C. have been taken over by the Bancroftian Co.

### Tanks and Silencers.

As sole selling agents for the Coombe Manufacturing Co., Ltd., of Coventry, the firm of Green and Wheatcroft, 83, Murray Road, Rugby, are able to quote for all kinds of motor cycle tanks and silencers.

### Spare Parts Reduction.

During February the prices of Indian spare parts were reduced 20%, excepting such items as carburetters, magnetos, electrical equipment, and sidecars, the manufacture of which is not controlled by the Hendee Manufacturing Co.

### In Ireland.

Readers and agents across the Irish Sea who are interested in the Dunelt machine should note that a representative of Dunford and Elliott, Ltd., Bath Row, Birmingham, is making a business tour and giving demonstrations in Ireland.

### Found on the Road.

A motor cyclist who fell from a Triumph at Bromley Hill, S.E., on February 19th, left behind him a pair of aero Triplex goggles; these were rescued by Mr. M. B. Lee, 1, Gresham Buildings, Basinghall Street, London, E.C.2.

### The "Big Four."

Registration of a trade mark design in which the phrase "Big Four" is an essential device has been obtained by Norton Motors, Ltd., of Birmingham. The firm claim to have originated this designation for 4 h.p. machines of the big single type.

### Glass's Automobile Show of Used Motor Vehicles.

Second-hand motor cycles will be a feature of Glass's Automobile Show, to be held at the Crystal Palace from March 27th to April 8th. On Saturday, March 18th, there will be a hill test of machines entered for the show, under A.C.U. supervision. The organiser is Mr. W. Glass, 12, Buckingham Street, Strand, London, W.C.2.

### Cost of Carriage.

Some machines are now quoted at "carriage paid" prices, but a section of the manufacturing trade considers that machines should be quoted "at works," so that the man near by or who collects the machine personally shall not pay an overhead charge based on the average cost of carriage. Amongst the latter category are the makers of Abingdon, Beardmore, Excelsior, Connaught, Bradbury, Brough-Superior, Calthorpe, Chater-Lea, Douglas, Enfield, Omega, Hawker, Quadrant, P and M., and Verus motor cycles and Millford sidecars.

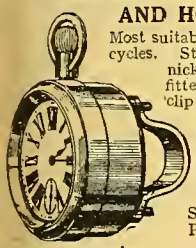
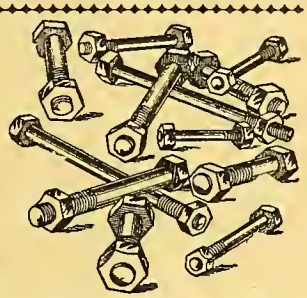
## BARGAINS FOR MOTOR CYCLISTS

### HANDLEBAR WATCHES AND HOLDERS



Most suitable for motor cycles. Strongly made, nickel finish and fitted with spring clip inside case to absorb vibration. Complete with good reliable watch. Usual price 12/6. SALE PRICE **5/3**

Post 6d.



### NUTS AND BOLTS

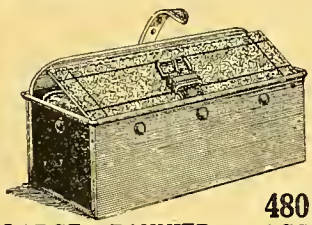
1 doz. assorted sizes, ¾" to 2½" Engineers' Bolts and Nuts. Indispensable to every outfit. Usual price 3/9 doz. SALE PRICE, per doz. **1/-** In gross lots **11/9**. Post free.

### 275 STRONG MOTOR CYCLE BRASS OILERS

Nickel plated. *Will not leak.* Curved spout. Usual price 2/9. SALE PRICE **1/9** Postage 4d.

### BULB HORN

Deep note, treble twist, large bulb. Usual Price 8/6. SALE PRICE **4/11** Post 9d.

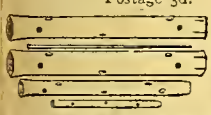


### 480 LARGE PANNIER BAGS

Armoured. With fibre lining and leather front. Fitted with straps and clips complete. Usual price 8/6 Post 9d. SALE PRICE **4/11**

### CELLULOID FACE SHIELDS

The most popular protector on the market. Very light and compact. Bound Chenille. Usual price 2/9. SALE PRICE **1/-** Postage 3d.



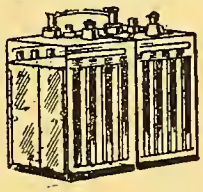
**760 SETS MOTOR-CYCLE SIZE**

### BOX SPANNERS

Giving 6 useful standard sizes. Complete with tommy bar. Usual price 2/9. Post 4d. SALE PRICE **1/2½**

### Further Reductions in ACCUMULATORS.

Best English made. Strong Celluloid cases. Stout plates of the best quality.



NOTE. Accumulators cannot be sent charged.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

**ADVERTISEMENTS** in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

## NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

**In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.**

## ☞ DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way. The seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

## SPECIAL NOTE.

**Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.**

## Motor Cycles Overseas.

FOR many years this journal has advocated attention to overseas trade, a matter to which many of our manufacturers are now giving their serious attention. In the past, perhaps, the demand for motor cycles from riders in this country has, in certain cases, caused makers to relegate the question of overseas trade to a minor position in their annual programme.

Only by close study of conditions and careful arrangements for adequate service can we hope to make headway against world competition. The merits of a machine are sometimes negatived, as far as the overseas rider is concerned, by the difficulty of obtaining spares in a reasonable time. It is, therefore, a matter of considerable satisfaction that a few of our leading manufacturers have recently carried out or decided to make personal tours abroad with a view to obtaining first-hand experience of benefit to their firms.

Such a go-ahead policy is bound to bring its own reward, and we know that much valuable information has already been obtained. Our frequently expressed opinion of the soundness of many British machines for all kinds of hard work has received additional confirmation, but it must be realised that certain conditions uncommon, or even non-existent, in this country necessitate modifications which are vital to the interests of riders in other countries.

It is to be hoped that even when trade becomes normal once again all manufacturers will recognise the value of the overseas markets. Just now the Board of Trade returns are not excessively high, but a statement not without significance to those who aver that no real overseas demand exists is that no less than 38.4 per cent. of the British exports of motor cycles during January were the product of one important firm.

Now that a beginning has been made in the right direction we may hope for further developments, and in the course of a few months, when results become apparent, our export trade should show a material increase.

## Confusing Classification.

A NUMBER of manufacturers are, perhaps unconsciously, confusing the general public by the manner in which they classify their various models. It cannot be expected that the man in the street is able to distinguish between, say, the Y.158 pattern and the C.H.Z., or the Mark VII. against the Mark XX. Surely it is far more reasonable to classify machines as the Touring model, the Sports model, Stripped Sports model, Standard Sidecar model, or the Sidecar Outfit de Luxe! These methods of classification would certainly be far more easy to remember than a conglomeration of figures, Roman or Arabic, and letters or marks.

It would be a distinct asset if the manufacturer could classify his products in so simple a manner that the motor cyclist could carry the range of models in his mind with the greatest possible ease. No motor cyclist can be expected to memorise all the various symbols if they are complicated or unfamiliar in their application. Initials are well enough in their way if they have a clear meaning, such as T.T., which very few fail to remember means Tourist Trophy, but when the letters are absolutely meaningless they only serve to confuse, and are of use merely to the manufacturer and, perhaps, his agents. This may seem a small matter to the manufacturer, but if it aids the motor cyclist to identify his models easily, both parties should benefit. Needless to say, if further differentiation is required the model should be prefixed by the date of manufacture.

An Index to the advertisements in this issue will be found on the page facing the back cover.

## Tool for O.H.V.

NOTICING my wails about the job of manipulating the springs of overhead valves (it requires the dexterity of a conjurer, the beef of a Hackenschmidt, and the horny thumb of a navvy), a colleague on *The Autocar* staff showed me a charming little gadget patented and made for the special benefit of A.B.C. cars by Mr. C. J. Rogers, of Old Malton, Yorks. It consists of two parts. Item 1 closely resembles the valve spring clip supplied for years past with the side-valve Triumph engine. Turning the engine till the valve under treatment is fully open, you slip this clip bodily over the valve spring and its two capwashers; the engine is then turned till the rocker clears the valve stem, when the clipped spring flops loose on the valve stem, and the cotter can be tweaked out. Item 2 is a neat spring compressor, to be used in fitting a new spring. It consists merely of a cheese-headed bolt—its head drilled to take a tommy—with a wingnut on the threaded end. You thread it through the new valve spring, complete with its two capwashers, and screw it up till the spring can be inserted in the special clip (item 1, above). This has a vice and three bits of string beat to a frazzle. Why doesn't Mr. Rogers market it to suit all popular o.h.v. engines?

## Tut, Tut.

A READER signing himself "J. H. W." writes concerning speedometers and things. "J. H.W." is some lad. For him the road to ruin commenced with the purchase of a Norton—from internal evidence in his letter one imagines that it was a B.S. model. He next fitted a speedometer, and sallied forth at sunrise to discover "what she could do." After about a quarter of a mile all out, the speedometer needle was successfully whacked up to the 80 m.p.h. point. With eyes no doubt starting from his head, "J. H. W." "proceeded," as we used to say in the Army. Anon the needle remorselessly advanced to a full inch beyond the "80." Just as "J. H. W." framed rosy mental visions of Ebblewhite's dismay at the next B.M.C.R.C. meet, the speedometer suddenly repented and hastened back to zero. The pull-up safely accomplished without a wobble, "J. H. W." dismounted to readjust the drive bracket. Not a bit of it. It was the works inside the instrument which had given the Norton best. Back went the speedometer to the factory. They repaired it, and "J. H. W." tried another burst. Same result. This time the factory sent him a brand new instrument. Same result. So he now enquires whether there is any speedometer which can stand the push of a Norton. Being fundamentally a coward, I leave such gaits to people whose lives are worthless, and submit the query to a reckless public in lieu of tackling it myself.

## History Repeats Itself?

I RECENTLY provoked readers to confess their intimate experiences with various slow-speed mechanical oil pumps, and sustained a regular barrage of testimony, the whole of which redounded to the credit of the pumps concerned. One manufacturer admitted spontaneously that he had asked some of his customers to write to me, as any Sherlock Holmes could have guessed from the general tenor of the letters. But many users wrote to me quite spontaneously, and the nett effect of all the evidence is to make me expect a repetition of a previous incident in the lubrication of motor cycle engines. Readers will remember that until a few years ago the ordinary hand pump was our standard lubrication. Then a couple of accessory makers introduced the drip feed. For a time it struggled for existence as an accessory, welcomed by many keen owners, but suspected and cold-shouldered by the trade. Finally it made good, and to-day it is probably the most popular method of lubrication we possess.

At the moment such pumps as the Best & Lloyd, the Showell, and the Lamplugh are in much the same position as the drip feed occupied for a year or so after its introduction. But there are clear signs that these pumps threaten to oust the drip feed and the single-charge hand pump. For example, the Best & Lloyd pump has already been officially adopted by two such famous motor cycles as the B.S.A. and P. & M., to say nothing of such a cycle car as the G.N. In every case the writers express surprise that motor cycle designers continue to despise American practice, and cling so tenaciously to the hand pump, with or without a drip feed. They all expatiate on the relief from perpetual ransacking of their memories as to how many miles have elapsed since they last injected a charge, and especially so at night when a drip is normally invisible. One of them recommends all manufacturers to mount the oil pipe behind the cylinder. This change would usually shift the oil compartment from the front to the rear of the tank, and keep the oil from solidifying in cold weather.

Occasional Comments.—

## Preparing to Overtake.

SOME unknown reader and myself must swap mutual apologies—if we had both been killed, the correct verdict would have been manslaughter against each of us. The road was about 14ft. wide and dead straight. Just ahead of me was a cart, proceeding in the same direction as myself. I peered ahead—I say "peered," for the atmosphere was suggestive of the scene in "The Kid," where the angels pluck each other's feathers in a slum duel, and the driving sleet made exact vision difficult. The road appeared to be clear, and I went ahead to pass the cart. Just as I entered the gap between the cart and the road edge, up dashed somebody on an Indian sidecar from the opposite direction. A hectic moment, and the situation resolved itself safely. Mine the blame for not spotting him, despite the snow; and his the blame for failing to approach an obstacle on his proper side of the road.

## Out of the Mouths of Babes.

MY small son—aged three—has already begun to follow in father's footsteps. When knowledge fails to carry him any further, he speculates boldly. The advertisement columns of *The Motor Cycle* are his weekly joy, though he sometimes trips technically The other day one of our advertisers pictured a telephone receiver on his page. Junissimus had never seen a telephone, but like his papa he was not going to be beaten by a little thing like that. "You pushes down *that!*" he explained, pointing to the mouthpiece; "and the oil comes out *there*," pointing to the earpiece. Similarly with a mammoth sketch of a K.L.G. plug. "You pull down *that*," indicating the terminal clip, "and the bang comes out *there!*" pointing to the electrodes. The Editor has engaged him to undertake this column when I fill my tank for the last time.

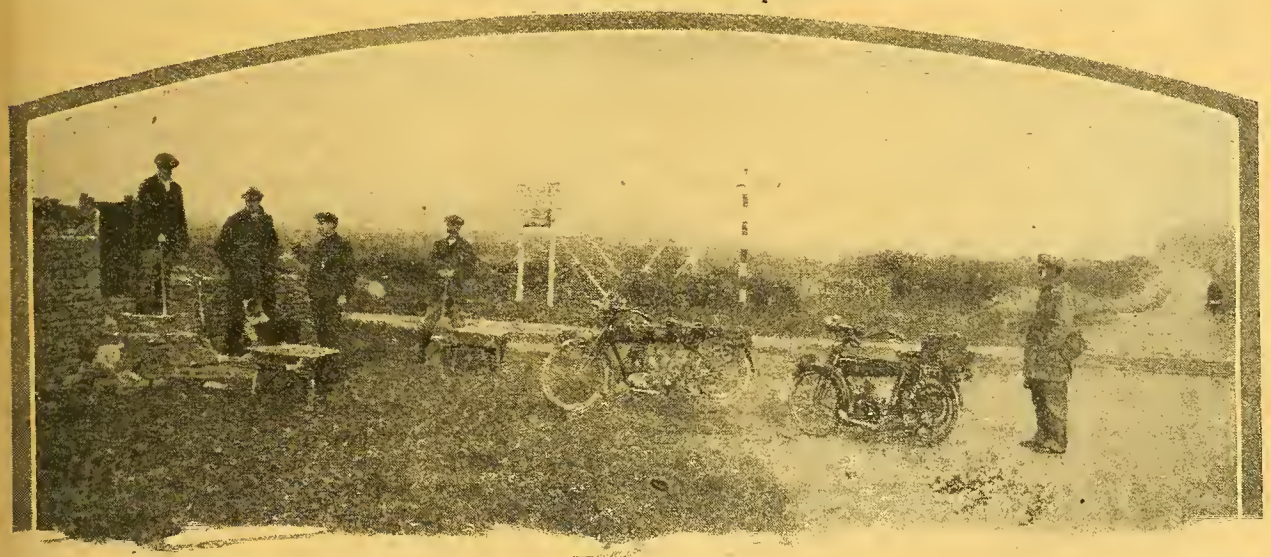
## Not the Only One.

MR. H. W. MORETON, of 59, Wood Street, Woolwich, has proved to me that the idea of using a dry battery in conjunction with a gas head lamp is less new than I fancied. Two years ago he marketed his "Aladdin" auxiliary head lamp. It is a well-made affair with aluminium body, about 3in. long, and is designed to bolt on to the top of the gas head lamp. The flex is thus removed from the heat of the acetylene flame, and from any risk of chafing which might arise from the wires being passed through the shell of the main lamp. This device is a useful alternative to the Siemens fitting which I described the other week. Its weight and cost are alike negligible. With a slight alteration in the mounting, it might easily be utilised as an inspection lamp for night repairs. At present it is rigidly mounted by means of a half-inch steel pillar pushed through a hole drilled in the top of the headlamp, and secured by a couple of nuts.

Mr. Moreton agrees with me that M.S.C. bulbs deserve more attention from firms catering for motor cyclists. But he adds that a good many commercial M.S.C. lamps take half an ampere, and that it is well to buy cannily, for a first-class example need not take more than a tenth of an ampere.

## Back to Inclined Engines?

I WONDER if our modern penchant for o.h.v. single cylinders will lead to a revival of the forwardly inclined engine. The history of the P. & M. and other machines shows that there is no serious technical obstacle to the practice, and its advantages are clear. It would give the designer an extra inch or two to play with in the layout of his valve rocker gear, facilitate the removal of the head for decarbonisation purposes, and improve access to the sparking plug. There would, of course, be no need for the engine to be used as a member of the frame.



A DANGEROUS CORNER BEING ELIMINATED. An improvement that has long been due is taking place at the junction of the London—Stratford-on-Avon and Banbury—Chipping Norton roads. Several serious accidents have taken place at this spot, and the removal of the building and the antique Chapel House steps will be appreciated by motor cyclists. A Sunbeam and Enfield are shown in the foreground

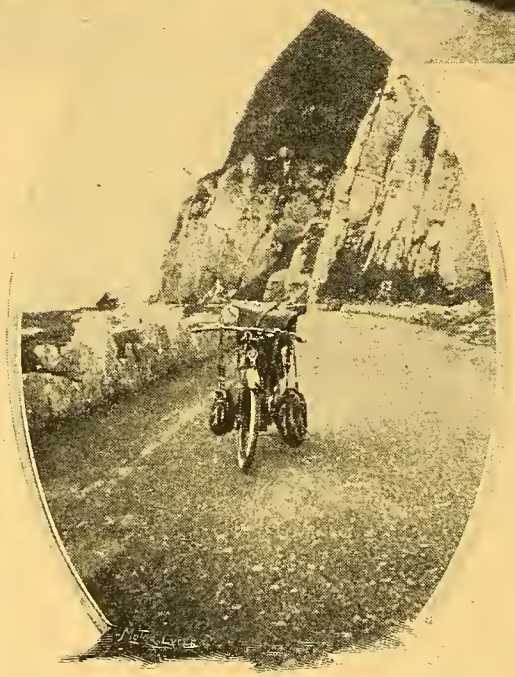
# Through Ireland on a Motor Cycle

Under Strange Conditions for the British Isles, the Writer describes an Irish Business Tour.

NOW that there seems some hope for an ultimate settlement of the Irish question it is possible to look back on a sojourn in Ireland during the truce period with a better perspective.

After the hostilities had happily abated I started out from Birmingham on a round of business calls which covered almost the whole of Ireland. My machine was a $2\frac{3}{4}$ h.p. Sirrah, and it was shipped at Fleetwood (for Belfast) without trouble, other than that the tool bags were searched for arms or ammunition.

During the crossing the sea was rough enough to make me feel quite uncomfortable, and on the following day, when I went on deck at 6 a.m. in the pouring rain, as we were steaming in, Belfast looked a very miserable place at first sight.



(Top) A bridge partly demolished near Maghera, leaving just sufficient roadway to push a machine across. (Bottom) On the wild Antrim coast road near Glenarm.

On acquaintance, however, it seemed pretty much the same as any English city, except for the curfew at 10.30 p.m. and the armoured cars, most of which were Crossleys. The first thing I had to do was to get a driving permit, which is very much like a passport. It required a photograph and description of the driver; also a full description of the machine. After putting in my application I had to wait several days for it to come through.

### Ulster's Interest in Speed Events.

My first trip commenced when I left Belfast for Portrush for the week-end; the road was very rough in parts. The people in Ulster were found to be most keen on motor cycles, and specially interested in speed.

On the following Monday I left Portrush by Coleraine, Limavady, and Dungiven, then over the Glenshane Pass to Maghera; in the Pass there were two bridges blown up, and it took me a long time to cross the rivers. These were the only destroyed bridges I saw in Ulster.

Next day I went to Larne by the Antrim coast road, surely the best in all Ireland, right by the sea all the way. The people in Ballymena are exceptionally keen on racing, and I saw some very fast machines there.

Business being completed in Ulster, Belfast was left by Lisburn and Armagh (the former was partly destroyed by fire), and then to Monaghan, where I first found trenches across the road. As a rule, it was just possible to push the machine round them, but sometimes I had to go through the fields.

Many of the cycle people on whom I had to call were in the I.R.A., and, although I am English, treated me very well, and in many cases went out of their way to help me.

The next week-end was spent at Black Rock, which is a few miles from Dundalk; it appeared to be a very miserable place. Many of the towns through which I passed were flying the Sinn Fein flag, and trenches were still fairly frequent. After going through Kells, Trim, and Navan, Dublin was reached.

### Dublin.

There were not many motor cycles to be seen on the roads, but two-strokes were more popular than in Ulster. The restrictions, however, had killed the demand for motor cycles for the time being.

After Dublin it rained heavily nearly every day, and the roads gradually got worse, but the Sirrah still ran very well. I followed a good road to Carlow, which I left for Kilkenny and Callan. Near there I saw the funeral of a Sinn Feiner—a man in the I.R.A. A long procession of men in uniform and nurses followed, and the road was blocked for two hours by the crowds.

Between Clonmel and Mitchelstown there was the heaviest rain I have ever seen. Also, two bridges were

blown up, and I had much difficulty in getting the machine over what was left of them.

From Mitchelstown to Fermoy a big military camp caused a delay while my papers were examined. I had intended to go from Mallow to Limerick, but missed my way and got absolutely lost in the hills round Kanturk and Newmarket. I finished up at Newcastle West; the next day a man took me on a fishing boat across the Shannon from Foynes to Killadysert, for which he charged 10s.

### Trenches and Mud.

The roads in County Clare were terrible—it is impossible to describe them, as they have not been touched for years. There were trenches about 3ft. deep by 4ft. broad across them every few hundred yards, and all the road was about six inches deep in mud. I was just able to crawl along in bottom gear at about 10 m.p.h. How the machine stood it I do not know. In a garage near Kilrush there were several well-known machines with broken frames. Throughout this district there was great difficulty in getting petrol, as garages are very few and far between, and all charged at a different rate. However, my luck held fairly well, and I was not stranded.

Beyond Kilkee the roads were most terrible, and at one point, coming down a hill, I suddenly saw a trench at the bottom. Violently applying the brake, the rod broke, and the machine and I fell right into the trench. I had a very lucky escape, being quite unhurt, and nothing was seriously damaged.

Trade in motor cycles was at an absolute standstill in County Clare, and even pedal cycles were not allowed on the road before the truce.

Black Head, near Ballyvaughan.

I next went to Galway by Ballyvaughan and round the coast by Black Head, where the scenery was most wild and wonderful. There were very few signposts, and the men in the R.I.C. were most kind in telling me which roads to take and where they were trenched, and bridges blown down. Galway, I found, looked almost the same as any English city, and there was very little damage done.

Mallaranny was the farthest north-west I went. The country round Westport was very wild, and motor traffic was limited to an occasional Ford. Many of the telegraph wires were cut in this district.

Turning south again to Limerick by Athenry and Ennis, the roads again became very bad. Limerick struck me as being a very depressing city. I went on to Killaloe, then along a road by Lough Derg, where there is a wonderful view of the country around.

All this time my machine gave little or no trouble, except punctures, which were not to be wondered at, taking the terrible surface into consideration. In fact, I used up all my patches, and had to wait two days to get some more at Mallaranny. The magneto was very good but by no means waterproof, and I had a little trouble in keeping it dry.

After Mallaranny I got into the Midlands, which is flat country, where the roads are mostly bordered by peat bogs; Athlone, my next place of call, proved a very bright town, and the roads were generally good.

### Poor Visibility on the Mountains.

From Athlone to Cork the road by Maryborough, Durrow, Cashel, Cahir, to Clogheen was then taken over the Knockmealdown Mountains to Lismore. This was a very stiff climb on a rough surface, and at the top the clouds came down, so it was impossible to see more than a few feet ahead, and I had very narrow escapes where two bridges were down. On several occasions I felt very glad that I had got a lightweight machine, which I could pick up and carry over rivers. On coming down the Knockmealdown Mountains on the Lismore side it was steep and deep in mud, which made driving exceedingly difficult. I was more than glad to get to Lismore, and should not care to attempt that climb again. In the hotel at Lismore there were bullet marks in the rooms and all over the walls, caused when there was a raid on the police barracks some months before.

On the way to Cork several armoured cars were met, and by this time I knew that when one comes in sight the thing to do is to pull right into the edge of the road. On arriving

Remains of the bridge which was blown up between Dungiven and Maghera.

**Through Ireland on a Motor Cycle.—**

at Cork I was astounded to see the ruined condition of the city. Patrick Street was like the towns in Northern France and Belgium. Huts had been set up on the sites of large burnt out shops. Business was practically at a standstill.

After a ten weeks' tour I sailed on the s.s. *Classic* for Fishguard. The method of getting the machine shipped is not altogether satisfactory, although mine came to no harm.

I was looking forward to the good English roads again, but the one from Fishguard to Cardigan was as bad as some of the Irish ones; there can have been no reason for this.

Although my machine was only a lightweight—a two-stroke—and the cheapest of its kind made, it could not have been put through a more severe test, and, as I have said, it proved satisfactory in every way; even the belt drive functioned well under all conditions of mud and wet.

The Irish people in both north and south were, without exception, most friendly to me, and everyone hoped for a satisfactory and speedy end to hostilities, which hope has now been fulfilled. W.H.H.

# WHY AN ENGINE ACCELERATES.

## A Simple Explanation of What Occurs when the Throttle is Opened.

NOT long ago my friend "Ixion" put forward some interesting questions, and I saw that two correspondents endeavoured to elucidate the mystery, but neither of them appeared to do so with complete success.

"Ixion" said that a reader wanted to know why an engine accelerates when the throttle is opened, and what single factor produces the initial accelerations under the circumstances outlined.

He went on to explain that the engine should inhale as big a charge when the inlet valve is open for a long period with a small throttle opening as when the engine is turning over rapidly on full throttle.

### Induction.

This is, of course, true enough, for if the inlet valve is open for a sufficiently long time, the cylinder will be completely filled, even when the throttle opening is very small. But this is the *crux* of the whole matter—the inlet valve must be open long enough, or the cylinder will not be filled, and this obviously necessitates a considerable limitation of speed.

Another point is that when the passage of the air across the jet is very slow, only a very small quantity of petrol is drawn from that jet. That is why it is so often necessary to flood the carburetter and close the air when starting. This point, however, does not materially affect the main question, for the engine is assumed to be running at the time when the throttle is further opened and acceleration produced.

### An Explanation.

My view of the case is as follows: An engine is started after the carburetter has been flooded and the air closed. The air lever is then adjusted to a suitable position, unless the carburetter is entirely automatic, and the engine quickly settles down to a certain speed which is governed by the position of the throttle. If it ran more slowly at this throttle opening, it would have time to take in more gas, and this would, with the same load, immediately tend to an increase of speed. If it ran faster, less gas would pass the throttle, it being understood that it is only partly open; the power would be less and the speed would diminish. It will therefore be seen that for a certain throttle position and load there must be a certain definite speed, which may of course vary slightly from day to day, according to the quality of the fuel and the tune of the engine.

We will now suppose the throttle to be opened, not necessarily all the way, but opened a little wider. As the speed of the engine has not yet increased, a larger charge, proportional to the increased opening of the throttle, will be drawn into the engine, and the next explosion will have more power, so also will the succeeding ones, and the speed will quickly increase until the conditions again balance each other, and the amount of gas taken into the cylinder on each induction stroke will be rather less than the first charge after the throttle was opened more widely. This, I think, answers the first two questions.

The third is "Why does a weak mixture make an engine knock?" The answer given by a correspondent is that a weak mixture burns more slowly than a correct one, and, consequently, there is still some burning gas in the cylinder while the next charge is being inhaled, and this causes a state of pre-ignition. It seems to me that such a state of things would cause a blow-back through the carburetter but not a knock, and I fancy that this question is like the ancient query, "Why does mistletoe generally grow on an oak tree?" The answer is "It does not."

### Knocking.

It is quite true that enriching the mixture will often stop knocking, but this, I take it, is a case of the correct mixture causing knocking because some condition is momentarily unfavourable, and this knocking being stopped by a slower burning mixture. Retarding the spark will also stop knocking when it is caused by the speed being too slow for the ignition timing; but if the cause is pre-ignition owing to something inside the cylinder head being heated till it becomes incandescent—the sparking plug point, for instance—then retarding the spark will have no effect because the explosion is taking place before the spark occurs.

### Atmospheric Pressure.

A correspondent says that he can understand more water running through a sluice when it is opened because of the pressure of the water behind, but he thinks that there is no pressure behind the throttle slide. Here he is wrong; there is the pressure of the atmosphere (roughly about 15 lb. to the square inch) behind it, and that, and nothing else, causes the air to flow into the cylinder, picking up petrol and mixing with it during its passage through the carburetter. AURIGA.

# Through Feminine Goggles

## A few Do's, Don'ts and Inconsequences.

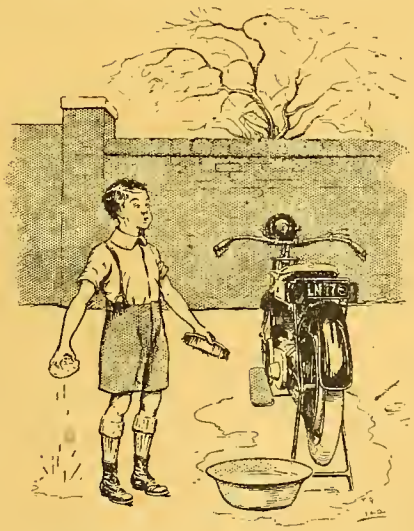
WHAT are we women going to do with 1922? In motor cycling, as in everything else, we cannot stand still. We must either go forward or go back. Since the war, when our sex proved themselves capable of driving cars and motor cycles with skill and intelligence, there has been a tremendous stimulation of feminine interest in motor cycles. Last year it steadily increased, and at last men in general and manufacturers in particular are beginning to take us seriously and study our requirements. This was very noticeable at the last Show, where many low and open frame models suitable for ladies were exhibited.

In spite of all this, we have not yet entirely won approval, especially of the masculine variety, and we must not forget that the real reason is rather a complimentary one. All men are the same in one respect—and quite rightly so—they like a girl to be feminine, to leave the heavy work to them, to be looked after, and regard herself as the weaker vessel. Therefore a nice man hates to see a nice girl wearing breeches with a mannish air, hands in pockets, and walking with Gargantuan strides. He scowls when he sees her pushing a fixed geared machine against compression, and watches with scorn if she breaks down and futilely attempts to locate the trouble herself.

### How we can Alter this Attitude.

First of all, clothes. Now breeches, as we remarked once before in these columns, are safer, warmer, and neater than skirts, particularly on a diamond frame machine. But we need not wear them unnecessarily, on, for instance, an open frame lightweight or a scooter!

"A nice man hates to see a nice girl wearing breeches with a mannish air, hands in pockets and walking with Gargantuan strides."



"Personally had I a small brother, I would probably bribe him to undertake the job."

When we don them, we must remember that it is not the *garments* that men criticise, but the way we *wear* them. We have seen girls who are self-conscious and afraid to move naturally—and others who go to the opposite extreme and stand with feet about a yard apart and wear a battered hat which might have seen service in the W.A.A.C. There is no need for either of these. Let us be sure our boots are a good fit, coat a reasonable length, no frills (mental or actual), and people will like it and agree that it is the most sensible costume to wear on practically every occasion.

### Study our Mounts.

This is a very important point. It's not much use just knowing how to steer a machine. No wonder a man says a girl shouldn't drive if he comes across a disconsolate female sitting in the hedge waiting for help with nothing worse than a choked jet or sooty plug to account for it. We do not imply that we should all take out an engineering certificate, but that we should at least purchase a good motor cycle handbook and get hold of the main principles. Then, with the assistance of an expert (not without—one always gets hit over the first time!) take the engine down and put it together again, also pay some attention to tyres and their treatment and habits! A girl will not only find this interesting and useful, but will feel so much more on a conversational level with her motor cyclist friends. And they will have much greater respect for her intelligence than they have at present.

Another point—and there are slackers of both sexes on this score—let us keep our engines clean. Of course it's just as well to keep the whole machine clean, but human nature being what it is, one must make allowances for it. The thing to remember is, when arriving home after being caught in the rain and covered with mud, although fires and tea and hot bath tempt from inside, we must not push the 'bus into the garage and rush off. A good cavalryman always looks after

**Through Feminine Goggles.—**

his horse first. A good motor cyclist looks after her mount. It is not a *virtue* to clean a machine, but a necessity, and it doesn't matter in the least who does it as long as it's done. Personally, had I a small brother, I would probably bribe him to undertake the job.

### Competitions.

There is much diversity of feeling with regard to competition work for ladies. I can see no good reason why we should not enter club competitions, hill-climbs, local reliability trials, etc. Actual racing is, of course, a different matter, though we are not without supporters in favour of even this. Lt.-Colonel Moore-Brabazon, M.P., is one of the staunchest supporters in favour of our taking part in anything and everything—in fact giving us an open field. Unfortunately, his point of view is not generally shared, but in time, when people get more accustomed to the idea, it may be.

After all, the question is really a very individual one. Some of us may be perfectly fit for ordinary riding and touring, but totally unsuited to the strain of competitions or racing. On the other hand, some of us are probably stronger and healthier than many of the men who enter for these things.

". . . our femininity is useful sometimes. A nice smile goes a long way with the arm of the law. . . ."

Risk of accident is always a big stumbling-block but I think it is exaggerated. We take risks every time we cross Piccadilly Circus.

### Conduct on the Road.

Unfortunately, we are rather inclined to have a reputation for recklessness—or at any rate foolhardiness. It is undoubtedly a temptation, on a good machine, to "let her out." But there is a time and place for everything. Carry on, by all means, on a good road where there is no traffic and not too many corners (and a dearth of policemen), but otherwise we have no right to endanger the safety and property of other people. And in these days when all the best people are "broke" and insurance premiums are high it is as well to consider the machine.

We should never claim the feminine prerogative on the road. The road belongs to *all* motorists, and even then the men had it first. So, as far as that sort of thing is concerned, we are not women—we are merely motor cyclists.

Still, our femininity is useful sometimes. A nice smile goes a long way with the arm of the law if we have been unlucky enough to be caught doing those things which we ought not to do, or *vice versa*.

M. L.-T

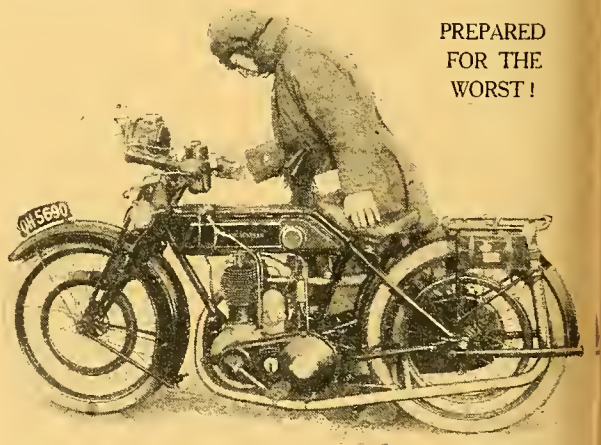
# MOTOR TAX REVENUE AND ROAD CLASSIFICATION.

## Little Prospect of an Early Revision of the Basis of Taxation.

IN the House of Commons Mr. Neal, Parliamentary Secretary to the Ministry of Transport, replying to Col. Sir A. Holbrook, said that, although the information was not yet completely available, so far as an estimate could be formed, it is anticipated that the cost of the collection of the present tax on motor vehicles would be some £400,000. The various methods of taxation by which the necessary revenue could be raised were carefully considered by a committee under the chairmanship of Sir Henry Maybury, the members of which were appointed by the late Minister of Transport from motoring bodies and the motor industry, together with representatives of the Ministry of Transport, the police, the Treasury, and the Board of Customs and Excise. This Committee, with only one dissentient, reported in 1920 against the petrol tax and in favour of the scheme which received legislative sanction in the Finance Act, 1920, and the allocation of the burden amongst the different classes of vehicle was framed by members of the Committee representing the trade and users, and was accepted by the Committee as a whole and by the Minister, unaltered. He did not think the time had yet arrived for a revision.

Replying to Major Glyn, Mr. Neal stated that the provisional classification of roads in Great Britain is now completed, and grants amounting to between £7,500,000 and £8,000,000 have been allocated to highway authorities towards the approved cost of ordinary maintenance and improvement of Class I. and Class II. roads.

The total gross collections for the motor tax account during the calendar year 1921 amounted to about £10,588,000.—*The Autocar.*



Watersplashes of considerable depth were evidently expected by this competitor—A. W. Thrush—in a recent Midland winter trial. Both the inlet and exhaust pipes of his Sunbeam have been extended upwards. Incidentally, the rear end of the tank has a neat leather cover to protect the enamel.

# DETECTING FAULTS IN A LIGHTING CIRCUIT.

## Methods of Tracing the Causes of Failure on a Typical Single-Wire Motor Cycle Electric Lighting System.

By ROAD RIDER.

MANY riders have, no doubt, made their first acquaintance with electric lighting circuits this winter, and the simplicity of the magneto ignition circuit has checked the progress of education in tracking electrical faults, which the old accumulator ignitions had commenced.

The circuits in use on the score or so of electric lighting equipments now marketed vary so enormously that practically every set requires separate treatment for a novice; but in the course of time the makers will doubtless perfect and complete their handbooks on their own productions. At present many installations are sold without any "book of the words"; and certain manuals are so vague and ill-devised that they will not save novices from resorting to professional help.

The purpose of this article is to treat a simple and popular circuit—that of the Villiers flywheel magneto lighting—as an illustration of the principles which underlie diagnosis. In actual practice, most of the faults imagined in the subjoined treatment would never occur—have not, in fact, occurred—either at the works or to private customers. But the circuit is an excellent example to take as an object lesson, for it includes three separate "loops," and is free from fuses and cut-outs, items which are invaluable on more complex circuits, but are apt to puzzle the beginner in the early stages of his study.

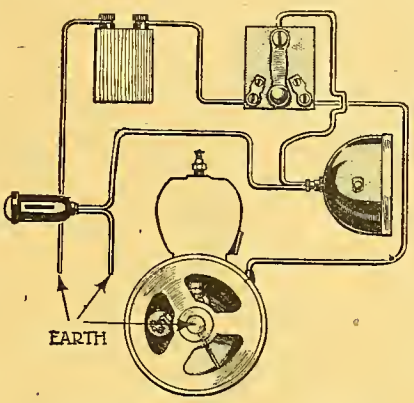


Diagram of circuit in a flywheel magneto and lighting outfit.

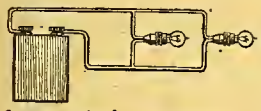
In this particular case, lighting current is *generated* by a simple addition to the flywheel magneto, and this current is used to light the lamps whenever the engine is running. When the engine is stopped, the flywheel immediately ceases to generate current, and the lamps are connected by a hand switch to a dry battery.

There are two points to be noted about the wiring. In the first place, it is of the *earth return* type; the frame is used for the negative portion of all three "loops," viz., battery, flywheel, and lamps; all wires contain but one cable; and the bulbs consequently have but one connecting contact on their sockets. Secondly, the head and tail lamp are wired "*in series*," and not "*in parallel*." The difference is indicated in the sketches.



Lamps wired "in parallel."

### Imaginary Troubles Diagnosed.

The following diagnosis of imaginary troubles may now be studied in conjunction with the diagram of the entire circuit:—

1. The rider is starting out. His lamps refuse to light. What is the matter?

As the engine is not running, the flywheel is not generating current. The lamps can only light off the battery.

Is the switch set to the "battery" position?

If not, turn switch to "battery." If switch is in correct position, are the lamps themselves at fault, or does the fault lie in the battery? This is easily tested by starting up the engine in neutral, and turning the switch to the "magneto" position. If the lamps now light, their previous failure depends on the battery or the battery wires. (If the lamps still do not light, we must presently start a new train of thought.)

Suppose first that the lamps light up properly with the engine running, and the switch in the "magneto" position.

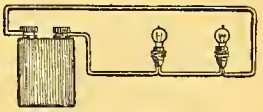
Examine (i.) wire from switch to battery, (ii.) wire from battery to frame, for bad contacts, damaged insulation, and frayed ends. If these wires are perfect, the battery is obviously exhausted, and a new one must be procured. In the meantime, it is possible to use the machine, as the flywheel will light the lamps when the engine is running.

2. The lamps will not light with the engine running.

What a machine gunner would call "immediate action," in this case hinges on whether the lamps will light with the switch at "battery" position. If they will, the lamp circuit is clearly in perfect order, and the area of research becomes very narrow. A glance at the circuit diagram will show that the fault lies along the wire from the switch to the magneto, or in the magneto itself. So the rider's action is: Examine wire from switch to magneto for bad contact, damaged insulation, and frayed ends.

If the wire is perfect, we are driven to suspect the magneto. The wire enters *via* a split brass collar. Is this making good contact? Is it shortened by mud and water? Failing such a discovery, we are driven to suppose that the ignition coil inside the flywheel has failed, and expert assistance or a spare part will be necessary.

3. But suppose that the lamps will not light either on the battery with the machine stationary or on the magneto with the engine running? It is extremely unlikely that both the battery and the magneto, or their respective circuits, should play the fool simultaneously. We are thus driven to suspect the lamp circuit. This circuit takes the following path: centre terminal of switch; wire from switch to head lamp; head lamp bulb: wire from head lamp to tail lamp; tail lamp



Lamps wired "in series."

**Detecting Faults in a Lighting Circuit.—**

bulb: earth connection between tail lamp and frame (*via* its metallic mounting). The return of this circuit is *via* the frame, and if the earth connections are clean and tight, this part of the path will be O.K.

In this circuit the two bulbs are obviously the most vulnerable items. If a good light is available, an eye test may suffice. Many bulbs discolour when they go dud, and in others the damage to the filament may be visible. If the light is poor, or for other reasons the operator cannot be confident of a test by eye, the quickest road test is to slip two spare bulbs into the sockets. If only one spare bulb is available, it may be tried in each lamp in turn, but it clearly cannot solve matters if *both* bulbs are dud, since *one* faulty bulb can interrupt the entire circuit.

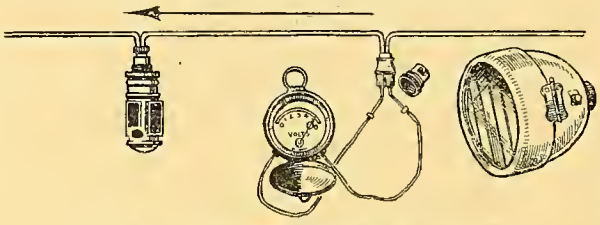
Finally, suppose that the operator possesses no spare bulb and no voltmeter? In that case, his only bulb test will take the form of earthing the wire between the two lamps by sticking a pin clean through its *cable* (not through the rubber covering), and earthing the pin to the frame by means of bare copper wire. This will cut the tail lamp clean out of the circuit, and both bulbs can then be tried successively in the head lamp. If either of them will light up, the rider can immediately proceed minus his tail lamp.

If he has a voltmeter, precise tests are possible. First switch on to "battery," and connect voltmeter from "battery" wire terminal on switch to bright metal of frame. If no current, overhaul the two short battery wires. If current is shown, fault is in lamp circuit.

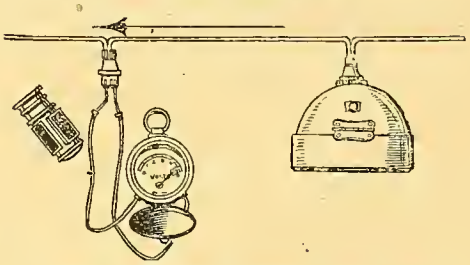
A little clear thinking is required to use the voltmeter intelligently, and the diagram will assist us. We are presuming that the lamp circuit contains a fault; we suspect the bulbs, as being the most fragile items in that circuit; perhaps only one of the bulbs is at fault, but conceivably both of them are burnt out (as might easily happen if the engine were recklessly revved in neutral). Dud bulbs are shown as gaps; the top diagram shows the lamp circuit broken by a dud head lamp filament. Remove the bulb. Connect the voltmeter to the two terminals of the head lamp. If current is shown, a new head lamp bulb will restore the circuit (use the tail lamp bulb in the absence of a spare, earthing the tail lamp wire as previously described).

The second diagram shows the circuit broken by a dud tail lamp bulb. In the previous test (substituting voltmeter for head lamp bulb) no current will be shown. The next step is to remove the tail lamp bulb and connect the voltmeter in its place, one prong to the lamp connection and the other to the body of tail lamp. If current is shown, the head lamp bulb must be O.K., and the tail lamp bulb is dud. If no current is shown, one of two faults may exist. Perhaps the earthing of tail lamp is faulty; this can be proved instantaneously by connecting the voltmeter with one prong to the tail lamp connection and the other prong to bright metal on the frame. If current is now shown, tail lamp earth connection is faulty. Otherwise, the head lamp bulb and the tail lamp bulb are both dud; no current can be obtained at the tail lamp when the head lamp bulb is dud.

VOLTMETER TESTS ON LAMP CIRCUITS.



Head lamp bulb faulty; voltmeter shows current.



Tail lamp bulb faulty; voltmeter shows current.

(If no current is shown at either holder, testing both separately and with the other bulb *in situ* in each case, it indicates that both bulbs are faulty.)

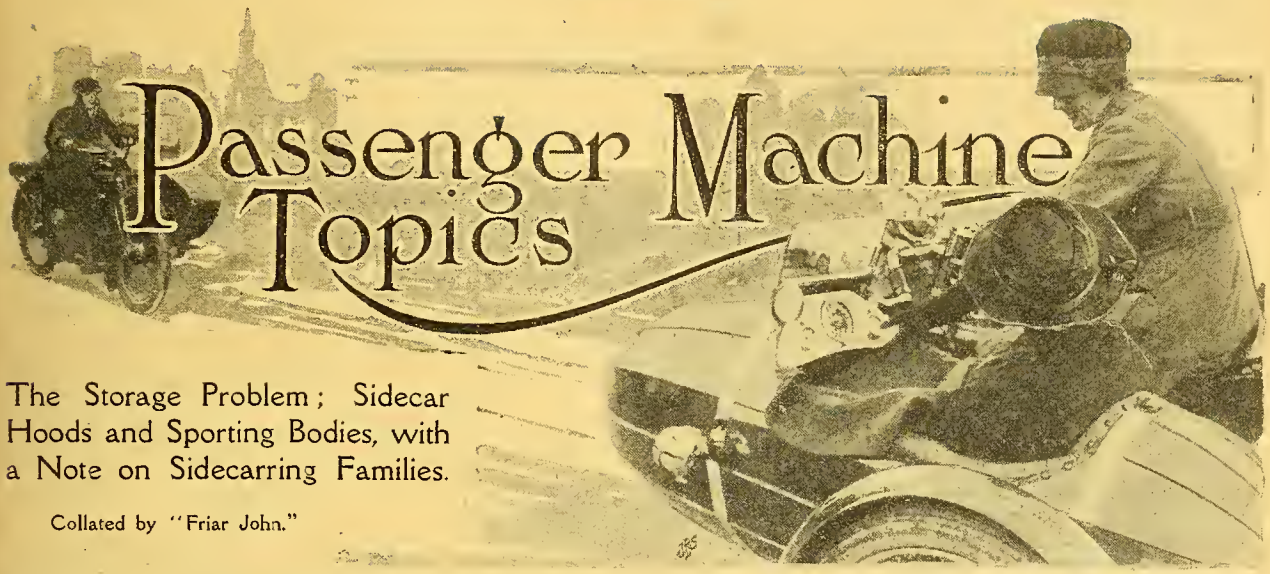
4. There is one more imaginary circumstance to be reckoned with. The rider goes out to his garage, switches on to "battery," the head lamp lights, but not the tail lamp. He starts his engine, switches on to "magneto," and obtains the same result. What is amiss? *Not* a dud tail lamp bulb, as many novices would imagine. As the diagram shows, a dud tail lamp interrupts the whole lamp circuit, and would prevent both lamps from lighting. In fact, the filament of the tail lamp bulb may be regarded as part of the earth return from the head lamp, as they are wired "in series." The fact that the head lamp lights with the tail lamp remaining dark is clear proof that there is a short to earth (*i.e.*, the frame) somewhere along the wire between the two lamps, probably a burnt or chafed patch on its rubber covering. If this short is traced and wrapped with insulating tape, the tail lamp will light up in 999 cases out of 1,000.

It need not, of course, be imagined that these troubles would actually occur even in years of riding; but knowledge breeds confidence.

## NUMBER OF MOTOR CYCLES IN GERMANY.

OUR French contemporary *L'Auto* has published some interesting figures relative to the number of motor cycles in Germany. The particulars cover the period from 1907 to 1921, and show some rather extraordinary fluctuations with a very slight increase in the number. In 1907 the number of motor cycles registered was 15,700. For the next year there was an increase of approximately 4,000. In 1909 the increase was rather over 1,000, and in 1910 there were 22,283. After this date there was a steady drop, and in 1912 there were but 19,958; 1913 and 1914 show an increase, the number registered before the war being 22,457. In 1920, after the war, there were only 9,369, but in 1921 26,729.

# Passenger Machine Topics

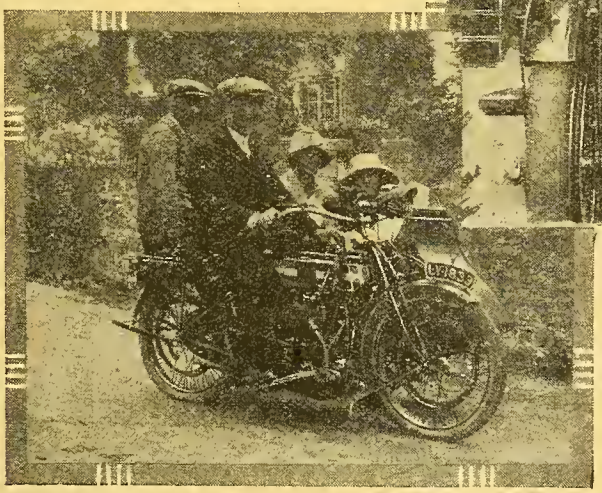


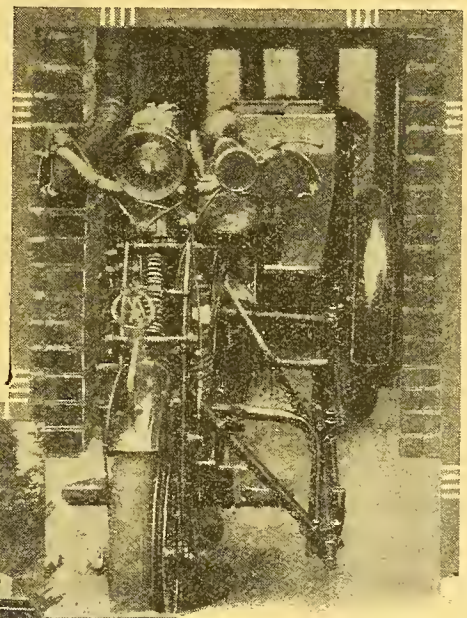
## The Storage Problem; Sidecar Hoods and Sporting Bodies, with a Note on Sidecarring Families.

Collated by "Friar John."

DURING the last month or so I have inspected some scores of new houses North, South, and West of London, with an idea of purchase, and have been astonished at builders' lack of forethought. Semi-detached villas planned to save labour, admirable in their way, but of course depressingly characterless, are still being erected without space being allowed at the side for the passing of a sidecar. And where garaging is four shillings a week or more, as it is in some of the London suburbs, this lack of ground space is a decided drawback

An obvious solution to the garaging problem is the use of a folding chassis such as the Paragon and Hopley. One user of the latter—Mr. C. H. Mauger, of New Cross, whose machine we reproduce—speaks in high praise of his outfit. His summary of its advantages is of course simply the advantages of possessing a garage at home, for he says, "You can do your own repairs in your own time, and the machine being kept cleaner and more frequently tuned up will command a better price when sold"—quite true. He says also, "If you get trouble on the near side of the machine you can remove the body in a second or two and get to work without standing on your head"—pertinent as well as an indictment. So besides adding two feet to your entrance this sidecar actually possesses other advantages over the common or garden sidecar.

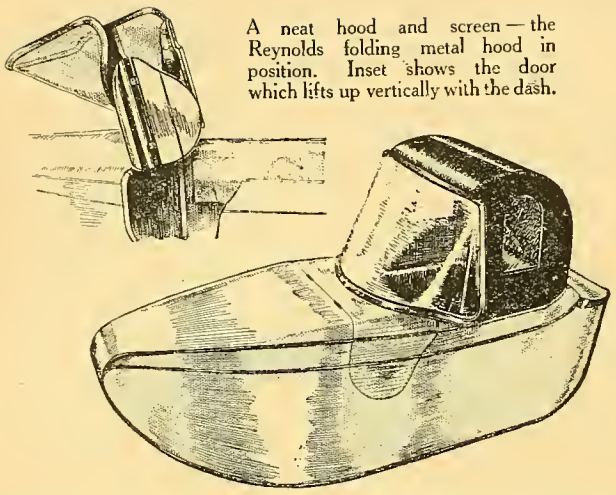




(Left.)—This illustration proves that Mr. C. H. Mauger has confidence in the folding sidecar, for journeys with a load of "four-up" are frequently undertaken on his B.S.A. (Right.)—Body detached and chassis folded back to allow exit from a 3ft. door.

One does really wonder why the good features of the folding chassis are not more widely known, for there are hundreds of sidecar owners who would not think the trouble of detaching a body too much if by so doing a saving of £10 or £12 a year could be effected.

THE sporting sidecar shown in the heading is attractive because it does not o'erleap the bounds that separate the sporting from the ordinary sidecar. I have seen a flapping hood and a large screen fitted to a "dirigible" pattern sporting body, an effort just about as incongruous as elastic side boots and mittens on a "flapper." Observe also the decorative screen, the dashboard with clock, speedometer, ammeter, and mileage recorder—a sufficient collection of instruments to amuse the passenger should conversation and the landscape pall, besides adding to the outfit's appearance.

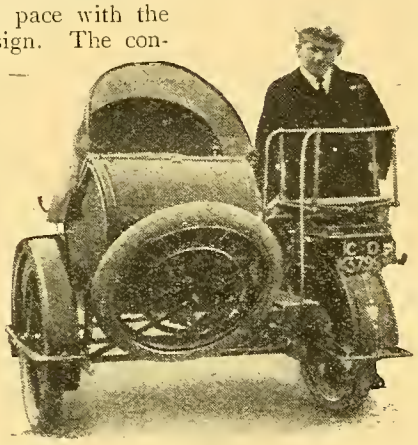


A neat hood and screen — the Reynolds folding metal hood in position. Inset shows the door which lifts up vertically with the dash.

WE have advanced a long way in sidecar comfort since the coach body was first introduced, but improvements in hoods have not kept pace with the improvements in chassis and body design. The conventional sidecar hood is usually rather an ugly, cumbersome affair restricting the entrance of rain but failing to protect completely the passenger, in the same way as a car hood fails unless well valanced.

The design shown above by Mr. S. T. Reynolds is a commendable effort to produce a combined hood and side screen, and, like the roll-blind hood shown on the Sidecar Body Co.'s stand at Olympia last November, is made of metal. Questions of rattle immediately suggest themselves, but by the provision of guides inside the body against which the hood is tightly wedged, any tendency to vibration is eliminated. No doubt the main object Mr. Reynolds had in mind was neatness of the outfit when the hood was not in use, for being hinged on the body immediately behind the screen, it folds out of sight, following the contour of the back rest.

This device in conjunction with a sporting sidecar would answer very well indeed, although compared with the standard hood the space is rather restricted; but who after all wants the standard ugly hood on a fast sporting outfit? This design provides protection which when needed is usually needed very badly, and the sacrifice of space on those occasions is not thought of. An interesting detail in connection with Mr. Reynolds's sidecar lies in the construction of the door, which is hinged to the dash and lifts therewith. Very shortly this hood and screen will be placed on the market by Mr. Alfred Goad, 122, Maida Vale, London, W.9.

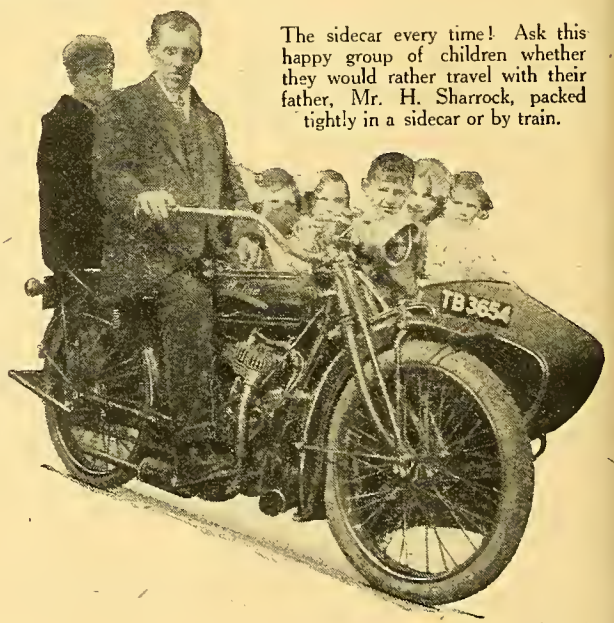


Protecting the young pillion rider. A naval officer's "safety first" device.

NO doubt Lieut. Tope was wise in railing in the Tan-Sad on his B.S.A. outfit, for it is a "safety first" precaution, and from experience "safety first" has probably been found to pay. This little device, faintly suggestive, too, of a ship's bridge, gives the youthful occupant a greater sense of security besides relieving the driver of a certain amount of anxiety, especially if the "pillionite" be a mischievous boy of nine or ten years of age. This last remark was inspired, by the way, in consequence of an incident on my last sidecar ride, when the pillion passenger (eight years old) was caught whilst at speed leaning over the rear mudguard in an effort to wear a hole in the tyre with a piece of slate pencil.

THERE is something irresistibly attractive about a sidecar full of youngsters, and I have no use whatever for the argument against such overloading, providing, of course, the sidecar connections are safe. Mr. Hugh Sharrock is to be congratulated on his happy family and also on his determination to give the kiddies sidecar fun instead of bundling them off on their holiday by train and he and his wife going by sidecar. The photograph showing the "usual complement" was taken on a holiday run last autumn.

MANY a motor cyclist can be forgiven for using words more forcible than polite when a brand new cover has been lacerated by a sharp flint. We have suffered cuts, one being an inch across and another of the same lateral dimensions but so deep that it punctured the tube in two places. The first of these cuts was filled with U-need-it, which has stayed in position for the last three to four hundred miles. The second cut has been similarly treated, but has not had such a long trial. U-need-it is very simple to use, and certainly appears to do what is claimed for it, both for cover and inner tube repairs.



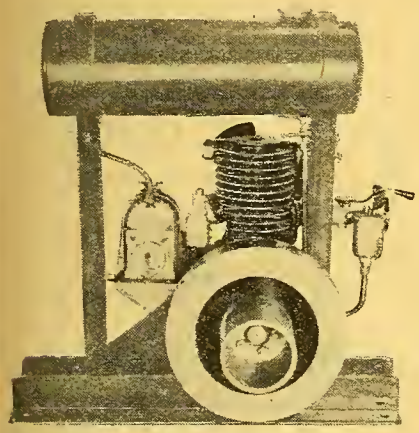
The sidecar every time! Ask this happy group of children whether they would rather travel with their father, Mr. H. Sharrock, packed tightly in a sidecar or by train.

# BRITISH INDUSTRIES FAIR.

## Interesting British Motor Cycles and Accessories Displayed for Overseas Buyers.

OPENED on February 27th and continuing till March 10th, the Birmingham section of the British Industries Fair is held at Castle Bromwich Aerodrome, where ample garage accommodation is provided for visitors.

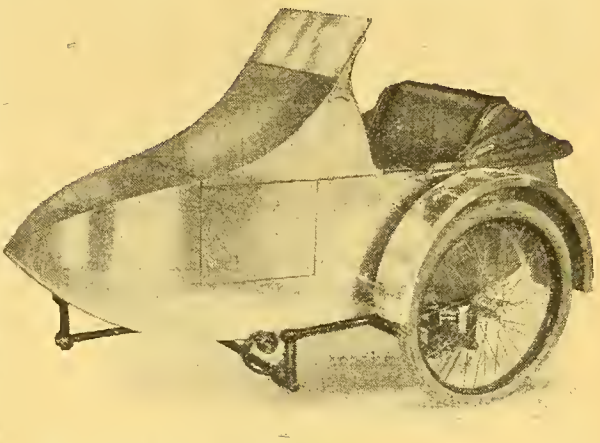
From the motor cyclist's point of view the number of exhibits is meagre, and the stands are so widely distributed and mixed amongst displays of household fittings, hardware, and machine tools, that it is difficult to obtain a fair idea of the extent to which Midland manufacturers are concerned.



An air-cooled Grigg two-stroke power unit adapted for stationary engine work.

Of complete motor cycles there is little novelty. A full range of B.S.A. machines is perhaps the most imposing exhibit. Three 4½ h.p. Quadrants are shown, two being chain-driven models with sidecars attached, the solo machine having final belt transmission. The sporting Coulson model with o.h.v. Blackburne engine is attracting some attention, and a neat coupé sidecar is exhibited on the same stand with 4 h.p. and 2¾ h.p. side valve machines.

The Grigg miniature machine is staged, but has undergone no important modifications since Olympia, though a simple and moderately priced engine unit, suitable for lighting, pumping, etc., is shown. Another neat lightweight exhibited is the Atlas, which has been already described in *The Motor Cycle*; it is manufactured by the Aston Motor and Engineering Co., Ltd., of Whetton Lane, Aston, Birmingham. Its little two-stroke engine has a bore of 55 mm. and a stroke of 60 mm. (142.5 c.c.). Chains are employed to drive the magneto and countershaft, both being protected by a common cast aluminium case. Final drive is by belt, and with 26in. × 2in. tyres the machine sells at the moderate figure of £31 10s.



Ample protection is afforded by the up-swept hinged dash of the Orion sidecar—one of the few new designs on exhibition.

### A Water-cooled Two-stroke.

A complete range of Blackburne engines is available for inspection, and Idris John Motors, Ltd., 1, Central Buildings, London, S.W.1., show the well-known 292 c.c. Union two-stroke engine, and also a 350 c.c. water-cooled model for stationary work. Complete and sectional models of the Sun-Vitesse rotary valve engine are also to be seen.

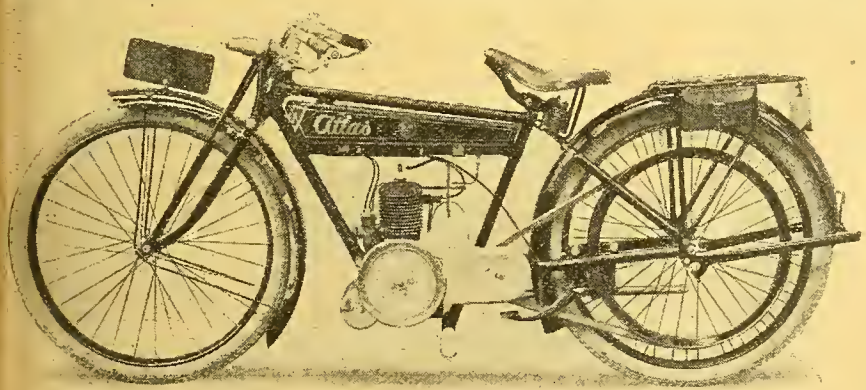
Gear boxes are represented by the Moss Gear, shown with foot or hand control, and Messrs. Accles and Shelvoke, Ltd., Talford Street, Aston, Birmingham. The latter firm show a strongly constructed three-speed box with cork clutch and spring tooth kick-starter.

A very taking polished aluminium sidecar is exhibited by the Orion Sidecar Co., of Acton, London, W.3. Access to the well-upholstered seat is obtained by raising a hinged scuttle dash—on which is mounted a Triplex screen—before opening the door. A glove and map locker is placed in the dash, and there is a very large locker in the back of the body, the opening of which is doubly protected by the lid and the hood when the latter is folded down. Somewhat unusual springing is adopted, for while coil springs support the rear part of the body, short C springs are used in front. The chassis is rectangular and is provided with four points of attachment.

### Accessories.

Amongst the accessories, Easting windscreens are so familiar as to need no description. Maplestone forks for all types of machine, Webb brakes for both front and rear wheels, and Moss gears are all shown on the same stand, together with a Sun-Vitesse machine equipped with these accessories. The Webb combined rear brake and cush drive is a very fine piece of work, the shock absorber being composed of compression and rebound springs neatly enclosed in the driving side of the hub.

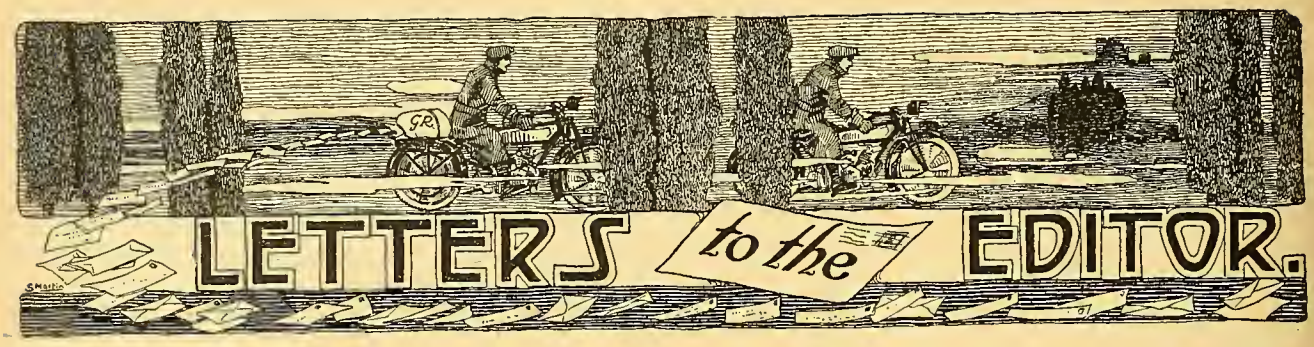
Dekla specialities, chiefly horns, lamps, and other handle-bar fittings, are on view, and the Beadless Tyre Co., Ltd., of Lloyds Bank Chambers, Jamaica Row, Birmingham, shows a simple and effective double capacity pump and the Amplokon spark intensifier. C.A.V. magnetos and dynamos and a few other useful accessories may be discovered in various parts of the three great buildings.



Introduced last autumn, the £31 10s. Atlas lightweight made its first public appearance at the British Industries Fair, Birmingham.

## TOURING IN IRELAND.

MANY inquiries have recently been addressed to the R.A.C. on the possibilities of motor touring in Ireland, and it is interesting to hear that a goodly number of American visitors have sought information as to the probable requirements in connection with the licences, Customs duties, and so on. In the present transitional stage it is not possible to give any definite information nor to predict what the licensing, Customs, and other formalities are likely to be.



The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

## *SIDECAR FUEL CONSUMPTION TESTS.*

Sir,—The correspondence between Mr. Booth, of Harrow Road, and Mr. Loughborough, of the A.C.U., is surely the most amazing thing which you have published.

What jurisdiction has the A.C.U. over the liberty of the subject, and why? Also, since when? Words frankly fail me on an occasion such as this.

On reading Mr. Loughborough's letter again I am truly thankful that my modest sidecar outfit is not painted pink, otherwise the A.C.U. might object. However, enough of this, and hats off to Mr. Booth, to whom I am writing by to-night's post promising support of his trial in spite of the complete alphabetical list of associations.

In conclusion, may I say that I was regretfully compelled to give up membership of the B.M.C.R.C. owing to the A.C.U. informing me that I could not ride in one of my own club's race-meetings unless I subscribed 5s. to its funds for some obscure purpose? I paid, but it was the first and last time. I am now my subscriptions in pocket and retain my liberty as a freelance motorist.

It is indeed a sorry thing when an association formed for the specific purpose of mutual help forsakes the path of fellowship for the sordid road of financial gain.

J. L. HENRY.

Sir,—In view of Mr. Loughborough's letter, I shall be glad to know if I may go out for a ride on my motor bicycle next Sunday morning—if it is fine?

Ilford. V. CAREFUL.

Sir,—There appears to be no reasonable objection to Mr. Booth's proposal; in fact, such a test would be most instructive to all, and especially to many, like myself, purely recruits who do not belong to the A.A. or the A.C.U. and are probably undecided which of the unions to join.

Personally I am unacquainted with the rules of either association, but if by any chance there happen to be regulations interfering with the liberty of the non-member, then my final choice will not be the A.C.U.

W. LOVETT.

Sir,—On the face of it, Mr. Loughborough's letter is rather remarkable, and if his argument is valid motor cycle clubs which hold gymkhanas, etc., open to all comers, as they often do, will have to proceed with greater caution in future. So will firms which organise little outings, sometimes naming them "trials," for riders of their particular machines. In these cases, too, the offence will be more heinous, for usually prizes are awarded. This we understand will not be done in the case of Mr. Booth's event.

Again, parties of unattached enthusiasts who foregather to make mountaineering attempts on local precipices must go warily in future if they are not to arouse the ire of the Auto-Cycle Union. In fact, if any more readers discover freak hills—a pastime which has enjoyed some popularity recently—it would seem advisable that they keep the fact a dark and deadly secret. A letter to *The Motor Cycle*, or any other publication, would apparently constitute the first steps to organising an open competition. B. ILGE.

London, W.C.2.

Sir,—I sincerely hope Mr. Booth will stand up for his suggestion, despite the views of the secretary of the A.C.U., which strike me as being absurd, considering he has no connection whatever with that body. This test, I think, should prove of use and interest to sidecar owners, and I sincerely hope nothing occurs which will prevent its taking place.

WM. A. MOSELEY.

Sir,—I am a member of the A.C.U. who, beyond paying an annual subscription, does not hear much of the workings of my society.

I should like to ask how the Union has the power, since it is neither a Government nor a police organisation, to prevent a party of motor cyclists carrying out any activity (such as a consumption test) which is within the law.

G. O. TIPPETT.

Sir,—But for the fact that your correspondent, Mr. H. S. B. Booth, definitely asks for readers' observations upon the letter addressed to him by the A.C.U. and dated February 13th, 1922, I should not presume to meddle in matters not directly any concern of mine.

However, the attitude taken up by the A.C.U. is, in my humble opinion, quite contrary to the spirit usually evinced by that hitherto broadminded body, and I regard their action as mean-spirited, entirely uncalled for, and officious to a degree. One cannot but imagine that someone has acted very hastily in paying Mr. Booth the indirect compliment of taking so much notice of what appears to be a private matter between private motor cyclists by causing such a letter to be sent.

Were the letter addressed to a person or body of people who had agreed to conform to the rules and regulations of the A.C.U., then not a word could be said, for the A.C.U. would be very much within their rights.

I imagine Mr. Booth will please himself whether he holds or promotes trials or competitions of any sort or kind, and will pursue his own course and allow the A.C.U. to pursue theirs; but I would like to draw his attention to the fact that I consider that members of the A.C.U. or affiliated clubs are likely to take the view that they are contravening the *spirit* of their membership if they support trials which the A.C.U. chooses to discourage, and this is the view that I myself should take were I interested in the objects of Mr. Booth's trial, which incidentally I am not.

The above, however, does not alter my opinion in the least of the action the A.C.U. have taken in addressing to Mr. Booth a letter which I consider is in subject matter entirely outside their rights, and officious and dictatorial in tone. If one were to concede that the A.C.U. were within their rights, which I do *not*, even then I consider that it would have been somewhat more discreet and considerably more dignified to have let the matter pass.

Lastly, let me say that no one recognises more readily than I the energy expended and the good work done on behalf of motor cyclists by the A.C.U., but I consider that in this instance they have overreached their function and behaved tactlessly.

DONALD WATSON.

Sir,—In all probability Mr. Booth is not a member of any motor cycling club, and one can imagine his surprise and comments on receiving such a letter.

A motor cycling club, if affiliated to the A.C.U., agrees by the signing of the affiliation forms to conform to the rules of the Union, one of which is to refrain from running open competitions without a permit, but surely the secretary of the A.C.U. is out of his ground when he warns a private motor cyclist, a free citizen to wit, that the A.C.U. will not allow a private competition amongst private motor cyclists which he proposes to organise to take place, simply because it does not see fit to grant a permit.

The point seems to me to be this: If Mr. Booth were acting on behalf of an organised club, the A.C.U. would have jurisdiction over the competition, but since he is a private individual who has no interest in the A.C.U., he is entirely beyond its jurisdiction, and can do what he likes.

Until such time as the A.C.U. has full control over the actions of all those who use the motor cycle, such a "mail-fisted" letter as that written to Mr. Booth can only do harm to the A.C.U., heap ridicule upon its head, and cause motor cyclists to ask, "Who are these people?"

In conclusion, I would say that, although a keen competition rider and a member of three motor cycling clubs, I have no interest in Mr. Booth's petrol consumption test, and doubt whether it will serve any useful purpose, except provide an enjoyable afternoon to those who participate in the test.

But, nevertheless, let the private motor cyclist have the right to own his own machine and control his own actions. Go ahead, Mr. Booth. RORARDO.
Romford.

[The above letters are typical of a batch received by *The Motor Cycle* on the subject. In an article in this issue, the A.C.U. secretary expounds the attitude of the governing body toward private competitions.—ED.]

### *REGARDING THE LOW TWO-STROKE.*

Sir,—I read with interest your description of the Low motor cycle, and, while appreciating the grit and resources one must have to carry through such a design, there were a number of points that immediately suggested themselves.

Firstly, to decarbonise would mean taking the whole power unit from the frame, a tremendous job in itself for any unmechanically-minded person. True, the machine scores on the grounds of cleanliness, but this is surely outweighed by the oil and petrol consumption and initial cost, not to mention weight and frictional resistances of such a design.

Are there any patented features about the design?

Personally, I think it is up to Professor Low to produce a machine which would conform more to his theories regarding simplicity and economy that he so often gives voice to in the motoring press. ANGUS McGREGOR.
Upton, Birkenhead.

Sir,—As far as I can see from your illustration, the front forks are the same as those described by me in *The Motor Cycle* of August 8th, 1918.

It is a pity Professor Low did not fit a spring frame to be able to take full advantage of the front forks.

Perhaps he will be glad to learn the forks can be improved upon by using shackles, as on the old B.S.A., and pivoting the middle of the spring to the front end of these, as Mr. Montgomery has also thought out but not yet made.

I further refer to my letter in *The Automobile Engineer* of January, 1921, under Correspondence.
A. VAN DER MEE, W.I.
The Hague.

### *MOTOR CYCLES FOR BOYS AND GIRLS.*

Sir,—As a steady, middle-aged "potterer," I have read with alarm the article, "Motor Cycles for Boys and Girls," by Lt.-Col. Brereton. Surely we motor cyclists have enough to bear from road-hogs, chars-à-bancs, etc., without our terrors being added to.

I think I can claim a greater knowledge of boys than Lt.-Col. Brereton, as in the course of my duties I come into personal contact with the boys of 500 schools every year, and my experience teaches me that the average boy of 14-16 years of age is a reckless, irresponsible dare-devil, entirely devoid of nerves. I will not accuse him of being selfish, but he is certainly thoughtless. (What boy isn't?)

It was this very recklessness, dare-devilry, call it what you will, in our young pilots (Heaven bless them!) which gained us our supremacy in the air during the war, but we don't want it illustrated on our roads.

The law which grants licences to boys of 14 must certainly be a "hass."

The motor cyclist who is shortsighted, deaf, or crippled, knows his limits, and the rest of us have little to fear from him, but the average boy of 14 wants speed, and knows no limit.

Fortunately, we see very few boy motor cyclists on the road, which makes me think that parents are evidently of the same opinion as XH 3296.
Canterbury.

Sir,—I do not at all agree with the author's conclusions. The age is far too young; seventeen is quite early enough. Why should nippers have placed in their hands such an expensive toy? Let them earn them; then they will appreciate them.

I say a pedal cycle is good enough for youths. They have the energy necessary for the propulsion, and it is better for their health in every way. MIDDLE-AGE.
Hull.

Sir,—I read with great interest your article on "Motor Cycles for Boys and Girls" and agree with what Lt.-Col. F. S. Brereton states. I am sure there are many readers like myself who are only a bare 15 years of age, and who have no chance of owning a motor cycle before they are 20 years old—and then perhaps some old model which requires "slight adjustments." L. C.
North Ashton, near Wigan.

Sir,—Your readers may have noticed the number of "junior" motor cyclists who are on the road to-day. By "junior" I mean boys of 14 to 17 (*not* the young "bloods" who sizzle by and scare our maiden aunts) and girls of 17 onwards.

Are these future supporters of the motor cycling community being neglected? Are suitable models being provided for them? Well, perhaps so on the solo side, but when one considers sidecar models, it certainly seems that this section is being let alone too much. "DIAPHANTUS."
London, N.W.7.

THE TOURIST AT BROOKLANDS. Brooklands, even in winter, is far from being a desolate, barren waste, attractive only to the speed man; as the picture conveys, beauty lurks in every corner.

### T.T. RACES FOR PRIVATE OWNERS.

Sir,—As a solution of the problem, could not the authorities be approached to allow a race of one I.O.M. lap (37.75 miles) after either (or both) of the existing races, according to number of entrants. The start could be made from the top of Bray Hill a short time after 3.15 p.m., the competitors being followed by the official car.

This would only necessitate the course being kept clear for a matter of an extra hour or 90 mins.

Lytham. T.T. O.H.V.

Sir,—This is clearly a test for the old saw, "Where there's a will there's a way." We have had some cold water and pessimism. Where are the optimists?

W. R. FIND.

### HEAVY SIDECAR FUEL CONSUMPTION.

Sir,—In reference to the letters which have appeared in your columns recently with regard to the two-seater Matchless outfit, I should like to say a word in favour of this most excellent machine. Curiously enough, my consumption figure is exactly the same as that of "A.F.S.," *viz.*, 54 m.p.g., but my usual load is heavier than his, and includes passengers (28 stone), spare tins of petrol and oil, accumulators, and full tool kit. Usual disclaimer.

Ealing, W.5. TWO-SEATER.

Sir,—Most carburetters can be tuned to give a satisfactory consumption at a given throttle opening and under particular atmospheric conditions, but few will give a satisfactory *average* consumption under varying engine speeds, road conditions, and atmospheric conditions.

One of these few instruments is the Binks, by means of which I have, during the past year, obtained an average consumption of 65 m.p.g. with an 8 h.p. Enfield-Jap outfit, with wife, two children, and a dog on board.

The essentials for a good average petrol consumption are:

(1) The correct proportions of air and petrol at all throttle openings, which means the correct ratio of choke tube to jet size, both being variable.

(2) A clean engine.

(3) No air-leaks in the induction pipe, valve caps, or sparking-plug.

(4) Properly adjusted road wheel bearings and brake shoes, so that the wheels spin quite freely; and transmission neither tight nor loose.

(5) A strictly moderate average speed.

The usual disclaimer.

NO. 861.

Colchester.

Sir,—I see that "Acme" is finding difficulty with a W.S.R. jet in conjunction with an 8 h.p. J.A.P. engine.

Now I have used one on my Matchless-Jap outfit for two years, and find it a great boon, my m.p.g. for the last 6,000 miles working out at 56, including evaporation, etc.

The fault I found with this jet—and from "Acme's" letter he is obviously up against the same difficulty—is that the thread on the needle is too coarse a pitch, so that a very small movement of the knurled disc will make a lot of difference—in fact one quarter of a revolution, *i.e.*, 90° either way of the correct setting, will stop the engine. Another point is that there is no zero point marked, so that if some curious cuss spots a new knob on an unattended machine and twiddles it, as he probably will, great difficulty may be experienced in re-starting.

The cure for both these troubles I have found is to braze a small 2in. arm made of ¼in. brass rod exactly at right-angles to the normal setting. This in my case admits of a movement of 120° before striking any obstruction. A fine setting is thus obtained, and the zero point is instantly found.

ARCHIE HANDFORD.

Sir,—I have been getting over 70 m.p.g. from my 8 h.p. Acme outfit, not on long journeys, but short trips of 20 to 30 miles. The only alteration made to my machine was the fitting of a set of Flexikas. The carburetter is the Amac 2-lever, with a 28 jet.

Northampton. ANOTHER ACME.

### STEERING BALANCE.

Sir,—I was very pleased to see the article on steering balance by "A.E.S.," as it is a point that has been sadly overlooked by a large number of designers.

I know nothing of frame design, but should like to suggest that most of the best machines in this respect carry the weight pretty far forward, and have the steering head *well over the front wheel, and not very steeply raked.*

The Indian Scout is a good example of these features, and steers particularly well, I believe.

My first machine, a 1907 Triumph, could be ridden round sharp bends with hands in pockets, while I cannot let go the bars of my present mount, a 1919 model of the same make unless the speed is over 30 m.p.h.

Is there any way of improving the steering of an existing machine? I have already tried adjusting saddle and bars.

Clare, King's Co. J.E.G.

### WHEN BORED WITH MAIN ROADS.

Sir,—With reference to the freak hill near South Harting, Sussex, I presume your correspondent means that road which ascends the N.W. side of Beacon Hill; it cannot be very steep, as I have climbed it comparatively easily on a Dunelt and sidecar; but I must own to failures with other machines in previous years. From the 1in. Ordnance map the average gradient over the worst 300yds. is 1 in 5, although the centre portion between the bends is only about 1 in 10, thus making the corners stiff.

Other interesting hills in this locality are:—

Sussex.—1. Due south of Elsted, with 200yds. 1 in 4 (Eastern slope of Beacon Hill). 2. Didling Hill, over ½ mile averaging 1 in 7. 3. Bignor Hill, south from Bignor, steep section of 1 in 3½ (?). 4. South from Heyshott, nearly ½ mile, 1 in 5.

Hants.—1. South side of Stoner Hill, N.W. from Lythe farm. 2. S.W. from Liss. Up through Oakshott Wood.

C. J. EVERSHED.

Sir,—Referring to the South Harting hill, I was so surprised to hear that it is unclimbable that I looked up my maps to make sure that it is the same. I found that it was the same hill that I have climbed and camped on at least a dozen times in the last few years. My present outfit is a 5-6 h.p. Rudge Multi, with touring sidecar.

W. CLAPHAM.

Sir,—I have been very interested in the letters re Beacon Hill off the Elsted Road, by Mr. Reg. S. Fowler and Mr. L. J. Fleming, of the West Sussex Motor Cycle Club.

On Sunday, February 12th, I, with three other friends, decided to sample this unclimbable hill. A 3½ h.p. Norton, 2¾ h.p. A.J.S. and 1914 4¼ h.p. James sidecar, with passenger, all made successful climbs, a Rudge Multi only failing.

As we are thinking of starting a motor cycle club in this district, we should be delighted to meet the West Sussex Club at this hill one Sunday afternoon, and if they are not satisfied with this hill we can show them another which will, I think, tax their machines even more.

If Mr. Fleming will write to me (c/o the Editor) and suggest a date, I will bring as many enthusiastic motor cyclists as possible. W. S. LUKER.

### GEAR QUADRANTS AND KNEE-GRIPS.

Sir,—I was interested in "Ixion's" complaint of the gear quadrant on his Sports Sunbeam being in the way of his knee. This, I notice, is a common fault on eight out of ten machines, either with the quadrant or the gear lever.

I pointed this out to one manufacturer at the Show, remarking on the impossibility of fitting knee-grips. He replied that knee-grips were useless, liable to give one about fifty compound fractures of the thigh and pelvis, and that he never used them, even for speed work; so I came to the conclusion that the people who make grips either do it for ornament or to protect the tank.

The manufacturer then went on to say that of course if I specially wanted the lever moved I could have it put anywhere! SPORTS MODEL.

*Owing to the exceptionally heavy demands on these pages, letters should be as brief as possible and, as a rule, should not exceed 200 words.*

## REAR LIGHTS FOR ALL.

Sir,—In answer to Mrs. Margaret M. Stancer, I have been motor cycling and car driving for the last fourteen years, and even in the early days did not dispense with a rear lamp on my motor cycle, as I found that at night I rode very much more slowly than in the day, a thing which does not happen to the majority of car drivers.

Until the price of petrol and the present taxation prevented me, I used to drive a 24-40 h.p. Fiat, and found that after nightfall I invariably overtook the majority of motor cyclists, who do not seem to ride after dark at a speed of more than 20-25 m.p.h. J. M. CLEMENTS.

Sir,—To my mind it is imperative that *all* vehicles, either fast or slow moving, should carry rear lights.

The condition of many of our main roads is, at present, sufficiently vile to necessitate even a fast solo rider slowing down if he wishes to retain his saddle, and it is then that he is likely to be overtaken by a car, which, on account of its size and extra springing, could hold the road at a fairly good speed.

A friend of mine was recently "rammed" in the rear owing to his rear light having "bobbed" out, and I fancy he would exhibit half a dozen red lights rather than have to again trundle his machine along with a buckled wheel and a damaged mudguard. CALTHORPE.

Liverpool.

Sir,—I, amongst hundreds more, cannot but agree with Mrs. Stancer that those who press for a new law to compel solo machines, etc., to carry a rear light are working in opposition to the interest of motor cyclists (but not in opposition to the trade).

If any motor cyclist is at all nervous, what prevents him or her carrying a rear light? But do not make it compulsory.

E. A. C. MOON.

Sir,—I am surprised that a number of your recent correspondents consider slight personal inconvenience the chief factor in the above question. Surely a broader view should be taken.

There is no doubt that vehicles without rear lights are a source of danger; the risk is, of course, greatest on wide vehicles whose front lamps are hidden from the rear, especially when these do not give an extensive ray; pedal cycles without rear lights are undoubtedly dangerous, owing to the feebleness of their front lamps (I have had several very narrow escapes from collision when overtaking such machines). In the case of motor cycles, which travel faster and are better lighted in front, the risk is much less, but it is nevertheless existent, and the presence of such machines on the roads is a source of anxiety to drivers of other fast vehicles.

The rider who says he is prepared to take the risk of travelling without a rear light, and should be allowed to please himself, must remember that, in the event of a collision, the driver of the overtaking vehicle suffers as well as himself.

Our laws are framed for the common good and the safety of the public, and all who agree with this principle should support "rear lights for all."

As regards the snag of inconvenience, this is negligible on a machine with dynamo lighting, while on motor cycles not so equipped and on pedal cycles a dry battery rear light can be easily and cheaply fitted, and will give adequate and reliable illumination at a low cost.

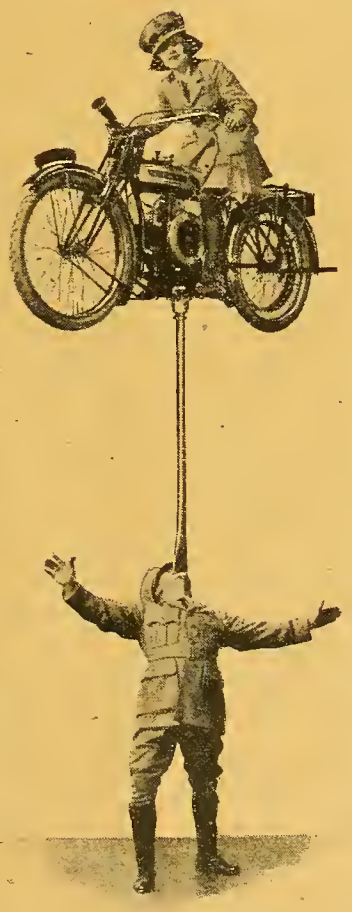
C. A. GOSLING.

Sir,—With reference to the letter over the name of Mrs. Margaret M. Stancer, we regret that she fails to see the necessity for all vehicles to carry rear lights. If she had been in the habit of doing much night riding we feel sure that she would have different views on the matter. In a brilliantly lighted town there may not be such a necessity for rear lamps as there is when one gets away from the lights, but obviously one cannot make any distinction. Considering the ever-increasing stream of traffic we come in contact with, we feel that the motto "safety first" should be the guiding principle. As motorists we belong to a large body, and we should endeavour to obtain "the greatest good for the greatest number," which often means the sinking of self. We should be ready, and willing, to suffer a little inconvenience if, by so doing, the community may be benefited.

With reference to dynamo lighting outfits, the writer, in common with many others, is not the happy possessor of one, but with a separate generator, a reliable rear lamp (such as a Lucas), and cleanliness, trouble is reduced to a minimum.

Your correspondent is of the opinion that because she has never heard of a motor cyclist being run down in the dark, such things have never, nor will ever, occur. We should like to assure her that we are out in the interests of motor cyclists every time, but in common fairness, if we claim that bicycles and other vehicles should carry rear lights (and she must admit that this is necessary), surely we should do likewise.

For the Gloucester M.C. and L.C.C.,
FRANK R. WARE,
Hon. Secretary.



BALANCING—IN A NEW SENSE.
Quite a remarkable feat of balancing a Douglas motor cycle and rider has been introduced to the music-hall stage by "The Airos." When the picture, which is quite genuine, was taken, the engine was running, albeit misfiring, at about 500 r.p.m.!

## LUMINOUS SPEEDOMETER DIALS.

Sir,—May I inform "Viz" that I find that after looking hard at a white road lit up by a large acetylene head lamp it is very difficult to see a luminous speedometer without careful examination, which takes too long for fast night work. The only satisfactory method I know of is to have a small bulb, shaded, throwing its light down on to the speedometer. The trip and total mileage can be seen this way, but I fear it would not be easy to put luminous paint on the revolving figures, and even then they would be very hard to see, owing to their comparative incarceration inside the speedometer during the day. A. O. RUSSELL.

## "GETTING A PINT INTO A QUART POT."

Sir,—"Ixion" moans about toolbags. Well, my machine has strap fasteners which, although allowing an unscrupulous garage assistant to "borrow" my patches and tools, does not come open on the road.

*But* what of their size? The near side bag is fully occupied by the tool roll. The other contains a tyre outfit, one plug in case, spare belt fastener, and a piece of rag 6in. × 6in. It wouldn't hold a collar-stud more.

Now we turn to the maker's handbook, and find the following spares suggested:

(1.) Two valves complete (inlet and exhaust).
(2.) Two plugs.
(3.) Two valve-cap washers.
(4.) One magneto carbon brush and spring.
(5.) Spare belt fastener and few short pieces of belt or complete spare belt.
(6.) Small supply of valve springs, cotters, caps, screws, and nuts.
(7.) One fork spring.
(8.) One exhaust valve rocker.
(9.) One chain (engine to camshaft), spare link and spring clip.

A regular perambulating garage; but no suggestions for carrying the goods. One of these days I shall break a valve ten miles from anywhere; then I shall get wild and buy a two-stroke. J. HEASMAN.

### UTTERLY AMAZING SPEEDS.

Sir,—I cannot waste your valuable space in quibbling over mere words, so will not refer to Mr. Harris's letter in your issue of March 2nd beyond reminding him that the quotation in my letter was from an advertising bulletin, and not from the editorial columns of the American "trade" paper, *Motor Cycling and Bicycling*, as he seems to infer. Further, it was the Henderson demonstrator who pronounced the tyres too soft for speed work, and did not do so till after he had made an unsuccessful effort to improve on Mr. Fowler's speed.

The average English motor cyclist is, unfortunately for Mr. Harris, a great sceptic where "paper" speeds are concerned, and a believer in the *Facta non verba* motto. I would therefore suggest to Mr. Harris that he take steps to allay any doubts which may exist in this country as to the veracity of the bulletin in question. In fact, I am surprised that he has not before this staged a series of tests over here on the lines of those stated to have taken place with a Henderson machine in America.

A standard machine in full touring trim is said to have been ridden some 200 miles over mountain roads, and then on arrival at its destination, when taken on the track, without any adjustments, to have reached a speed of 90 m.p.h. We have no mountains handy, but no doubt a 200 mile course in Surrey, similar to that used for the Sopwith Cup Trial last October, could be mapped out for Mr. Harris, after completing which he could proceed to show us 90 m.p.h. over the flying mile at Brooklands.

G. F. RANDALL.

[This correspondence is now closed.—ED.]

### SPEEDS OF TWO-STROKE LIGHTWEIGHTS.

Sir,—Re "Ixion Villiers'" query as to the gear used on the Portsmouth Road, it was 5—1. I must admit I had favourable conditions. It was in the late summer, there was no wind, and in the evening. As to Mr. Grubb's challenge, I accept, but would like to know whether the machines are to be tuned or as ridden every day. As to the date, I leave that to him. I will avail myself of the minute start, and then if I beat him, have an equal start.

I have stated that my speeds were by speedometer (and I have no reason to doubt its accuracy), but for a lap at Brooklands I averaged 42 m.p.h., with a flying start of 25 yards; this was by watch timing and witnessed.

W. M. COUPER.

### VARYING GARAGE CHARGES.

Sir,—Referring to the leader in your issue of the 16th ult. in which you say that seaside garages are most often complained of in regard to excessive charges, I have made inquiries as to the charges of the garages in Southport, which is one of the largest seaside resorts on the West Coast.

In none of the lists of garage charges I have obtained (and there are some of the finest garages in the North of England in Southport) can I find a charge of 1s. 6d. for a temporary storage of a sidecar outfit, or of a charge of 1s. 6d. per hour for motor cycles. The highest charge for the former is 1s. per day (and there are some garages which charge lower than this) and for the latter 6d. per day. From this I hope you will agree that, so far as Southport is concerned, the complaint of excessive charges for garage accommodation cannot be sustained.

ROWLAND HILL,
Sec. Southport Motor Club.

### THE LURE OF THE FREAK TRIAL.

Sir,—I was very pleased to see your leader of the 23rd ult. *re* freak trials, as I am greatly in favour of this type of competition.

Something like twelve years ago—after many years of hard riding—I began to find the main roads rather tedious when mounted on an ordinary touring 'bus, so took to the hills, dales, and, in fact, everywhere where I could possibly wangle my varied mounts along. Practically every week-end since ("Dora" permitting) I have been on the "rough stuff" over scores of miles where no other motor cycle ever—shall I say "trod," ridden over some most impossible-looking places when making a bee-line, but have yet to break (touch wood) a single thing on any motor when so doing.

I have only one grouse about the freak trials: the 20 m.p.h. is much too high for this class of riding. I have won premier awards over the "rough stuff," and I know risks to both neck and machine must be taken (particularly by a nervous or inexperienced rider) if one keeps up to schedule. It is utterly impossible to keep to 20 m.p.h. on some machines, and riders of the latter turn up for a competition blissfully ignorant of the fact that *they have not a sporting chance*. I shall welcome the day when the average is set to nearer 10 m.p.h. over a real freak course. We shall then draw new riders into competitions, and everyone will get a chance. After all, 10 m.p.h. is racing—on a freak course—compared with 20 m.p.h. on a main road. I belong to one club which fixes the limit at 18 m.p.h.

In conclusion, I beg to voice the opinion that cross-country riding is one of the most fascinating games extant; and if "Zenith Solo" lived nearer to our beautiful Derbyshire hills I would undertake to act as his guide to prove my contention—if he can really ride his machine.

Sheffield. AMPHISTRATUS.

### TWO-STROKE EFFICIENCY.

Sir,—In reply to "Curious," in your issue of February 23rd, perhaps I should have said "must not be much more than 250 c.c." I may point out that the volume of a cylinder varies as the square of the diameter, whilst the cooling surface only varies as the diameter. With any normal stroke-bore ratios the ratio of cooling surface to volume is therefore a constantly decreasing one with increasing capacity. There is thus an ultimate limit of size beyond which the temperature of the cylinder becomes too high. It has been proved that extensive fins have little effect in extending this limit (so far as cast-iron cylinders are concerned at any rate). This limit is at present in the neighbourhood of 250 c.c. for two-strokes. In four-stroke machines, where the frequency of working strokes is halved, the efficient limit is doubled, and becomes about 500 c.c.

"Curious" will find that all the important speed records for two-strokes are held by machines in the 250 c.c. class. Above this class the records are held by four-stroke machines of 350 c.c. and 500 c.c. (not by the 600 c.c. machines). The Sports Sunbeam and Norton are 500 c.c. (about), not 600 c.c. The above remarks apply only to machines for solo use or for speed. There is a certain field for the 350 c.c. two-stroke of lower compression for slogging work with a sidecar where a machine simple and cheap in first cost is required, and where slightly higher petrol consumption is not objected to. In the writer's opinion, however, these large single-cylinder two-strokes will soon give place to high efficiency side-by-side twin-cylinder two-strokes in the same way that the big singles (four-stroke) of 650-750 c.c. in vogue a few years ago for sidecar work have given place to V twins.

MARY C. JENNISON.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

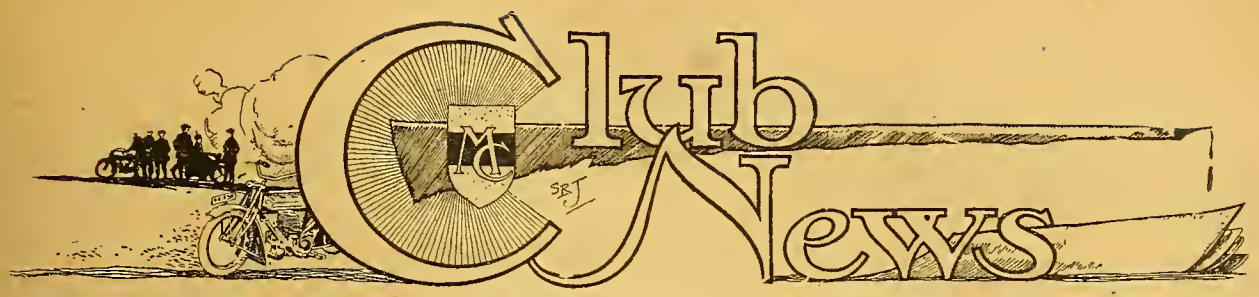
**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view.
Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "IXION," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.



### Stafford and District M.C.C.

About 120 members and friends attended a ball held in the Assembly Rooms, Stafford, on February 22nd. There were many novel features in the arrangements, and the event proved an outstanding success.

### North Wales M.C.C.

On the 21st ult. the club held its second annual whist drive and dance, at the County Hall, Denbigh. The event was a great success, there being over 200 present, and dancing was continued until 2 a.m.

### Preston M.C.C. (Brighton).

On the 20th ult. a club as above was inaugurated. It was in every sense a satisfactory meeting, both social and competition runs for the ensuing season being discussed. More members, however, are required.

### West Birmingham M.C.C.

There was a good attendance at the annual general meeting, held at the King's Head Hotel, Edgbaston, on the 24th ult. The fixtures for this year were discussed, and a programme, to comprise 25 runs in all, decided upon. It is intended to include an inter-club trial and an open reliability trial.

### Nottingham and District M.C. and L.C.C.

Organised for the East Midland Centre A.C.U. by the Nottingham Club, a recent night trial was voted a big success; and permission has been asked to hold a further night trial on April 1st. The route was 138 miles, and lay through many of the large towns in the district, Newark, Mansfield, Chesterfield, Matlock, Derby, Leicester, and Loughborough being visited. A 20 m.p.h. schedule was set which proved a stiff test when off the main roads. Slack Hill, N.E. of Matlock, was observed, acetylene flares being used on the worst portions, where several failures occurred. Seventeen competitors only finished the course. The following were the winners of the special awards:

Lightweight—W. G. Tollington (2½ Sun Vitesse).

Solo—S. S. Debenham (4 Campion).

Sidecar—I. Cohen (10 Campion sc.).

Gold medal certificates were awarded to:

F. Horberry (3½ Douglas).

W. Haslam (3½ Norton).

G. H. Alcock (8 Brough Superior).

F. Sissons (3½ Norton).

S. Matts (3½ Rover) (9 years old, single gear).

C. A. Clarke (3½ Sunbeam sc.).

### Bloxwich and District M.C.C.

Motor cyclists willing to act as observers in a trial to be held in the Gloucester and Stroud district on Easter Monday are asked to communicate with the hon. secretary, Mr. H. R. Millington, 29, Wallington Heath, Bloxwich.

### North London M.C.C.

Clubs which have not received a circular letter regarding the North London Rally on Whit Monday should, if they are interested, communicate with the secretary, Mr. Alan W. Day, "Claremont," Ballard's Lane, Finchley, London, N.3.

### Lewes and District M.C.C.

The annual general meeting took place on the 21st ult. at the White Hart Hotel, the Mayor of Lewes presiding over a fair attendance. The accounts showed a cash balance in hand of £3 8s. 7d. Officers for 1922 were elected. There were some changes in the committee, and two lady members were elected. Mr. E. Jenner, 57, Cliffe High Street, Lewes, is the hon. secretary.

### North-Eastern Centre A.C.U.

The first meeting was held at the Y.M.C.A., Sunderland, on Wednesday, the 22nd ult. Mr. Geo. G. Heath, of 24, Cambridge Terrace, Gateshead, was elected hon. treasurer and secretary. Delegates from seven of the eight affiliated clubs were in attendance, and arrangements were made to hold a centre team trial on May 22nd.

### North-Eastern Automobile Association.

The annual dinner, the first since the war, was held following the annual meeting in Tilley's Restaurant, Newcastle. Mr. D. Balfour took the chair, supported by Mr. J. E. Hodgkin, the secretary, Col. C. B. Palmer, C.B.E., D.L., Mr. J. F. Maling, Mr. C. V. Swan, and Mr. C. J. Dymond.

Amongst the guests were the Lord Mayor of Newcastle (Alderman R. H. Milligan), the Sheriff of Newcastle (Councillor Jas. Lunn), Mr. J. A. Bean (Northumberland County Surveyor), Mr. A. E. Brookes (Durham County Surveyor), Mr. J. Davidson (Morpeth Borough Surveyor), and Mr. F. Smillie (Tynemouth Borough Surveyor).

During the course of the evening Mr. A. E. Brookes, replying to the toast, "Local Authorities," made some interesting remarks on the local roads. Motorists, he said, desired ideal surfaces, and they would have to pay for them. Personally, he did not think that the light vehicle did the damage to the roads, and also that the heavy vehicle did not pay in proportion to the damage it did.

### Neath and District M.C.

It has been decided to hold the first speed trials on Porthcawl sands on Easter Monday, April 17th. Entries close on April 11th.

### Sale and District M.C.C.

All particulars of this newly-formed club can be obtained from the secretary, Mr. E. C. Bramley, "Landfield House," Hesketh Road, Ashton-on-Mersey.

### Proposed West Herts M.C. and L.C.C.

It is desired to form a club covering Watford, Rickmansworth and district; all interested should communicate with Mr. H. H. Lewis, 18, Church Street, Rickmansworth.

### Essex M.C.

Members are reminded that entries for the fourteenth annual hill climb close first post on Monday next. Valuable silver cups are being given on this occasion; entry forms and particulars can be obtained from the hon. secretary, Mr. Ernest J. Bass, 40, Chancery Lane, London, W.C.2.

### Horsham M.C. and C.C.C.

It has been decided to hold the opening run as a reliability trial for the president's cup on April 9th over a 70-mile course within a radius of twenty miles of Horsham. It has also been arranged to run the captain's surprise run on April 30th. The secretary is Mr. A. C. Quick, Queen Street, Horsham.

### Berwick and District M.C.

Mr. J. Elder, the treasurer, reported at the annual general meeting that the organisation had a balance in hand of £37, but when, he stated, the prizes won during the last season had been paid for, the balance left would only amount to £2.

Councillor Alex. Darling was appointed president, Mr. G. Rowley chairman, Mr. W. Dodds secretary, and Mr. F. Moon treasurer.

### Western M.C.C. (Glasgow).

At the third annual meeting held at the club headquarters, 250, Great Western Road, on February 25th, reports were submitted showing the club to be in a very prosperous condition, both financially and as regards membership. Prospects in regard to the proposed club-house are becoming definite, and an announcement may be made very soon in this connection. Last year £105 was expended in awards, besides numerous prizes donated by friends of the club, and this year it was indicated, competitions and prizes will be more numerous than ever.

*(Club News is continued on page 315.)*

# Current Chat

## Times to Light Lamps.

| | | | |
|---|---|---|---|
| Mar. | 9th | ... ... | 6.51 p.m. |
| ,, | 11th | ... ... | 6.55 ,, |
| ,, | 13th | ... ... | 6.58 ,, |
| ,, | 15th | ... ... | 7.1 ,, |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### More Daylight.

The days are drawing out rapidly. We shall soon be able to take evening runs without troubling about lamps.

### Royalty on Two Wheels.

One of the latest adherents to the scooter is H.M. the Queen of the Belgians, who has purchased one for the purpose of making short journeys.

### Universal "Safety First."

Not only in England but in other parts of the world is the racing helmet becoming compulsory in all speed events, the latest country to fall into line being Italy.

### Driving a Pair.

There is at least one advantage in the foot-controlled clutch. We recently saw a B.S.A. rider taking home his pedal cycle, which behaved quite sedately by the side of its power-propelled brother.

### To Land's End Competitors.

Considerable assistance is being given to the organisers of the London-Land's End Trial by the Slough Transport Co., Ltd. Three minutes' walk from the garage is the company's canteen, at which a special supper will be served, price 3s. 6d. Coupons for this may be obtained in advance from Mr. F. T. Bidlake (trials secretary of the M.C.C.), 84, North End Road, Golder's Green, London, N.W.11.

### Sidecar Firemen.

Paris firemen are now making use of motor cycles and sidecars for first aid in extinguishing fires. The machines are Harleys with a special two-passenger sidecar and provision for carrying hand extinguishers. At present these machines are only being used by the central brigade, and have been adopted with the object of getting firemen on the scene of an outbreak before the main engine arrives. Probably the men on the motor cycle will not often be able to extinguish the fire with the hand apparatus at their disposal, but the five or ten minutes they are expected to gain will prove exceedingly valuable in preparing the ground for the arrival of the main force.

### Consecutive Numbers.

The Committee of the M.C.C. has decided that not more than three riders riding the same make of machine in the London-Land's End run on April 14th may have consecutive numbers.

### Delivery by Aeroplane.

Sent at midday from Paris in a Goliath aeroplane, a Gnome and Rhone motor cycle was delivered to the Brussels agent within six hours, including passing through the Customs. It is stated that the cost of transport was less than by express train.

### Hard Riding.

Although the conditions of the M.C.C. Land's End to John-o'-Groat's run will not be severe, so far as the regulations are concerned, it will nevertheless be a hard ride. On main roads all the way, there will be few severe hills, Amulree being perhaps the most difficult. As a physical trial, however, the strain upon the riders will be considerable. A distance of 240 miles is to be covered on the first day, 230 miles the second, and 312 the third, which we believe is the longest day's run in any English trial yet organised.

## Special Features.

THRO' IRELAND ON A MOTOR CYCLE

DETECTING FAULTS IN A LIGHTING SYSTEM.

ROAD TEST OF SOLO "BIG TWIN."

### Motor Cycle Longevity.

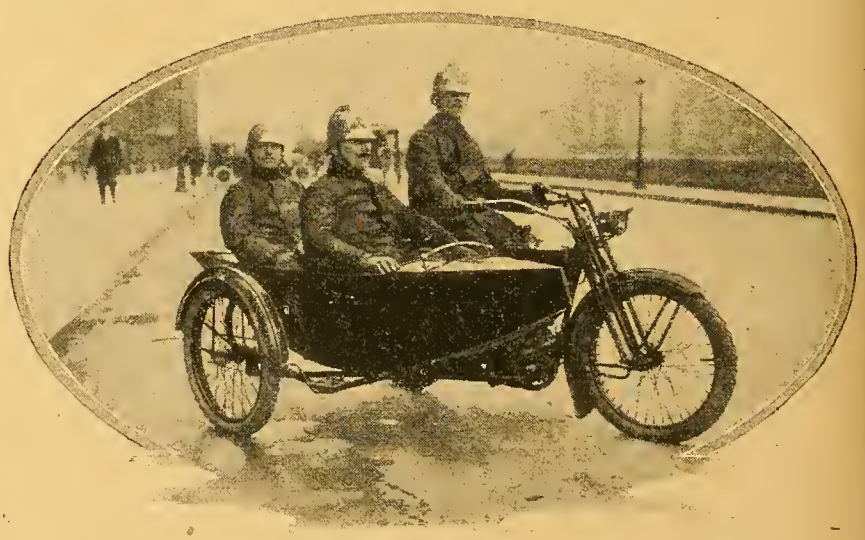
Some sensation has been caused among motor cyclists in Sweden because an important economy competition organised by a Swedish newspaper was won by a ten-year-old belt-driven American motor cycle.

### A Sign of the Times.

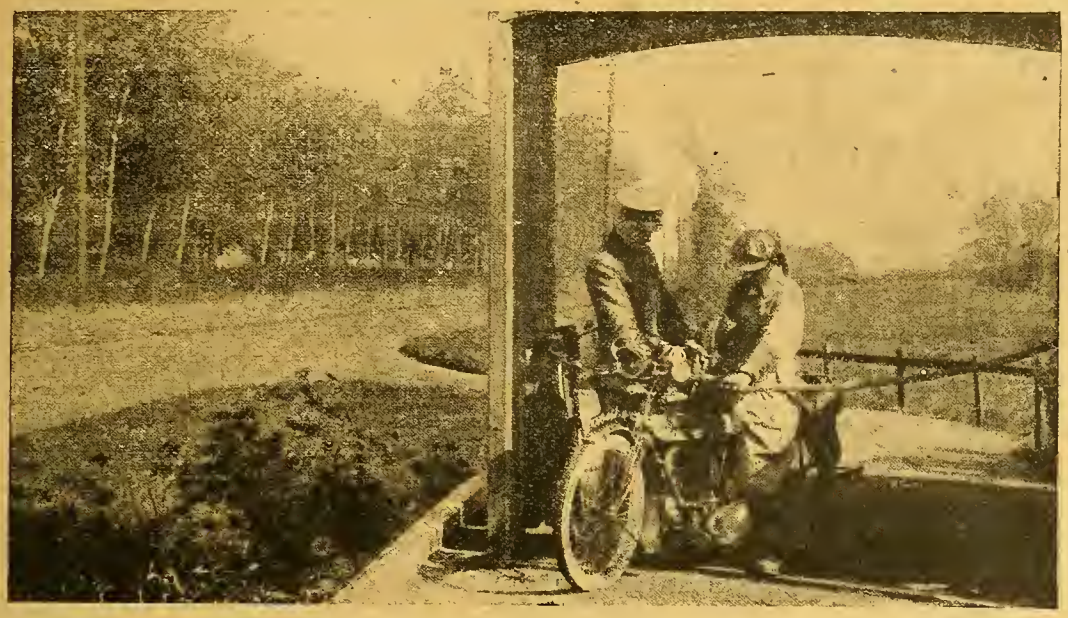
Sunday School prizes used to take the form of such high-brow literature as "The Good Boy's Reward"; it may come as a shock to some that at a recent prize distribution in a Midland Sunday School one of the books chosen was "Motor Cycles and How to Manage Them."

### Construction of Arterial Roads.

Mr. Neal, replying in the House of Commons to Sir Thomas Polson, said that the cost up to January 31st of the new arterial, circular and by-pass roads, for the construction of which the Roads Department of the Ministry of Transport was directly responsible, was £371,000. A sum of £1,261,000 was still held in reserve in the Road Fund at that date towards the cost of these works.



One of the two-seater Harley-Davidson sidecars used by the central fire brigade of Paris.



*An A.A. Member "fills up" at an A.A. Motor Fuel Station.*

**EVERY motor cyclist benefits, indirectly, from the work accomplished by the Automobile Association in safeguarding the interests of the motoring community.**

**The funds, which enable this national work to be performed efficiently, are provided by A.A. members.**

**Every non-member, therefore, owes a duty to his fellow motor-cyclists who are members. That duty is to join the A.A.**

**Send a postcard, to-day, to the Secretary, who will forward an illustrated booklet describing A.A. Road Service together with an application form for membership.**

**This will not commit you to joining the Association, but it will convince you that you are missing a good deal by not doing so.**

# ROAD SERVICE

The Road Service provided by the Automobile Association is the most comprehensive offered by any motoring organisation in the world. This Service is placed at the disposal of motor-cycle members in return for a subscription of £1.1.0 a year—less than 5d. a week.

It includes free assistance on the road by A.A. patrols, free use of roadside telephone boxes at any hour of the day or night, and free help by the A.A. men in charge of road service outfits.

Other benefits are free legal defence and advice, home and foreign touring assistance, expert engineering advice, officially-appointed repairers, A.A. hotels, etc.

This Service meets the requirements of every reasonable motorist and, to-day, satisfies more than 160,000 members.

If you are not already a member of the Automobile Association you can join with the assurance that A.A. Road Service will satisfy *You* and that full value for your subscription can be obtained in direct benefits.

## THE AUTOMOBILE ASSOCIATION,

# NATURE'S MIXTURE OF PETROL AND BENZOL

Many motorists prefer running on a mixture of petrol and benzol to using either spirit separately. "Shell" is *Nature's* mixture of petrol and benzol, perfectly combining the rapid vaporising qualities of the best petrol with the non-pinking quality of benzol. "Shell" Motor Spirit, ALONE OF ALL PETROLS, was extensively used during the war, *in precisely the same way as benzol*, for the production of those particular aromatic hydro-carbons which form the base of T.N.T. and other high explosives, hence its greater mileage and power and non-pinking quality.

# SHELL

## Over 4 miles for one penny

The McKenzie Lightweight is the most economical motor cycle proposition yet formulated. Averaging 180 miles per gallon, *maintaining* 25 M.P.H. on the level, easily topping all ordinary hills, and giving sound, reliable service all round. Built at the famous Hobart Coventry factory from high-grade materials on the mass production principle. The

# McKENZIE

**Safety Lightweight Motor Cycle**

is the cheapest *reliable* motor cycle on the market to-day. It weighs only 75 lbs., is fitted with Fellows Magneto, "Vici" Carburetter, heavy ⅝ driving belt, Clincher tyres, etc. Costs no more than a dependable pedal cycle, yet gives ten times the pleasure and service. Ask your dealer to demonstrate the McKenzie or send a post-card to-day for full details to

### Blackpool Wants a Racing Track.

At a recent meeing of the Blackpool and Fylde M.C. a resolution was passed that a concrete motor racing track would be a desirable feature to include in the plans for the proposed new local park. The South Shore Traders' Association supported the proposal.

### British Successes Overseas.

It is gratifying to note that in the acceleration test held by the East London (S.A.) M.C.C. recently two Triumphs were first and second respectively and a B.S.A. third in the solo class, while in the sidecar class a Triumph was first and a B.S.A. twin third.

### Club's Influence Reduces Ferry Charges.

After prolonged correspondence between the secretary of the Essex County and Southend A.C. (Mr. Maitland Keddie) and the manager of the Midland Railway, the charges for the transport of motor vehicles on the Gravesend-Tilbury ferry have undergone approximately a 25% reduction.

### Observers for Stock Machine Trial.

Observers are wanted on the section of the A.C.U. One-day Trial route from Long Compton to Brooklands, and motor cyclists who would care to undertake this useful work should communicate with Mr. A. J. M. Ivison, "Winton," Victoria Road, Mill Hill, London, N.W.7. The chief points at which they are needed are in the neighbourhood of Oxford, Chinnor, Great Missenden, and Amersham.

### No Wonder!

That we are not keeping in touch with motoring matters unless we subscribe to the "Dixon Hawke" library is the opinion of an anxious reader, who supports his statement with the following extract:

"Vicars got the car along for five miles somehow, anyhow. When they reached the main road, the radiator was red-hot, the piston of two cylinders had seized up, and once the engine was stopped they knew it would not move again."

If one piston attempted to use two cylinders ——!

### 1914 T.T. Winners to Compete this Year.

Six Rudge machines are to be entered by the manufacturers for this year's Senior T.T. Race.

### Inter-'Varsity Climb Postponed.

Owing to the unpropitious weather the inter-'Varsity hill-climb, to have been held last Saturday, was postponed.

### Change to a British Mount.

In Wednesday's A.C.U. Trial H. R. Harveyson, hitherto a very consistent rider of American machines, makes his *début* on a four-valve Triumph.

### Chance for Speed-men.

Speed-men will be interested to learn that a number of the actual machines entered by the B.S.A. Company in the T.T. last year are now available, completely rebuilt and renovated, at an extremely moderate figure.

COMPETITORS IN THE PARIS-NICE TRIAL.

A diminutive power plant, which the driver hopes will propel his machine from Paris to Nice.

### State of the Second-hand Market.

With the approach of longer days and possibilities of more settled weather conditions, the prices asked for second-hand machines are, inevitably, hardening. No great change has, however, taken place since we published, a fortnight ago, a comprehensive table showing the buyer approximately what was available at prices from £20 to £150. The more modern sidecar outfits of 1920 and 1921 are, however, rapidly becoming less common.

### Petrol that Will Not Drip.

"Airo," who balances a Douglas motor cycle and rider on the end of a pole which he holds in his mouth, has great difficulty in complying with the regulations of the authorities concerning the use of petrol on the stage. These regulations demand that the petrol shall not be in a liquid form, and "Airo" utilises a small tank filled with cotton-wool saturated with the fuel. Apparently a special form of wick carburetter could be adapted. Has any reader experimented in this direction? A photograph of the "Airos" appears on page 307.

### In this Issue.

Motor cycling conditions in Ireland are described in an interesting article by a motor cyclist. Page 294.

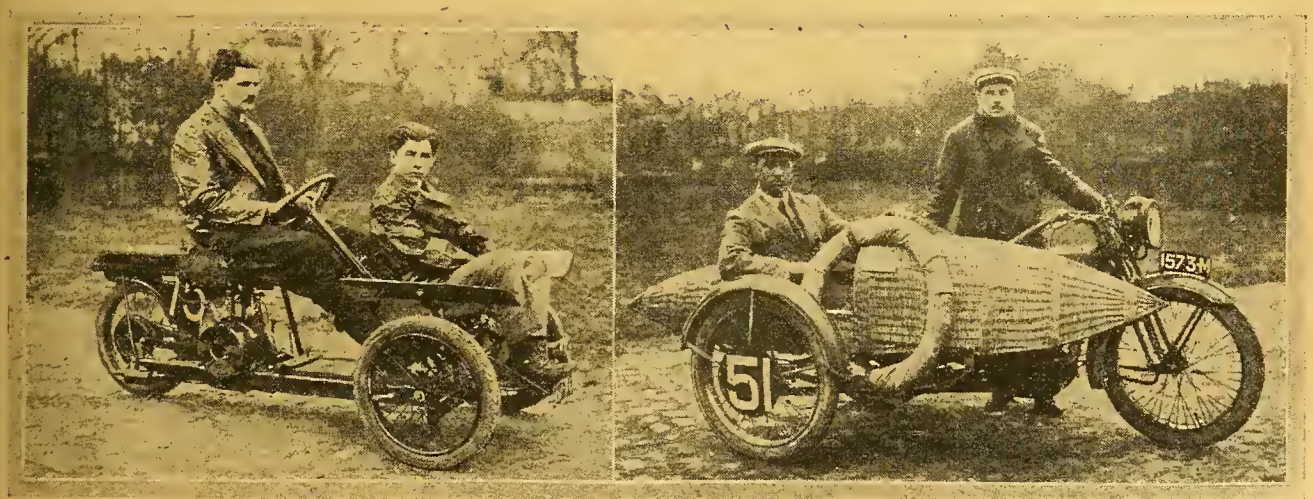
A lady contributor on page 297 deals with the eternal question among motor cyclists of the fair sex!

Detecting faults in a lighting system forms the subject of a practical article on page 299.

Topics of interest to all who own or ride in sidecars are discussed on pages 301 and 302.

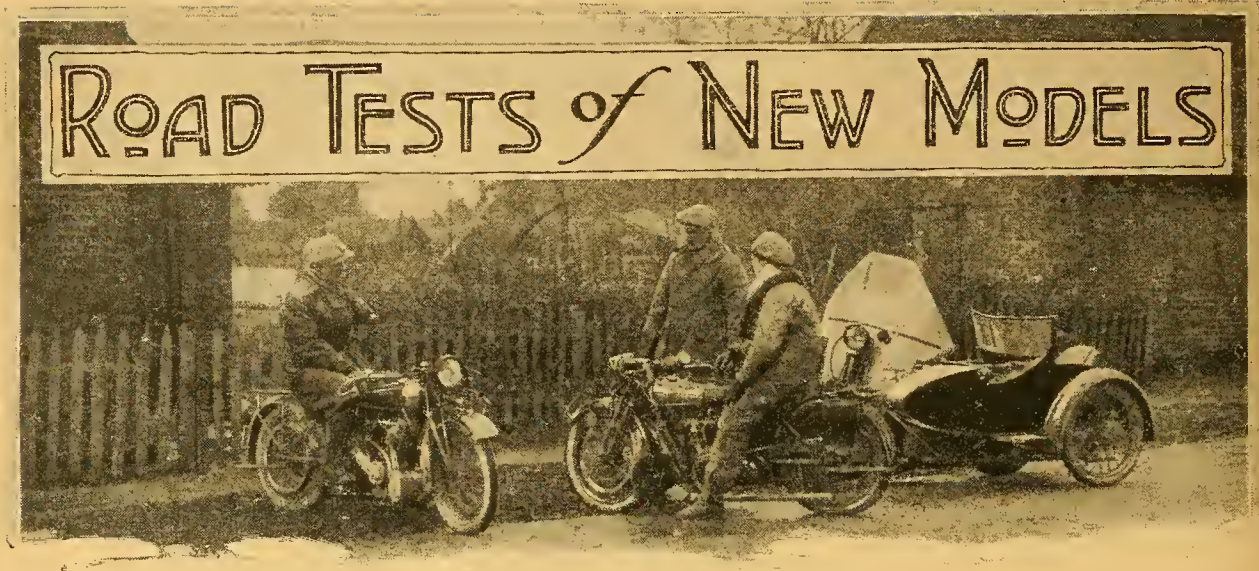
Those who have followed the correspondence on "Sidecar Fuel Consumption Records" will be interested in the several additional letters in this issue; also in the article by Mr. T. W. Loughborough, secretary of the Auto-Cycle Union, on the subject of private trials on page 315.

Following upon Lt.-Col. Brereton's article "Motor Cycles for Boys and Girls," several readers this week give their views on the desirability of young people owning machines.



Two more quaint machines in the Paris-Nice Trial, which started on Wednesday of last week. (Left.) A Monet-Goyon runabout. (Right.) A long cane sidecar attached to a Harley-Davidson.

# ROAD TESTS of NEW MODELS



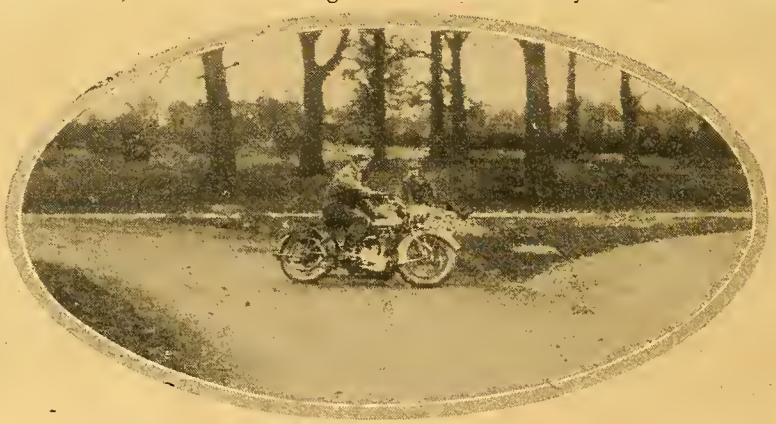
The 8 h.p. Side-valve Brough Superior.

*SPECIFICATION.*

*ENGINE: 8 h.p. side-valve J.A.P. (85·5 × 88 mm. = 965 c.c.).*
*CARBURETTER: Amac.*
*GEAR BOX: Sturmey Archer three-speed, with clutch and kick-starter.*
*TRANSMISSION: ⅝ × ⅜in. chains (protected).*
*BRAKES: Dummy belt rim, front and rear.*
*TYRES: 26 × 3in. Dunlop Magnum (light car type).*
*WEIGHT: 285lb.*
*PRICE: £150.*

QUITE a considerable number of motor cyclists may be regarded as enthusiasts, and of this number a large proportion long to possess a solo mount, well finished in all respects, and capable of high road speeds without apparent exertion. It is for such as these that Mr. George Brough has laid himself out to cater, and his wide experience in sporting trials has provided him with a valuable source of knowledge of the special requirements of this type of rider. A comparatively small output in a specialised line enables him to give personal attention to every machine turned out from the works, and the resulting product is therefore likely to be ideal for the sporting soloist or for use with a light sidecar. Price, of course, must be a secondary consideration, but the Brough Superior compares favourably with machines of its class.

The latest Brough Superior model incorporates the new 8 h.p. side-by-side valve J.A.P. engine with roller bearing crankshaft. This engine is a remarkably "clean" design, and at the outset we may state that, though the machine which we tested had a big mileage behind it, the engine was extremely quiet and was the most effortless and vibrationless V-twin that it has been our good fortune to handle. As regards flexibility and power, it is possible, on the sidecar gear of 4.28 to 1, to crawl through busy streets or to accelerate on open roads to speeds often talked of but seldom accomplished. This without touching the gear lever, and with only reasonable clutch manipulation in traffic. This is due to the wide weight-power ratio and the flexibility and power of the new side-valve J.A.P. engine.



In spite of its power the Brough Superior handles like a lightweight and can be swung round acute "hairpins" with ease.

### Breeding Confidence.

Pulling sweetly and evenly at all speeds, the engine gives one an extraordinary feeling of confidence, which is increased by the excellent balance of the machine, and though the writer had not handled a Brough Superior for over a year, he was immediately at home on the big machine. Even after a stop of some two hours in wintry weather the engine was quite free and started easily, ticking over without fuss or rattle. A thirty mile run at speeds best left to the imagination seemed to improve the general qualities of the engine

rather than otherwise, and on every occasion on which it was employed the machine behaved so admirably that our parting was regretful.

It is a difficult matter to find a hill with a gradient sufficient to test the powers of such a mount, and we had to content ourselves with intentionally placing the machine at a disadvantage with a view to discovering its true virtues. As an instance of this, the Brough Superior was driven up a slope of 1 in 9 dead slow on top gear, yet while still on the gradient a touch of the throttle caused the machine to accelerate rapidly and without a symptom of hesitation. Again on a trip through devious and twisting byways we intentionally took acute corners on greasy roads without changing gear. In every case a little clutch slip was sufficient to ensure a safe turn and rapid acceleration. If, however, under such circumstances, one drops into middle gear, as all good riders should do, the "get away" is terrific, yet perfectly smooth.

### Transmission and Gear Box.

Any tendency to harshness in the all-chain transmission is effectively damped out by the cush rear hub; and a recent modification of the front chain guard provides for the protection of both top and bottom chain runs, though the centre part is left open to facilitate adjustments or repairs. Clutch and gear box are of the usual Sturmey-Archer type, and well up to the power of the big engine.

One cannot help admiring the neat way in which so large an engine is housed in so small a frame without a suspicion of overcrowding, and on riding the big "eight" one has a sensation of bestriding a handy lightweight with the power and road-holding qualities of a big machine. The three-inch tyres attend to the rider's comfort, and are materially assisted in this respect by the Montgomery leaf spring fork and a large and comfortable saddle, while the steering angle and trail are the result of considerable experimental work.

Certainly these experiments have been worth while, for we can testify that the Brough Superior handles well in grease and over loose stones, a test which has proved too much for many an otherwise excellent machine.

### Detail Criticism.

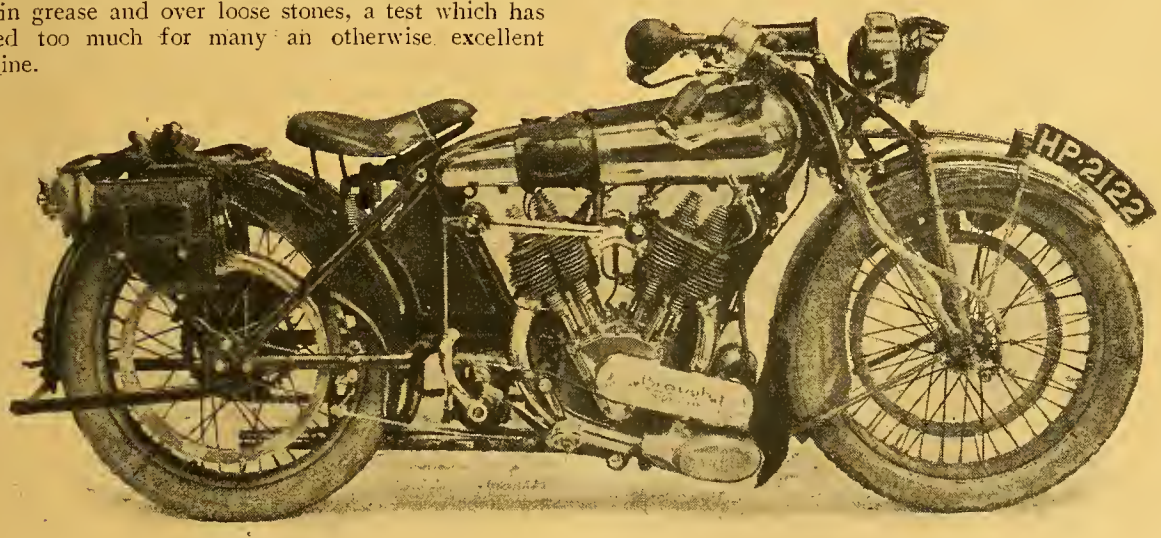
It is not only in points of major importance that the Brough Superior excels, for every detail is carried out with care, and the finish is superb. Only two small criticisms occur: (one), that the finish is a trifle showy for the every-day rider (yet the plated tank cleans up easily and satisfactorily on account of its smooth and rounded shape, and have we not already suggested that most motor cyclists are enthusiasts?); (two), that on the actual machine we tested the steering lock was rather limited. We hear, however, that this point has already received the attention of the designer, and that no future machines will suffer from this slight defect.

Mudguarding is good, the brakes are sensible—especially the parallel action rear—the tool-bag behind the saddle tube is ample in capacity, and is in the correct position, and the handle-bar operated oil pump is neat and very convenient.

### On the Smaller Model.

The fates have decreed that our road tests of this particular make shall be accompanied by snow, and the last occasion was no exception to the rule. This provided us with ample opportunities for testing the machine under all conditions of slush and slime, which it survived with credit, but the inclement weather somewhat curtailed our experiences with the smaller M.A.G.-engined model. In spite of this we were able to verify the fact that the 6·5 h.p. M.A.G. (72 × 90 mm. = 748 c.c.) is a very sweet-running engine of no mean performance, and it is sufficient to remark that the rest of the machine is almost identical with its larger brother. Its weight, however, is 25lb. less, and its price is only £125.

In conclusion, there is just one word of warning which should be issued with every Brough Superior. The comparative novice should insist on an accurate speedometer, for in spite of the fact that the machine will run slowly and steadily, so smooth is the engine and transmission, that one is more than likely to find that one's actual road speed is nearly double the intended figure.



The side-valve 8 h.p. Brough Superior. Note the Montgomery forks. The pannier tool bags are extra fittings.

# THE A.C.U. AND PRIVATE TRIALS.

## The Position of the Governing Body and Private Motor Cyclists where Unofficial Tests are Concerned.

*In our correspondence pages this week there appear several letters relating to a reader's proposed Sidecar Fuel Consumption Test. These are the outcome of correspondence, which was published in the issue for February 23rd, between Mr. T. W. Loughborough, secretary of the Auto-Cycle Union, and Mr. Booth, the self-appointed organiser. Many private motor cyclists, unattached to any club, appear to regard Mr. Loughborough's intervention with surprise, and, with a view to placing before our readers the governing body's position respecting unofficial trials, we invited the A.C.U. secretary to reply to his critics concurrently with the publication of their letters.*

THE whole of the objects for which the Auto-Cycle Union exists may be expressed in two words—the encouragement of motor cycling. The correspondence addressed to *The Motor Cycle* under the heading of Sidecar Fuel Consumption Tests indicated either that the A.C.U. has forgotten its *raison d'être* or that Mr. Booth and his sympathisers have misunderstood my letter of warning given in *The Motor Cycle* of February 23rd. In the second paragraph of that letter I pointed out that "such a competition"—an open petrol consumption test—"cannot be held without infringement of the rules of the Auto-Cycle Union." I did not say it could not be held under any conditions. The Union has no power to stop motor cyclists holding competitions, neither has it the least desire to do so. On the contrary, it welcomes the interest which Mr. Booth's proposal has stirred up.

What, then, was the object of my letter? It was written because it had been published far and wide that Mr. Booth, who had originally contemplated a private test of the fuel consumption of sidecars, had now decided to throw his competition open to all makes of sidecar outfits and a limited number of solo machines. The natural inference is that the results of such a competition might be given equal publicity, in which case Open Competition Rule No. 3a would in all probability be infringed, and it was only fair to warn Mr. Booth of the risks he might be incurring.

### Obtaining Extensive Advertisement.

This is the rule in question:—

"Any owner, manufacturer, dealer, agent, or driver, or other person taking part in or directly connected with any Trial or Competition, not being an Open Competition under these Rules, *and obtaining extensive advertisement therefrom*, shall be deemed to be guilty of a breach of these Rules."

This is a most important rule, framed by motor cyclists in their own interest. A little reflection will show that without such a rule competitions would lose most of their value, and it would be impossible for *The Motor Cycle* to write such a leading article as appeared on February 16th, when it was said, and said truly, that success in a leading British reliability trial is accepted as authentic the world over.

Every sport must have its governing body. When, as with motor cycling, there is not only the sporting interest, but also an important commercial interest attaching to the results of competitions, the necessity for a strong and impartial governing body is obvious. Motor cycling in this country is governed not by the trade, but by an association of private enthusiasts who have no axe to grind, and whose one object is the encouragement of the sport and pastime. Its authority is purely moral, and the measure of its influence is the support given it by the users—not the manufacturers—of motor cycles. The only penalties it can inflict are the withdrawal of any privileges it has been able to grant, but so loyal and far-reaching is the support given to the A.C.U. by private riders and clubs, by the Press and by the trade, that it is seldom necessary to do more than issue a warning.

### Safeguarding the Public.

Suppose Mr. Booth went ahead with his test—as he is perfectly entitled to—and the results were extensively advertised. What guarantee would the motor cycling public have that the results were authentic?

Once one opens the door to unofficial trials and tests, and permits them to be extensively advertised, not only do official trials lose in interest, but the whole tone of the sport of motor cycling becomes degraded. Furthermore, the "man in the street" loses his one authentic and acknowledged safeguard respecting the claims made by manufacturers of what their motor cycles or accessories have accomplished in open competition with their rivals. Great Britain will no longer be recognised as "*the* arena for motor cycle competitions," and their results will cease "to be reflected and to influence trade throughout the world."

(These concluding quotations are from *The Motor Cycle* leading article in the issue for February 16th.)

T. W. LOUGHBOROUGH.

## T.T. DANCE IN THE ISLE OF MAN.

THERE were nearly 800 dancers at the T.T. masked ball at Villa Marina, Douglas, I.O.M., on Tuesday evening of last week. There was no restriction as to costume to be worn, the only rule being that everyone was to wear a mask. Full advantage was taken of the liberty, and the costumes were of all sorts and descriptions, brilliant reds and yellows contrasting with the more sober, but not less attractive, blacks and whites, with every colour of the rainbow in between. There can be no doubt that this masked ball, organised by the Manx Motor Cycle Club for the T.T. Races Fund, was a brilliant success in every possible way. All but very few were in fancy costume.

# CLUB NEWS (continued from p. 309)

### Berkhamsted and District M.C.C.

April 2nd opens the season with a hill climb. There will be three classes only instead of the Easter Monday run, a 100 miles reliability test will be held on Good Friday. All particulars may be obtained from Mr. H. Mills, 158, High Street, Berkhamsted.

### Public Schools M.C.C.

After the opening run, starting from the Bear Hotel, Esher, at 12.30 p.m. on the 13th inst., the next important meeting will be the Brooklands impromptu race meeting on April 1st, for which the president, Colonel Lloyd, has presented a cup and offered the use of the track free to club members.

### Doncaster and District M.C.C.

"Without co-operation on the right lines, our club will cease to exist," said Mr. L. Callender, the secretary, at the annual meeting held recently at the Red Lion Hotel.

Mr. Callender gave a brief *résumé* of the club's activities during the past year. He referred to the sporting spirit of Mr. J. H. Wilkinson, who, though over sixty years of age, covered the half-mile course during a speed trial in 28⅘s. Under the most adverse circumstances, said Mr. Callender, the club had gone through with a varied programme, which, though successful, might have been much more so if members had supported the events more whole-heartedly.

### Essex County and Southend A.C.

Prizes amounting to £200, including thirty-three silver cups, will be awarded at the club's hill-climb to be held on May 1st. The motor cycle classes are open to members only.

### Proposed Brixton M.C.C.

A preliminary meeting regarding the proposed Brixton M.C.C. will be held at the Light Car and Motor Cycle Engineering Co., Ltd., 26, Tulse Hill, to-morrow at 7 p.m. All local riders are cordially invited to attend.

### Motor Cycling Club.

The annual committee dinner, attended by past and present members of the committee, was held at Pagani's Restaurant on Wednesday of last week. Mr. R. H. Head occupied the chair, and on his right sat Mr. J. K. Starley, the new president of the club, who, in a brief speech, referred to the true sportsmanship of the club's members.

Among the older guests present were Dr. C. B. Moss-Blundell, Messrs. J. Van Hooydonk, and F. J. Jenkins.

Mr. Van Hooydonk, in the course of an amusing speech, mentioned how the Edinburgh run had been the making of the M.C.C., and that the success of the club was due to a large extent to the fact that its original committee was composed of several members of the North Road C.C. He also paid a tribute to the memory of the late Mr. S. H. Fry.

### Glasgow University M.C.C.

On Monday of last week a hundred-mile reliability trial was held over a sporting course—Glasgow, Balloch, Arrochar, Rest-and-Be-Thankful, Cairndow, Hell's Glen, Arrochar, Drymen, Glasgow, University Union. There were thirty entries. The weather throughout was not unsatisfactory, but a violent snowstorm was encountered on Hell's Glen and the "Rest." Results: Solo (tie).—F. W. G. Penman (4 Triumph) and R. W. Bell (4½ B.S.A.). Sidecars.—N. Ferguson (4 Triumph sc.). Team prize.—Triumph team.

### Darlington District M.C.

Judging by the large attendance at the annual meeting held on Monday night of last week, the club is in a very healthy state, and promises to become one of the leading representative motor organisations in the district. During the past twelve months the membership has increased fourfold.

A comprehensive programme of social and sporting events is being arranged for the coming season, and numerous trophies and prizes are being offered for competition. An application is being made also for affiliation with the Auto Cycle Union in the case of motor cycle members.

In future the club headquarters will be at Northgate Chambers, Crown Street, Darlington, where Messrs. W. Brown and J. J. T. Whitfield, joint hon. secretaries and treasurers, will be glad to meet present and prospective members.

## LAND'S END TO JOHN O' GROATS.

AS already announced in these pages, to commemorate the twenty-first anniversary of the founding of the M.C.C., a run is to be organised from Land's End to John o' Groat's. Preliminary details concerning this are now available, but it must be borne in mind that these are not final, and that the distances mentioned are approximate.

It has been felt that the most fitting way to celebrate the club's coming of age is to confine the run to the only class of motor cycle in existence at the time of the club's foundation; consequently the run will be open to solo machines only; pillion passengers not permitted.

The conditions will be comparatively easy. There will be no hill tests and no non-stop sections, competitors being required only to see that they are not more than 30 minutes late or 15 minutes early at any control.

An innovation is to be made in the method of finding the winner of the cup to be presented by Mr. L. A. Baddeley. The organisers are well aware of the difficulty of deciding as to which is the best performance among a host of gold medal winners, and it has therefore been decided that this cup shall be awarded by vote among those qualifying for the special gold medal presented for the trip.

Order of starting will be different each morning, and no rigid adherence has been made to the classic route. Rather it has been aimed to avoid large towns as much as possible. The following is an abridged skeleton of the journey with the approximate times and distances :—

Land's End, start 6 a.m., Wednesday, July 12th; lunch, Exeter; arrive Cheltenham, 7.3 p.m.: 241 miles.

Thursday, July 13th, leave 7 a.m.; lunch, Nottingham; arrive Barnard Castle, 7.30 p.m.: 230 miles.

Friday, July 14th, leave 5.30 a.m.; lunch, Lanark; dinner, Kingussie (7.45 p.m.); arrive Inverness, 11 p.m.: 312 miles.

Saturday, July 15th, leave 9 a.m.; lunch, Golspie; and arrive at John o' Groats at 5.45 p.m.: 154 miles.

Grand total: 937 miles.

Roads in a semi-flooded state, and intermittent but heavy rain, did not deter enthusiasts of the Coventry and Warwickshire M.C. from turning up for last Saturday's opening run and paperchase.

# NEXT WEDNESDAY'S A.C.U. TRIAL.

## Sixty-two Standard Stock Machines and 52 others entered for the Auto-Cycle Union 1-day Trial.

IN addition to the 62 standard stock machines, of which a list appeared in *The Motor Cycle* of the 23rd ult., there have been further entries of 52 ordinary machines, making a grand total of 114. It will be seen, therefore, that the trial has been well supported. It takes place on Wednesday of next week, the 15th inst., starting from Birmingham (Ward End Works of Wolseley Motors, Ltd.) at 6.30 a.m., and terminating at Brooklands, where the first competitor is scheduled to arrive at 3 p.m. Lunch will be taken at Oxford (10.30 to 12 noon).

The route is given below :

| | |
|---|---|
| Ward End (Birmingham 6.30 a.m.). | Woodstock. |
| | Oxford (10.30). |
| | Wheatley. |
| Castle Bromwich. | Thame. |
| Stonebridge. | Princes Risborough |
| Kenilworth. | Kop Hill. |
| Warwick. | Amersham. |
| Kineton. | Beaconsfield. |
| Sun Rising. | Farnham Common. |
| Wichford. | Slough. |
| Long Compton. | Staines. |
| Neat Enstone. | Brooklands (3 p.m.). |

## A TALE OF A TRAIL.

FOR years past the Coventry and Warwickshire M.C. has combined a paperchase and a speed-judging contest with its opening run. Likewise, for years past clippings from *The Motor Cycle* printing establishment have denoted the trail. This year (the run was held on Saturday) some brainy individual thought of sawdust, and thereby hangs a tale—but not a trail!

The hares, R. Grindlay (7-9 Harley-Davidson sc.) and Eric Barnett (2¾ Francis-Barnett) were duly started, at which time a dark cloud foregathered overhead; the heavens opened and the trail was lost, or nearly so, before the hounds were unleashed. Meanwhile, the hares, having missed the storm, carried on with their bags in blissful unconsciousness of the "washing-out" process which was proceeding and the search with magnifying glasses at every corner by the hounds, thirty-one in number, now, more by luck than judgment, hot on the scent.

They struggled round the lanes, through gates, over cart-ruts, and through fields (the trail becoming clearer running out of the storm zone), and finally, after thirty-six miles of twisting and twirling between the main London-Holyhead road and Warwick, finished on the outskirts of that town, all very late and some very wet. After tea at the Crown Hotel, the results were announced as follows:

1st Solo Machines: Rev. J. M. Philpott (2¼ Velocette), 14 min. 7 sec. late.

1st Sidecars: G. Betteridge (4 Norton s.c.), 7 min. 20 sec. late.

Subsequently the Silver Challenge Cup offered for the club's solo championship in February was presented by the donor, Mr. J. Calcott, jun., to the winner, J. A. Watson-Bourne, who rode a Brough Superior. No one else qualified for an award.

## A NORTON GATHERING.

IN order to celebrate the safe return of Mr. J. L. Norton from his South African tour, the directors of Norton Motors, Ltd., gathered together their agents and a few other friends at the Midland Hotel, Birmingham, on Monday, February 27th. After an excellent dinner, Mr. Shelley, on behalf of the firm, welcomed Mr. Norton in cordial terms, and presented him with a handsome gold watch as a token of esteem. Speeches were limited to two minutes, but in that short time the speakers, without exception, expressed their pleasure at seeing Mr. Norton safely amongst them, and their appreciation of his plucky rides and the benefits which were likely to accrue to the British motor cycle industry as a result of his tour.

Amongst those who spoke were Messrs. Alec Ross, Teage (*The Motor Cycle*), Lycett, McMinnies, Brown, Vernon Brooke, Naylor, Lee Elliott (Norton representative in South Africa), Frank Whitworth, H. Petytt, Victor Horsman, W. H. Hassall, C. A. Vandervell, Mansell, and P. Pike.

In his reply, Mr. Norton gave a vivid idea of the difficulties and dangers with which he was faced, and thrilled his audience with interesting narratives. In addition to those who spoke, there were present such well-known people in the motor cycle world as Messrs. Dan Bradbury, D. R. O'Donovan, P. J. Evans, K. Don, J. Shaw, and L. Broadhurst.

# COLMORE CUP RESULTS.

## Twenty-three Riders make Non-stop Runs and secure Gold Medals. 105 Silver Medals, 23 Bronze Medals, 18 No Awards, 25 Retired.

AS was expected, only 12 per cent. competitors in the Colmore Cup Trial, described last week, secured gold medals. In this event, however, the wiuning of a silver medal was an honour approximating to the gold medal in a normal trial. Therefore the results may be regarded as indicating a satisfactory percentage of successes.

**THE COLMORE CUP.—T. C. de la Hay (4¼ Sunbeam sc.).**

**WATSON SHIELD** for best performance by a single cylinder sidecar.—**T. C. de la Hay (4¼ Sunbeam sc.).**

**LEVIS CUP** for single-geared solo mount.—**G. S. Davison (2¼ Levis), geared 8 to 1.**

**CALTHORPE TROPHY** for machines under 250 c.c.—**R. E. Pugh (2½ Levis).**

**P. J. EVANS CYCLE CAR TROPHY.—P. Yates (10 New Hudson).**

### ARIEL.

A. E. Rollason (3½), *Gold Medal.*
L. Newey (8 sc.), *Gold Medal.*
W. T. Woodcock (3½), *Silver Medal.*
Tom Peck (4½ sc.), *Silver Medal.*
T. F. Blumfield (8 sc.), *Silver Medal.*
C. L. Reading (3½), *Bronze Medal.*
H. Bennett (3½), *Bronze Medal.*

# IDEAS: USEFUL AND INGENIOUS.

## A Selection of our Readers' Home-made Gadgets, with some Practical Hints on Work in the Garage.

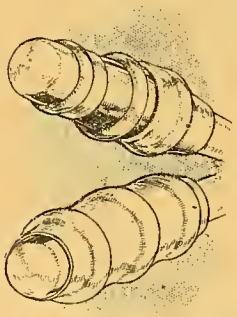
### Removing Water from the Tank.

THERE is a story of a Jewish house agent, not too familar with the English idiom and of very humanitarian tendencies, who refused to let a house to a man who objected to the size of certain rooms as being "too small to swing a cat round in." The headline to this paragraph also prompts a sort of resentment—Why should anyone want to remove water from a petrol tank? Despite the fact that a petrol tank should have no water in it to remove, occasionally in the best regulated machines the alien element is found, and to remove it without unnecessary waste and mess Mr. G. Temple, of Buckhurst Hill, says: "Obtain a medical syringe of any description, and add sufficient rubber tubing to the business end of it to just touch the bottom of the tank. Lift the front wheel, or have the machine pointing up an incline, thus allowing the water to collect where it can be seen from the filler-cap hole. Place the rubber tube on the bead of water and withdraw the syringe plunger sufficiently to suck up the water, and the thing is done. A tank can be completely cleared in a few moments with a minimum loss of petrol."

If a syringe is not available, of course, nature has provided us all with lungs and lips, and the machine probably has a bit of rubber tube on it somewhere. Suck the bead of water into the tube, nip the latter tightly, and withdraw from the tank, and *voilà!* (Even, Mr. Temple, as your Editor has done on occasion!)

### Making Rubber Handle Grips.

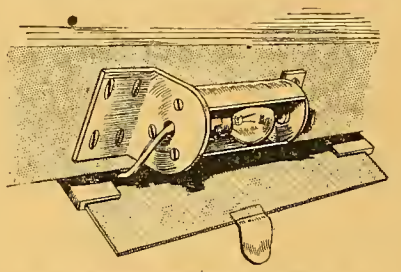
HERE is a most ingenious method of making a pair of rubber handle grips from old pedal cycle inner tubes, which, if not available, can usually be bought for about sixpence each from the cycle shops. This idea is submitted by Mr. M. H. Dawson, of Hastings, who says, "First cut six pieces of tube 2in. in length and place one of these on the handle-bar and roll it into a ring; now cut a piece 1½in. longer than the grip and draw this over the ring and turn back the loose end so that two more rings can be formed on the grip, then pull the tube back again to cover the lot."



Rubber covered handle-bar grips made from old bicycle inner tubes.

### Sidecar Dash Lamp.

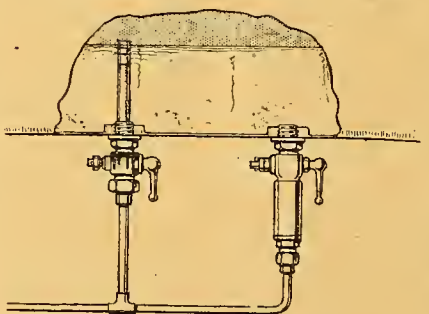
AN ordinary batten lamp-holder carrying a low power small bayonet cap bulb, a piece of brass tube, and two angle pieces made from brass plate formed this little convenience fitted to a sidecar owned by a member of *The Motor Cycle* staff. Immediately below is a flat sliding shelf on which a route card or plan may be fixed with drawing pins. Should brass be unavailable, no doubt the lamp could be made from odd scraps of tin with little detriment to the appearance if it was finally finished with dull black varnish.



For the sidecar passenger: a dashboard lamp and route card holder.

### To Prevent Running Out of Petrol.

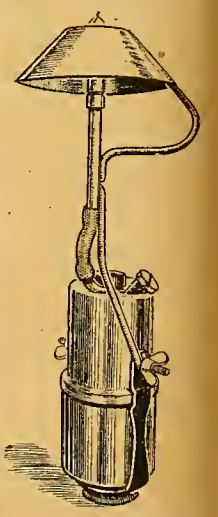
THIS particular paragraph is inserted chiefly as a warning. Our post each morning contains usually a score or more of readers' ideas—useful and ingenious. Not to make invidious distinctions, we categorise this one as "useful," but the trouble is that every other person sends it as new. The idea is to fix another tap in the petrol tank with an upwardly projecting pipe—but why explain? The drawing is quite clear. When your petrol in the tank drops below the projecting pipe your engine stops, and you lose your medal in a non-stop section; you then turn on the low level tap, and know that there is enough spirit left to get you to the "Crown and Anchor." It is a good device for forgetful riders, and fitted to a certain Grand Prix racer last year might have appreciably affected the results. A reader designated by the initials "W. D. B." is responsible for the scheme, but, lest he swells with pride, we must inform him that he is the one thousand and eighty-sixth reader who has submitted it.



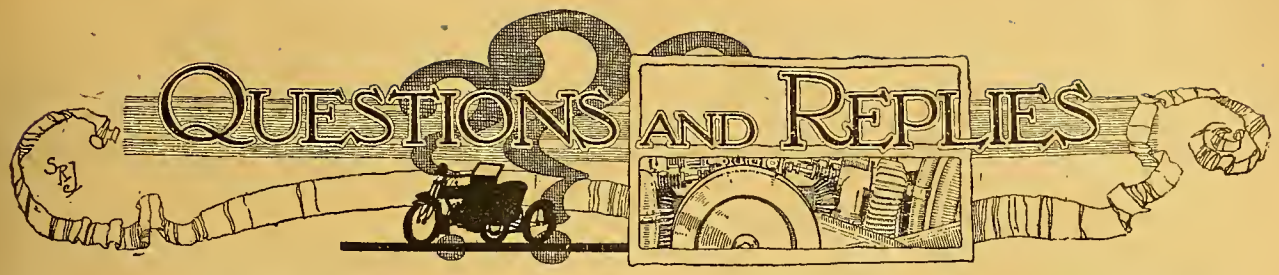
Arrangement of taps giving a reserve supply of petrol in the tank.

### Workshop Lighting.

THE title to this paragraph is a plagiarism on the title of a high-brow volume, published from the offices of *The Automobile Engineer*, dealing with the lighting of factories on the most scientific principles. However, the matter in hand is conceived on a much smaller scale. A reader who writes as "AR 8414" found the need for a portable light while repairing a clock (whether dashboard, alarm, grandfather, or village church he does not say), and having made the gadget it was promptly acquired by Mrs. AR 8414 for household purposes. He describes its making thus: "The arrangement consists of a tin shade properly shaped from a paper pattern, soldered on to a stout piece of copper wire, which in turn is fixed in the same way to a piece of brass tube of appropriate size to carry an ordinary 10-litre burner. A second piece of copper wire serves to hold the tube in position above the generator, the wing nut in the latter being requisitioned to clamp the wire at the required angle. A piece of rubber tube connects the brass tube with the generator. The whole outfit took about an hour to produce from scrap material, and has proved an an invaluable adjunct to an amateur's workshop."



Acetylene lamp for use in the workshop.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### FAULTY CONDENSER CONNECTION.

Burning at the platinum points of my U.H. magneto is becoming very pronounced, and they have to be faced up at about every 100 miles. Am I right in assuming that the trouble lies in the condenser being faulty? The condenser appears to be broken. When the platinum points are clean I get a good spark at the plugs.—G.H.

Burning of the platinum points is usually due to a fault in the condenser or to the condenser being disconnected. We think your best plan would be to return the magneto to a firm of specialists in magneto repair work as you really cannot effectively repair it yourself, and there is always a danger of damaging the insulation of the high-tension windings.

### GEAR RATIOS FOR INVALID TRICYCLES.

Being a disabled soldier, and having an invalid tricycle to which I am now having fitted an Economic two-stroke engine of 1½ h.p., I want to know what gear ratio these sprockets will give me: Engine—10 tooth to 52 tooth on countershaft; 10 tooth sprocket on countershaft to 30 tooth sprocket on differential axle; there is no clutch, and I do not want high speed. I have a friend who is also disabled, and he has an Auto-Wheel attached to his tricycle. Will you let me know what gear ratio his fixed gear gives him? The engine has a 12 tooth sprocket driving to a 30 tooth sprocket on road wheel.—W.K.

The sprockets you mention will give a gear ratio of 15 to 1. This will be rather too low for general running; moreover, sprockets with such a small number of teeth as 10 are not good practice. We would suggest that you use an engine sprocket of 15 tooth driving the 52 tooth countershaft sprocket, and a 13 tooth on the countershaft driving the 30 tooth on the differential; this will give a ratio of 8 to 1. Should this prove too high, use a 13 tooth sprocket on the engine instead of the 15 tooth; this will give a top gear of 9.2 to 1, and should be about correct. The gear ratio of your friend's Auto-Wheel is approximately 6¼ to 1, making allowance for the comparison between its 20in. wheel and the 26in. wheels of the average motor cycle

## Important Dates.

**Wed., Mar. 15th—A.C.U. One-day Trial for Stock Machines.**
**Sat., Mar. 18th—Victory Cup Trial.**
**Sat., Mar. 25th—East Midland Centre A.C.U. Open Reliability Trial.**
**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Sat., April 1st—Western Centre A.C.U.—Open Reliability Trial.**
**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**
**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**

**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 mile sidecar race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish twenty-four hour Open Reliability Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**

### MATERIAL FOR BELT PULLEY.

Being tempted to construct a variable gear for rubber belts for a cycle car, could I make the pulley for the engine-shaft of hard wood, or would it be better of aluminium with bronze bushes? The reason I am having the belt pulley gear is to do away with a gear box and its attendant weight, as the car is to be only 160lb. when finished.—E.G.S.

Neither wood nor aluminium is suitable for the pulleys used on a cycle car transmission system. It will be necessary to have a cast iron pulley.

### MOTOR POWER FOR A BATH CHAIR.

Is it possible to attach an Auto-Wheel to a bath chair, and what is the best way to fit this form of power?—S.L.H.

It is quite possible to do as you suggest, but we cannot give the necessary details in a short paragraph. Any good motor cycle mechanic, however, should be able to undertake the work.

### SILENCING AND THE LAW.

What length of exhaust pipe do I require on a 3½ h.p. single-cylinder machine when not having a silencer?—M.E.M.

The legal requirement is that a machine shall be reasonably silenced by passing the exhaust gases through an expansion chamber or other "suitable apparatus." A long exhaust pipe does not usually render a machine reasonably silent, and there is no definite length of pipe legally laid down. You would be well advised to fit a proper silencer to the machine.

### A POROUS CYLINDER CASTING?

On taking off the cylinder of my 1919 4 h.p. machine, I find the inside of the cylinder minutely pitted all over to about a depth equal to the thickness of ordinary newspaper. I might add that I always use plenty of oil. I should be grateful if you could tell me the cause of it.—G C.A.

The trouble which you describe is an unusual one, and if you have been using a first-class brand of oil, we would recommend you to write to the makers of the machine asking their opinion, as it may be that the cylinder casting is at fault.

### EASILY FITTED VARIABLE GEARS.

I have an old model 3½ h.p. single-speed (no clutch) Rudge, and would like to fix it up to take a light sidecar occasionally. What style of gear could I use without having to alter the frame, as there is not much room for a gear box?—J.G.D.

The Bradbury (N.S.U.) pattern two-speed epicyclic gear and free engine, or the Philipson pulley can be recommended. Either of them will fit your engine without alteration. The former gives two speeds and free engine, and the latter, although not a free engine device, is simple in action, and does not require any controlling mechanism.

### REMOVING TRIUMPH MUDGUARD.

How is the front mudguard on a Triumph taken off? Must front forks be detached? I intend fitting a wider guard.—J.P.S.

It is necessary to remove one side of Triumph forks in order to take down the front mudguard.

### LUBRICATING THE MAGNETO.

After how many miles approximately should an M-L magneto be taken down for lubricating? I have ridden a machine thus fitted for exactly a year, covering, I should imagine, about 5,000 miles. Can I undertake this job myself, and is vaseline the correct lubricant?—J.P.S.

Your magneto should run a considerably further distance without requiring attention and we should advise you to return it to the makers for repacking the bearings with grease, as they would overhaul the magneto at the same time. However, this need not be done until you have at least covered another 5,000 miles.

### MACHINE FOR A VERY SHORT RIDER.

Is there any one machine which is exceptionally easy to start, as I am thinking of buying one, but being far from strong, and less than 5ft. in height, I have found the starting of all the machines I have tried to be rather difficult. I have thought of buying a sidecar outfit, of not more than 3½ h.p., as it is important that I should have one economical to run. I am rather attracted to the 2¾ h.p. machines fitted with a lightweight sidecar, as I should frequently use it alone, and when I had a passenger it would be one weighing 9st. Would one of these lightweights be quite satisfactory for me, and could it be used for a long journey?—A.S.G.

You should find any 2¾ to 3 h.p. lightweight of good reputation suitable for your purpose. Provided the engine is kept in good condition, there should be no trouble in starting. Bad starting is nearly always due to lack of attention, air leaks in the induction system, or some simple fault. Provided the machine is designed for light sidecar work, there is no harm in thus employing it. There are one or two two-stroke lightweights on the market which have very low saddle positions, and their possibilities for your special requirements should be considered.

## READERS' REPLIES.

### DIFFICULTIES WITH A TWO-STROKE.

With reference to your correspondent "H.L.L.'s" troubles with his Villiers engine, the following experiences with this power unit may be of use. About four months after I bought my machine the engine developed the troubles mentioned, and my petrol consumption rose to the appalling figure of 44 m.p.g. with a 27 jet in the Amac carburetter. After some weeks of most disappointing experimenting with the carburetter, I replaced the original sparking plug with a new one. The change was simply miraculous. I was able to reduce the jet size to 21, and with that I travelled from Bristol to London at an average speed of 24 m.p.h. with a petrol consumption of 96 m.p.g. Again, a few weeks ago the symptoms reappeared, but as the plug then on the machine had only done about 400 miles I scoffed at the idea that it was the cause of the trouble, until, after the engine almost stopped on a hill which it usually romps up with an 11 st. pillion passenger, I again changed the plug, and once more the machine is as good as ever.—AR 8414.

I have had "H.L.L.'s" troubles with an engine of the same make. After about 3,000 miles, popping back through the carburetter began, the machine running well for some miles, then very intermittently with much spluttering and sudden misfiring, suddenly beginning to pull well again, but it could never be depended on for any length of time. The petrol consumption ran up from a regular 104 m.p.g. to about 70 m.p.g. I tried everything I could think of to cure it. I suspected air leaks, but could locate none. I changed my plug and checked the ignition timing, also the tension of the magneto chain, but with no result. I finally came to the conclusion that the fault lay in the petrol service or carburetter. Frequent dismantling of the latter showed nothing for some time, until one day I located a minute bead of water in the jet. The cure began then, though it was slow, as the beads of water were so tiny that on the road it was impossible to find them. Let "H.L.L." carefully filter every drop of petrol he uses *for water*. I have got as much as a teaspoonful out of a fresh two-gallon tin! He will probably find an improvement; I did, and I know of other similar cases. I have now absolutely no trouble; my petrol consumption has gone back to normal; but, as a precaution, nothing but dire necessity will induce me to buy any but one particular brand of petrol which I have found to be freest from water. I am told water is present in all brands of motor spirit, especially in cans filled from the last of a storage tank, so that a proper waterproof gauze filter is a necessity.—R. F. WOODS.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"X.Y.Z." (Oxford).—7-9 h.p. ex-W.D. Harley-Davidson, 5 h.p. Sports Zenith, 3½ h.p. Rudge Multi; any other fast machine below £80; all solo: General experiences.

"P.B." (Hinckley).—2¾ h.p. A.J.S. (Model B1): General experiences; also best accumulator for, and method of carrying on, a solo machine.

"F.E." (Leeds).—Bowden extra air inlet on 6-7 h.p. B.S.A.

"J.S.L." (York).—Flexekas, F.E.W. and Ayrtite valve attachments; also W.S.R. jet adapter on 7 h.p. and 2¾ h.p. A.J.S. machines.

"H.S." (Heighington).—Morgan, family model: Efficiency on 5 and 11 to 1 ratios; advisability of four-speed gear.

"R.L." (Glasgow).—350 c.c. Beardmore-Precision, spring frame model with sidecar: Speed, economy, etc.

### Reduction in Price.

The oils marketed by Alexander Duckham and Co., Ltd., 4, Broad Street Place, London, E.C.2, have been reduced in price to the extent of 6d. per gallon.

### Essex Awards Amendment.

In the Essex one day winter trial, C. C. Labin, on a chain-driven Zenith-Bradshaw was awarded a bronze medal for second place in the 500 c.c. solo class.

### The Adelaide-Melbourne Record.

Recently C. W. Korner, a well-known South Australian motor cyclist, covered the distance between the two cities of Adelaide and Melbourne in 18h. 54m., beating the previous record by no less than 25m. 16s.

### West Midland Open Trial Awards.

Any correspondence regarding delays in receiving awards won in last November's Midland Centre Open Reliability Trial should be addressed to the Centre and not to Mr. P. W. Bischoff, who wound up his side of the work in December.

### Change of Ownership.

On February 14th the motor cycle and light car business of Coppen, Allan and Co., 89, Great Portland Street, London, W.1, came under the ownership of the late manager, Mr. W. E. Line. The distribution of Reading Standard machines and Plus One sidecars will be continued.

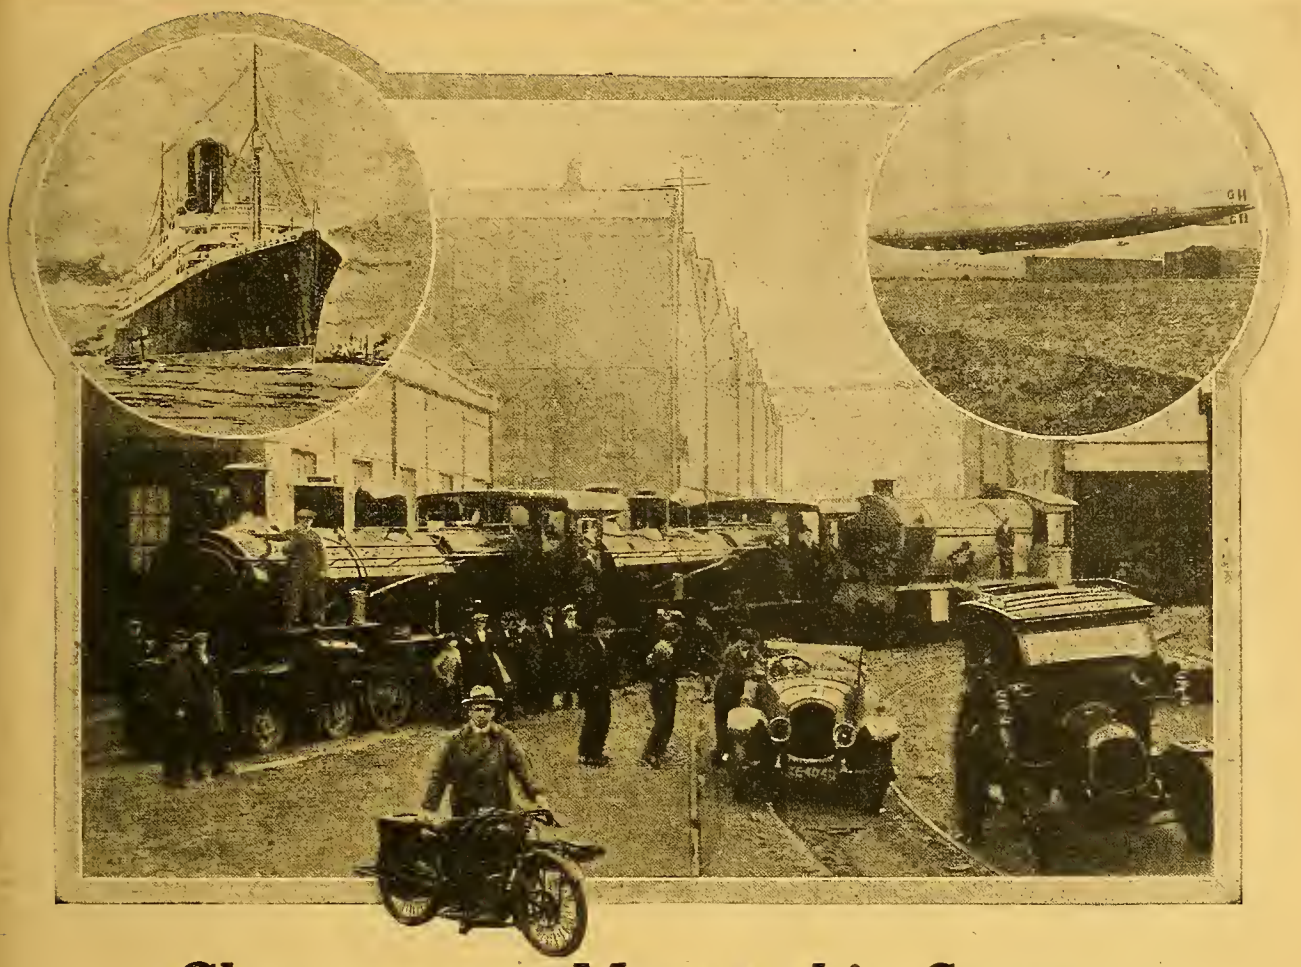
### Ariel Motor Cycles in London.

As Swift of Coventry, Ltd., no longer make a motor bicycle, their London depot, 132, Long Acre, W.C.2, has taken up an agency for Ariel motor bicycles and sidecars, and a representative stock of these machines will be held at their premises. It is not generally known that this company makes a speciality of carrying out all repairs to all makes of motor bicycles at its Long Acre depot.

### Catalogues Received.

Humphries and Dawes, Ltd., Hall Green Works, Birmingham. A very tastefully illustrated catalogue of the various model O.K. Junior motor bicycles. The illustrations are extraordinarily clear, that showing details of the O.K. compensating rear brake being well worthy of mention.

Usines Anzani, 112, Boulevard de Verdun, Courbevoie (Seine), France: Catalogue giving particulars of the French Anzani engines; single-cylinders of 2, 3, 4, and 5 h.p., 5-7 and 7-10 h.p. twin-cylinders, and the 10-12 h.p. cycle car engine with overhead exhaust valves, and cylinders set at 20°, air or water-cooled. Particulars are also given of Anzani magnetos.



# *Choose your Mount this Season*

## *from the famous BEARDMORE Stable!*

IN the 1922 race for Better Transport there are no finer entries than those from the famous Beardmore Stable.

Airships, aeroplanes, ocean liners, railway engines, motor cars, and motor cycles—in every class the Beardmore entry is a winner.

And the "breeders" are not afraid to back their own mounts. Down at King's Norton we make a strong feature of this. In commercial transactions it is called Service-after-Sale.

We stand by you when you decide to ride the Beardmore mount that's bred at King's Norton. "Baker's are nice people to deal with"—was how one delighted customer summarised in a sentence the many testimonials our Service-after-Sale has brought us. So stick to "The Old Firm"! Your mount has the right stuff in it if it has the right name on its flanks—

The picture shows some recent Beardmore contributions to the world of Transport:—the 18,000 ton liner, "Cameronia"; H.M. Airship R36; and the group in the Beardmore Locomotive Works, Dalmuir, is of 2 engines for the Nigerian Railway, one, for the East Indian Railway, a Beardmore touring car and the Beardmore taxi; in the foreground the spring-frame Beardmore-Precision.

**Send us outside diameter of the Exhaust Pipe.**

# The "ARGUS" SILENCER for open exhaust pipes.

THE patent silencer is made of aluminium, on account of its lightness and heat dispersing qualities. DELIVERIES can be made 7 days from receipt of order. Full satisfaction guaranteed or money returned. Guaranteed no loss of power.

Price **20/-** each *delivered.*

Silence your Engine without loss of power by purchasing one of our Patent Silencers.

*Agents wanted.*

**Copies of Testimonials received *re* PATENT ALUMINIUM "ARGUS" SILENCERS.**

"I have fitted 'Argus' Silencer to the tail pipe of a 6 h.p. V Twin the exhaust of which was very noisy. The result is perfect. The exhaust is now barely audible, being reduced to a mere puff. I consider the Silencer to be the best of its kind on the market and should supply a long-felt want. I may say that there is absolutely no loss of power—the pulling and slow running not being affected in any way."

"With reference to your Silencer delivered to me some short time ago, I wish to state that on first using I found a slight loss of power, but since receiving your letter advising me what to do in case of 'loss of power' (and doing the necessary) it is giving me entire satisfaction, and I wish to substantiate all claims made by you. Thanking you for your good business methods and prompt delivery."

"The Silencers in question have been fitted to a 1922 Model 10 h.p. New Hudson Light Car. With all cars of this type where the cylinders have independent exhausts, *e.g.*, Morgan, G.N., etc., the exhaust is apt to be a little pronounced. I find, however, that your Silencers give a pleasant and subdued 'boom,' while, as far as I can see, the 'freeness' of the exhaust is not in any way affected I notice also that they are very easily detachable for cleaning purposes."

"The patent Aluminium Argus Silencer supplied by you is entirely satisfactory. I find out that it is much more efficient than a muffle end, and practically no back pressure. It gives a very pleasing exhaust note. Wishing the 'Argus' Silencer every success."

"*Re* the Aluminium Silencer supplied to me some time ago. I must say I am more than satisfied with it, as I am the possessor of a particularly noisy type of 550 single machine and have previously experimented with numerous silencing arrangements. Except for mechanical noises, valves, c/s, chain, etc., when travelling, there is no appreciable sound at all, nor does the power appear to be in any way affected. In conclusion I must state I never got better value for my money." PORTARLINGTON

"With regard to the Argus Silencer fitted to my 2¾ h.p. Levis, I am quite pleased with this. It is the most effective silencing arrangement I have yet arrived at on this machine."

# "GOOD-SERVICE"
# ARMY TRENCH COATS
## AT 68/6 EACH

Made from GUARANTEED Government Materials by a former War-time Contractor.

**New Triple-Proof Gabardine, smart check permanent lining, interlined OIL SKIN, with an ALL WOOL Camel Fleece detachable lining.**

For Spring—Summer—Autumn or Winter Wear. These coats are offered in the usual civilian style. Government materials combined with the knowledge of work hands whose experience was gained in War-time production of this type of coat, and who know "what is required" in

## OFFICERS' ARMY TRENCH COATS,

are embodied in the manufacture of the "GOOD-SERVICE" Coat (illustrated). With fleece lining detached coat can be used as a smart Summer raincoat. With lining attached it gives all the advantages of an Ulster.

## 50% BELOW TO-DAY'S PRICES.

IF YOU CANNOT CALL, take advantage of our SATISFACTION GUARANTEE OFFER, which gives you an opportunity of COMPARING the value offered in the "GOOD-SERVICE" Coat against inferior garments now on the market.

**In response to numerous inquiries, we now offer similar Coats, less fleece lining,**

**AT 52/6 EACH.**

**Don't Miss this Unique Opportunity —— Call or Mail To-day.**

***OUR GUARANTEE.*** ***Should the garment purchased fail in any way to come up to expectations, WE GUARANTEE to refund remittance IN FULL without further question, provided the garment is undamaged and returned in seven days.***

*State chest (over vest) and height measurement when ordering.*

**HOODS.**—Finest quality, waterproof, with curtains round, **£3 5s.**

**MIRRORS.**—Concave 4", **7/6**, original 12/9; British; made and very best quality.

**GOGGLES.**—Genuine Triplex, 45/- model, **10/6**; 25/- model, **9/6.** They are new and perfect.

**GLOVES.**—Leather, wool lined, to clear, **4/6,** well worth 10/6; chrome leather gauntlets with finger and thumb, wrist strap, **3/6,** worth 12/6. Only limited quantity.

**CHAINS.**—Clearance Renolds, new, ¾ by 7-16, **6/6**; ⅝×⅜, **5/3**; ⅝×¼, **5/-**; ½×¼, **4/6**; ½×3-16, **3/9** per foot.

**WATERPROOF SUITS.**—Less than pre-war prices. Great purchase of manufacturers' stock, consisting of double-breasted coats with belts, storm cuffs, and collars, and seatless trousers with gussets, patent fasteners, and leather bound seats. Finest quality extra heavy double texture waterproof material, dark fawn, new and fresh, only been made recently, not half perished W.D. Our price to clear, **£2 2s.** Could not be bought elsewhere under £4 10s., the greatest bargain ever offered. Order immediately to save disappointment. All stock sizes.

**OIL SKIN SUITS.**—Lined, double-breasted coat, long trousers, with bib, first class quality, colour dark green, **17/6,** worth £3 3s.

**SOLDERING APPARATUS.**—A combined soldering iron and blow lamp. The most marvellous invention. Solid brass, 10" long, not a toy but a useful tool. No motorist should be without one. You can do your own soldering without any trouble—nipples to wire, and other small repairs to motor cycles. You will save time and expense. Only a limited quantity. Order now to save disappointment, as they can never be repeated again, **4/8** post free; original price 10/6.

**MOTOR CYCLES.**—Few shop soiled Allon and Radco's to clear. We can supply everything for the motor cyclist at competitive prices. On all above goods carriage extra.

8h.p. Twin Water-cooled J.A.P. Engine, Bosch magneto, sound, perfect; £20.—Box 9076, c/o *The Motor Cycle*. [2482

TRIUMPH 3½h.p. 1911, No. 15319, Bosch magneto; £8/10; or exchange twin.—R. Shelton, Cookhill, Alcester, Warwickshire. [2983

2¾h.p. Douglas, W.D., stationary engine, Bosch, Amac tank, seen running; £12.—76, Western Rd., Southall, Middlesex. [2393

2¾h.p. M.O.V. Douglas engine, complete with magneto and silencer, £6/10.—Anthony, 1, Townshend Cottages, London, N.W.8. [3064

2¾h.p. Twin o.h.v. J.A.P. engine parts for sale, all parts except flywheels; special cylinders, steel pistons.—T. Twentyman, Pickering, Yorks. [2285

6h.p. P.F. Twin, in perfect condition, with induction pipe, as new, suit sporty bike or cycle car; accept £7, no offers.—15, Totteridge Lane, Whetstone, N.20. [2622

NEW 8h.p. J.A.P. Water-cooled Twin, complete with magneto, £30; 6h.p. Buchet twin, air-cooled, with magneto, £15; 4h.p. Rex, M.O.V., £10.—Murray's, 37a, Charles St., Hatton Garden, Holborn. [3275

8-10h.p. National Gas Engine, 6½ bore, 2 flywheels, tube ignition, new liner and piston, running order; £42; exchange motor cycle or anything motorish.—Norris, 7, Colville Terrace, W.11. [1191

B.S.A. 4¼h.p. engines from £10; Clyno 5-6h.p., from £12; others in stock. Drop us a line; our speciality is engines, new and secondhand.—DeCort and Flynn, 39, Essex Rd., London, N.1. [2929

BERCLEY 6h.p. (French vertical twin, like latest Blériot), M.O.I.V., Bosch magneto, Zenith carburetter, absolutely no wear whatever. Appearance as new (silencer, etc., to suit purchaser). Ready to run. £12/10, carriage paid. Photo, 6d.—Jack Aucar, 110, Williams Rd., Cannon Hill, Birmingham. [2707

DOUGLAS 8h.p. Water-cooled, C.W. radiator, petrol tank, bedplate, starting handle, induction pipe, good condition, £11/10; thoroughly overhanled, new magneto, carburetter, guaranteed running order, £21, carriage forward; make splendid light car engines; large selection; stamp reply; trade supplied.—Derrington, Grafton Rd., New Malden. [2099

HEPPLETHWAITE'S J.A.P. 5h.p., as new, £14; 4h.p. O.H.V. J.A.P., £5; 3½h.p. Humber, £6/10; 3½h.p. Alldays, £4; 3h.p. Minerva, £3/10; vertical twin 2-stroke, £5; 2h.p. Ariel, £2; and 5 h.p. and 8h.p. J.A.P. spares galore, the entire stock of W. Hawkins. For other spares see Old Man Hep. advertisement in Spare Parts. Stamp for reply, please 'Phone: 1958 Brixton.—19, Wilcox Rd., South Lambeth, London, S.W.8. [3255

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

**IMPORTANT AGENCY EXTENSION**

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

WRITE TO-DAY FOR FULL PARTICULARS.

Address—Agency Dept.,

The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED

Head Office:

77, Cheapside, London, E.C.2.

*Telephone: City 9831 and 9832.*

*Telegrams: "Autoinsure, Cent. London."*

## ENGINES.

J.A.P. Engines. J.A.P. Engines.—I have the largest stock of J.A.P. engine parts in England; over 30 engines, all in stock, to select from; and the prices: 6hp. £15, and the 8h.p. at £20 and £17/10, and I have all parts for the 8h.p. (see accessories for parts). I have a big twin engine £12, a 4h.p. Douglas engine and mag. and carburetter £15, a small 2-stroke and mag. £10; stamp reply.—South Croydon Motor Exchange, 22, South End, Croydon. [4765

## IGNITION, LIGHTING, ETC.

H.B. I. Co.

H.B. for new and second-hand magnetos; all spares stocked.

H.B. Specialise in Thomson-Bennett, complete for fixing to Triumph.

P.M., J.A.P., Douglas, 2-stroke engines, etc.; £3.

C.A.V. New, twin and single, clock and anti; £3.

DIXIE, Single and twin, all degrees; £2/5.

H.B. Guarantee all magnetos one year.

H.B. will take your old machine in part payment.

H.B. Despatches all goods per return, carriage paid, on approval against cash, or through *The Motor Cycle* deposit system.

H.B. Ignition Co., 78, New Park Rd., Brixton Hill, London. 'Phone: Brixton 610. [0694

MAGNETOS 50% Below List.

APPLY Vale Engineering Syndicate, 9 and 10, Brown's Buildings, St. Mary Axe, E.C.3. Tel.: Central 877. [0698

COUNTY of London Engineering Works, Ltd.

ALL Magneto Spares stocked.

GOVERNMENT Surplus Magnetos (new, unused).

BOSCH, Single, type D.A.L., variable ignition; £3/15 each.

M.L. Single Enclosed Waterproof, variable ignition, £4 each.

THOMSON-BENNETT, single, enclosed waterproof, variable ignition; £3 each.

THOMSON-BENNETT, single, enclosed waterproof, variable ignition, all degrees; £3 each.

C.A.V., single, enclosed waterproof, variable ignition; £3 each.

C.A.V., twin, enclosed waterproof, variable ignition; £3 each.

RUTHARDT, single, enclosed waterproof, variable ignition; £2/10 each.

BERLING, single cylinder, enclosed waterproof, variable ignition; £2/10 each.

SPLITDORF, single, enclosed waterproof, variable ignition; £2/10 each.

DIXIE, single, enclosed waterproof, variable ignition; £2/5 each.

DIXIE, twin, enclosed waterproof, variable ignition; £2/5 each.

ANY of the above single-cylinder Magnetos can be supplied with the special long driving spindle, suitable for Rudge.

THESE Magnetos are fitted with leads and baseplates, ready to be immediately fitted. Please state make of engine when ordering.

GUARANTEE.—We guarantee all our Magnetos for 12 months, and will willingly replace or repair any that should prove defective within that period.

SEND your repairs to us; it will pay you; all repair work guaranteed.

COUNTY of London Engineering Works, Ltd., 6, Garden Lane, Christchurch Rd., Streatham, London, S.W.

TEL.: Streatham 2898. T.A.: Ignitionac, Brixstret, London. [1848

MAGNETO and Engineering Co. for magnetos, spares and repairs.

BOSCH enclosed waterproof type D.A.L. magnetos, Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds, makes your engine a real live engine, gives you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each, postage 1/6 extra; a twelve months' written guarantee sent out with each magneto; we give you satisfaction or refund cash; send or call for one to-day.

MAGNETO and Engineering Co., Magneto House, 28, Bateman's Row, E.C.2 (1 minute from Brown Bros.). [2333

DIXIE, 50° Anti, good, 35/-; ⅞in. pulley, 3/6.—73, Meon Rd., Portsmouth. [2854

DYNAMOS (new), 120 watts, £7; 250, £9.—Engineer, 20, Glendarvon St., Putney. [1078

## "Rear Lights for All."

PROBABLY no subject has aroused more bitter controversy in the past than the question of compulsory rear lights on pedal cycles. Now apparently we are in the throes of a similar discussion with reference to the solo motor cycle, which, in company with the motor-less bicycle, is now enjoying a respite from any legal obligation in the matter.

The question is a very difficult one. On one hand we have the cyclist's and, occasionally, the motor-cyclist's allegation that rear lamps are only essential to assist the inadequately lighted motor car to preserve a higher average after dusk than the two-wheeler is capable of maintaining, this, of course, applying to the motor cycle only when it is of low horse-power or on treacherous roads; and that all single track machines should be exempt. Alternatively it is postulated that since the motor bicycle is the fastest vehicle on the road it should not be compelled to conform, but that the pedal cycle should.

These are conflicting views, although each is based on a modicum of truth. At the same time pedal cyclists and those motor cyclists who at night do not exceed 15 m.p.h., cannot fairly object to other motor vehicles driving at the legal limit of 20 m.p.h. Again, the solo motor cycle, speaking generally, is the fastest machine on the road, but only in day-time, and it is obviously impossible to differentiate and procure special exemption for those riders who pride themselves that they are never overtaken after dusk.

No motor cyclist, whatever type of machine he rides, will deny that he appreciates the pedal-cyclist's rear lamp, that, in fact, he would appreciate red warning signals on all road obstructions, which, incidentally include any vehicle travelling more slowly than himself at any given time. Therefore since it cannot be arranged that all traffic travel non-stop at a constant speed, or even that all solo motor cycles maintain a speed just in excess of everything else, it seems best that motor cyclists should, even at slight personal inconvenience, support the movement calling for rear lights for all.

## Awards by Ballot.

FROM the earliest days of motor cycle competitions the difficulty of finding a winner has always been a very real and ever-present one. In times gone by the premier award has not necessarily been made to the man who had the best and most reliable mount, who had ridden it most skilfully, nor who had overcome the greatest number of difficulties, but to the man who has been most successful in speed judging, or, in other words, adhered most closely to schedule time. This has been by no means an ideal condition of things, but a winner had to be found somehow.

Now, the Motor Cycling Club, which has been responsible for quite a number of innovations as regards competitions, has struck upon an idea, not original, but one which may work perfectly well in their commemorative End-to-End run next July. In brief, the idea is taken from a practice adopted in the Navy, when in times where great bravery was displayed a number of men qualified for that most coveted medal, the Victoria Cross, and in these circumstances it was left to the men themselves to decide who among their number should receive the great honour.

This idea may work perfectly well in the End-to-End run, for in riding in close company for four days those qualifying for a gold medal will be in an excellent position to select one from among their number whose prowess in riding, whose ability to overcome difficulties, and whose super-excellent performance shines among the others. In a largely supported trial naturally the difficulties would be greater.

An index to the advertisements in this issue will be found on the page facing the back cover.

BY IXION

## I Live and Learn.

THE makers of the Aquamac waterproof suit are intensely amused at my supposing that the pneumatic pipings down the edges of their garments were intended to avert the crumpling which usually disfigures a motor cycle suit after a few trips on the road. This piping certainly helps a garment to keep its shape, but the makers fit it as a wind and rain seal, for the concealed rubber tubing is flattened out when the garments are fastened up, and so forms an impenetrable joint.

## Oiling Plugs Downhill.

MY remarks on this topic have wrung wails from a host of sufferers, mostly men whose homes are surrounded by precipices, and whose mounts are heavy sidecars, compelling the frequent use of the engine and a low gear as auxiliary brakes. Some of these victims have reached the point of desperation. The happier warriors have mostly found salvation in the Binks carburetter, which, of course, allows one to suck neat air into the cylinders with the throttle shut. But a few commend various little-known sparking plugs. There is the M.A.P., which has a bridge electrode directly beneath the gap; its theory presumably is that when a blast of oily mixture is hurtled at the points, the bridge splits the blast and saves the gap; but how about a combustion chamber with any pretensions to turbulence? Other readers applaud a plug with a hook electrode. The oil trickles down the hook clear of the gap, and hangs suspended like a ham on a farm ceiling—see previous suggestion anent turbulence. One of these Binks enthusiasts has a sports Sunbeam, on which he claims the creditable economy of 90 m.p.g. at 30 m.p.h. using jets 000,2 and 9 in summer, and 000,3 and 9 in winter.

## The Non-Stop Bike.

EXPERIENCE has taught me that a first-class British 500 c.c. machine in normal use is only capable of sustaining five types of involuntary road stoppage. They are as follows:—

i. A crash.
ii. A puncture.
iii. A dud sparking plug.
iv. A choked jet.
v. A dry tank.

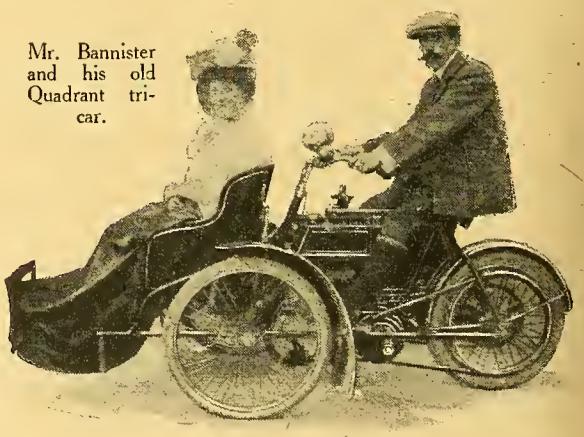
During the season of 1922 I propose to try to eliminate the lot. Here is my *modus operandi*, with what the Red Cross call the correct antidote for each hoodoo.

i. Insure for £1,000 (infallible).
ii. 3in. tyres, enclosing Challenger tubes.
iii. S.O.S. !!! * * * ???
iv. A good petrol filter (the one fitted to my Scott kept a hair-like oooooooooo Binks jet clear through a whole summer for me, and I have a B. and B. and an M.A.P. to play with as well).
v. A three-way tap—the simplest safeguard against personal carelessness.

Barring freak trial work (I *always* begin to wobble when a placard says, "Observed Hill Begins Here"), I hope to go through 1922 non-stop.

## The Double-Engined Quadrant Tricar.

MY comment on this machine has evoked a photograph from Mr. Bannister, of Midhurst. He bought one in new condition for £30, as its disgruntled owner found that a surface carburetter in combination with a lengthy Y inlet made for grievous difficulty in starting up. My correspondent overcame



Mr. Bannister and his old Quadrant tricar.

this trouble by drilling both inlet pipes close up to the valves, sealing the holes with leather-covered spring clips, and injecting warm petrol. His model used a twin belt drive to the countershaft, on which a dog clutch gear threw in a ⅞in. belt for the high ratio and a chain for the low. He does not appear to have troubled whether the two engines synchronised or not, and remarks that the exhaust note was eternally varying, accordingly as the two forward belts slipped. In his view the arrangement was so satisfactory that it is worth copying even at this date.

**Occasional Comments.—**

## The Ricardo-Triumph on the Road.

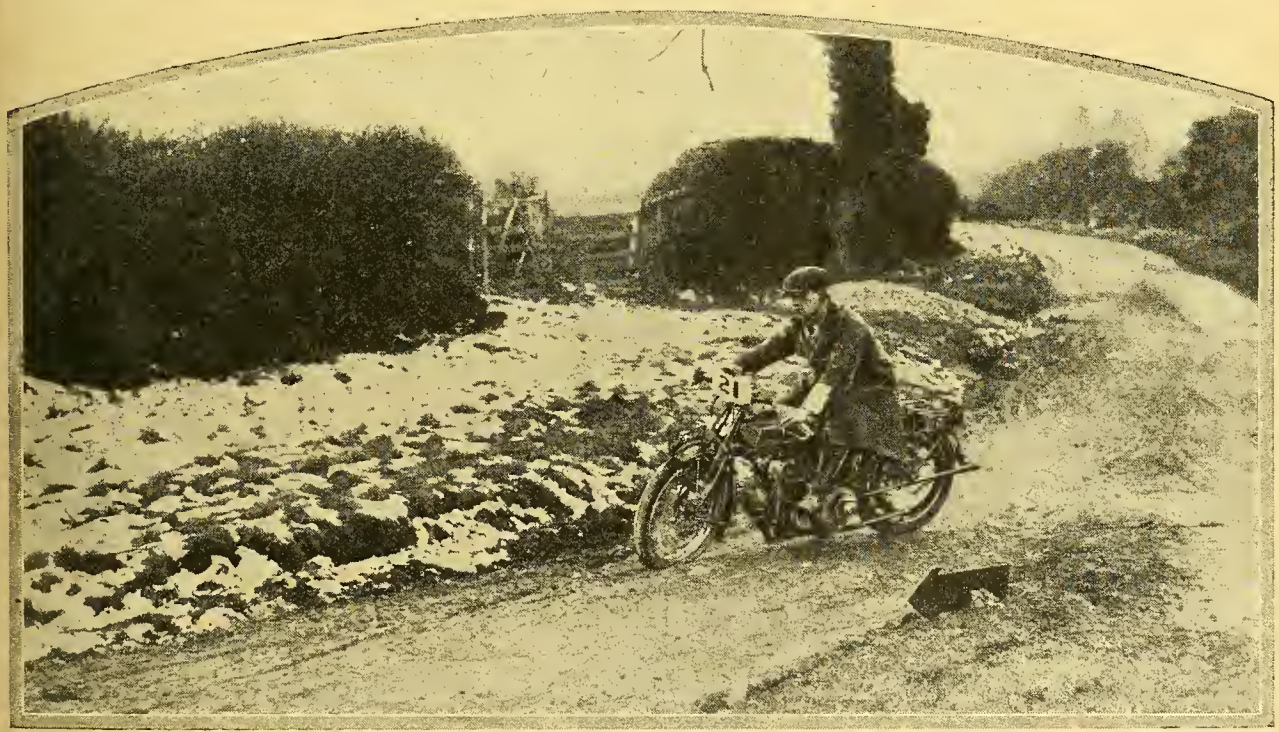
MY Ricardo is daily establishing herself more deeply in my affections. She has had about a month of daily use, is a first-time starter from stone cold, never needs anything doing to her, is very thrifty of the precious juice, and, thanks to the secluded position of her sparking plug, can be left out in the rain for hours without sulking afterwards. But when all is said and done her extreme comfort is the principal merit of a most taking layout: Druid forks, 3in. tyres (run rather floppy), a particularly steady, stiff engine, and a phenomenally smooth drive make for very pleasant riding. Incidentally, she is quite the fastest "production" 3½ h.p. which has ever been delivered to me, and I should estimate her vantage in that respect as very nearly 10 m.p.h. One pays a price for everything. In her case the price is that efficiency is obtained by a piston which is very, very sloppy until it is thoroughly warmed up. When I start out from cold I cannot use full spark advance on top gear for a distance of perhaps as much as 5 miles.

## To Beat America?

I WAS privileged recently to see the drawings of a new 1,000 c.c. racer, which is still in the egg, so to speak, but has been begotten by the right sort of people, and has all the big class Brooklands records as one of its motives. Private owners may be interested to know that they are the real obstacle which prevents the launching of several very promising 4-cylinder mounts. There is no technical difficulty whatever in the way. A shaft-driven 4-cylinder must always be fractionally more costly to build than a chain-driven twin, but really scientific production would probably permit a 4-cylinder outfit to be sold at, say, £175. Its running would be infinitely superior to that of most twins, and it would give a refined tickover in neutral. On the other hand, these are not days in which capital is sitting up and begging to be employed on uncertain enterprises, and the real question is, how far is the big-twin enthusiast enamoured of his big twin, and how quick will he be to welcome something better? If he doesn't invest for two or three seasons, whilst the other fellow is proving the merits of the new four, capital won't earn its interest. My counsel to these hesitating designers was "Full steam ahead!" I believe that motor cyclists as a class are quite rapid in recognising merits. If a new 'bus is designed by a trusted name, built by an honoured factory, and can put up a tidy show on Brooklands when it steps out of its cradle, its sales will be perfectly satisfactory right away.

## Flywheel Drag.

A "DESIGNING" friend of mine—I use the word in a good sense—finds that if he injects a charge of oil into the crank case of an engine running a bench test at full revs., the power drops by a full horse-power for three or four minutes. Consequently his next engine will not only be given a much larger flywheel clearance inside the crank case than is usual, but will also be equipped with a mechanical oil pump.



TRACTABILITY OF A SPEED MOUNT. From all indications the four-valve Triumph will be an extremely popular trials mount this year, and already privately owned examples have made their appearance in the early spring events. As the picture indicates, this newcomer to the speed world can be exceedingly controllable and docile when required.

# MODERN PRACTICE IN ENGINE DESIGN.

## A Review of the Present-day State of Motor Cycle Power Unit Construction.

IN considering the motor cycle as a whole, the engine presents most scope for improvement and individuality. In consequence it has received the most attention, and though transmission, frames, and springing are all capable of considerable improvement, it is right that the motive power should have first consideration. To the casual observer, however, there has been little change in motor cycle engines for many years, yet those who have ridden them are keenly aware of immense improvements in performance and reliability.

How, then, have these improvements been brought about? Partly they are the result of experience, partly of improved metallurgical knowledge, and partly of scientific research.

### Still Scope for Development.

Not by a very long way have we reached the limit of power output per unit of capacity, nor of thermal efficiency, but steady progress is being made, and the popularity of small engines even for long-distance touring is a sign of the efficiency of modern designs generally. The details which have brought about the increase in power and reliability are too numerous to incorporate in a single article, and we must content ourselves for the present with a general survey of development, though we propose to go more closely into details of specific engines in later articles.

First and foremost, better cooling arrangements, brought about by more scientific distribution of metal and ribs, have enabled the power output to be increased without causing undue distortion or overheating; without this basic change many modern improvements would be brought to naught.

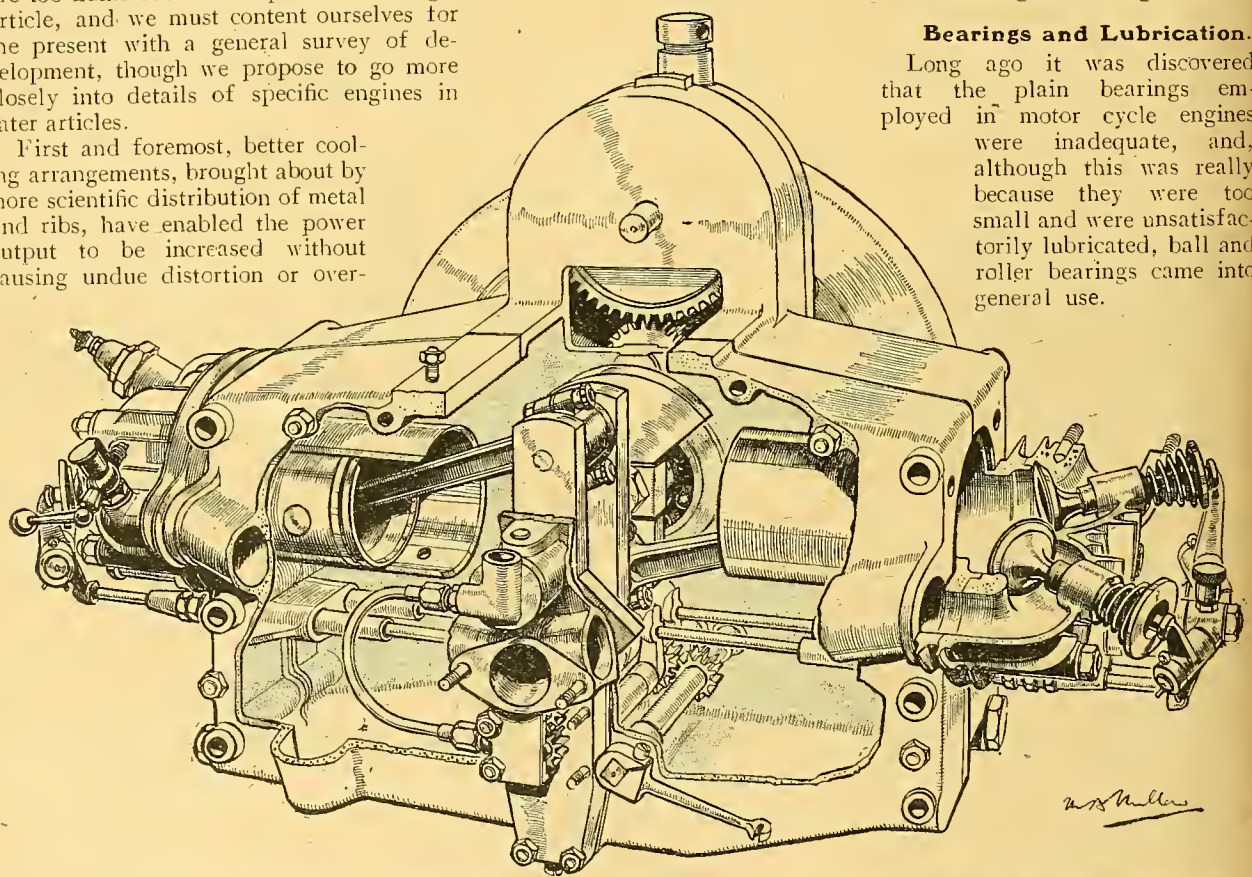
### Improved Volumetric Efficiency.

A study of the laws governing gas flow has caused port design to be modified to a very considerable degree, enabling a greater weight of charge to be induced in a given time, and avoiding obstruction to the flow of exhaust gases. This in itself tends to raise the actual compression at large throttle openings, and better cooling has also enabled even higher actual compression ratios to be employed. Easy ingress and egress of the charge brought high revolutions into the realm of possibility, but before these high engine speeds could be used to advantage it became necessary to lighten reciprocating parts so as to avoid undue bearing stress due to the rapid acceleration of masses constantly reversing in direction.

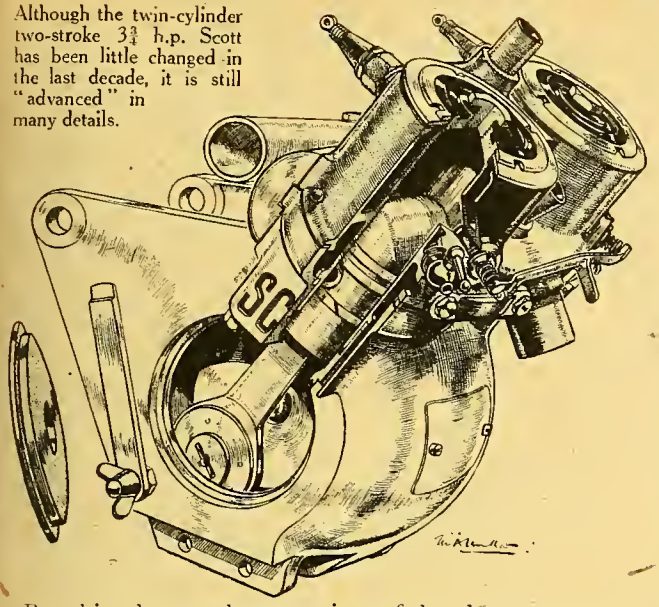
This reason has brought the aluminium piston into prominence, and though much trouble was experienced with some early designs, the type has come to stay. Not only is aluminium light, but its conductivity is high, and consequently a well-designed piston of this material sensibly improves the internal cooling of the engine.

### Bearings and Lubrication.

Long ago it was discovered that the plain bearings employed in motor cycle engines were inadequate, and, although this was really because they were too small and were unsatisfactorily lubricated, ball and roller bearings came into general use.



Inclined over-head valves and oil-cooling are distinctly modern items in the 500 c.c. Bradshaw flat twin engine. Oil spray supplied by a mechanical pump is continually splashing on to the enclosed cylinder barrels, the under-sides of the pistons, the valve-gear, etc. The inlet manifold cast with the crank case is also indicated.



Although the twin-cylinder two-stroke 3¾ h.p. Scott has been little changed in the last decade, it is still "advanced" in many details.

By this change the retention of hand pumps or drip feed oil supply became possible, and though these systems are not likely to remain on high-class machines very much longer, they have served their purpose well.

The correct location for valves is still disputed by many; but there can be no doubt that a well-designed overhead valve engine is capable of higher all-round efficiency than the side valve type, though a badly-designed overhead valve engine is a thing to be avoided at all costs. The possibilities of the overhead valve have led many designers to experiment in this direction, and the results obtained have varied with the degree of knowledge brought to bear on the subject; it is significant, however, that the majority of modern overhead valve engines have inclined valves with the inlet and exhaust ports separated as widely as possible.

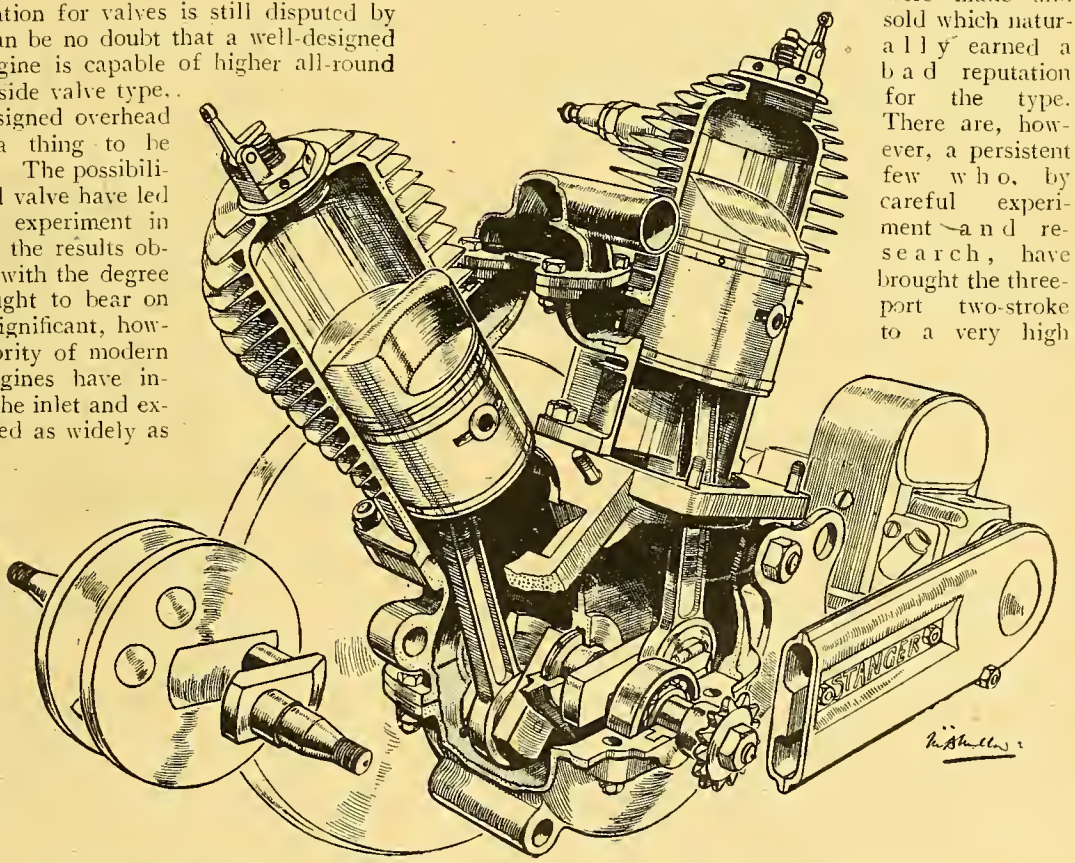
### Non-breakable Valves.

Progress in metallurgy and the heat treatment of alloy steels have together brought unbreakable valves within the range of practical usage, and this will be an additional incentive to the use of overhead valve gear. There remain the minor difficulties of housing this type of engine in a motor cycle frame, and of eliminating mechanical noise. Both these troubles have been overcome in certain instances, and there is no reason why they should not be overcome generally.

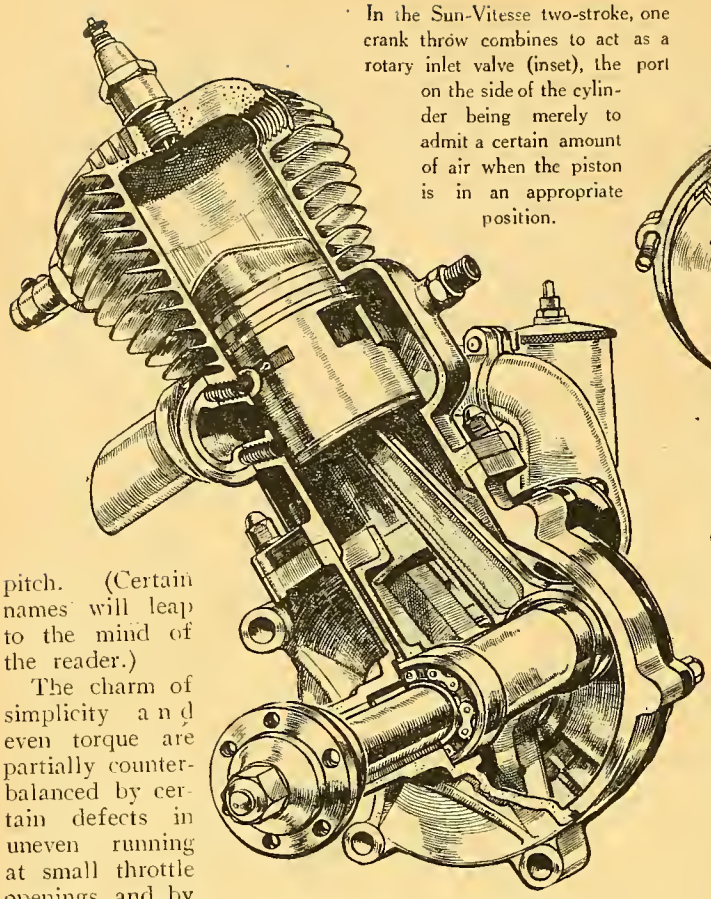
Two innovations of recent date show great promise, although they are distinctly unconventional as far as motor cycle practice is concerned. The first of these, the Bradshaw oil-cooled engine, is based on well-proved theories which came to light during research work on aero engines, and incidentally have great possibilities for all types, more especially in the case of multi-cylinder layouts, where direct air-cooling is a somewhat difficult matter. The second example of unusual practice is the adoption of the Burt single sleeve valve by Barr & Stroud, Ltd., and both bench tests and road work with the B. and S. engine have clearly demonstrated the fact that it is possible to combine very high efficiency with almost entire absence of mechanical noise. In addition to the foregoing points, simplicity and accessibility are important features of this very interesting design.

### Two-Strokes.

Progress in two-stroke design was unfortunately delayed in its early stages by the fact that almost any cylinder with holes in approximately the correct positions *will run*, and consequently many poor engines were made and sold which naturally earned a bad reputation for the type. There are, however, a persistent few who, by careful experiment and research, have brought the three-port two-stroke to a very high



Offset cylinders on the 5 h.p. V twin two-stroke Stanger permit the crank case to be partitioned into two separate compression-tight compartments, and also allow the rear cylinder to receive a fair cooling draught. Constructionally the crank case is bisected horizontally, not vertically, and the deflectors and transfer and exhaust ports are set across instead of fore and aft in the cylinders.



In the Sun-Vitesse two-stroke, one crank throw combines to act as a rotary inlet valve (inset), the port on the side of the cylinder being merely to admit a certain amount of air when the piston is in an appropriate position.

pitch. (Certain names will leap to the mind of the reader.)

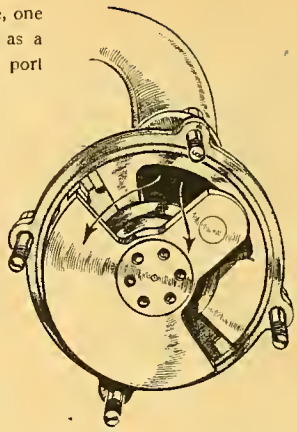
The charm of simplicity and even torque are partially counterbalanced by certain defects in uneven running at small throttle openings and by high fuel consumption. These weaknesses are, however, not essential to the two-stroke engine, and though some slight complication may be necessary to overcome them entirely, much good work has been done towards eliminating the troubles by careful port and deflector design. In the near future it is probable that the two-stroke will play an even more important part in the progress of motor cycle design than at present. There would certainly appear to be more outlets for ingenuity in two-stroke design than is the case with four-strokes, promising fields for exploration being numerous.

The simple two-stroke also lends itself to cheap production, and should materially assist to bring about the motor cycle for the million.

### Multi-Cylinder and Big Single Two-Strokes.

As yet we have only one successful two-stroke up to the 500 c.c. limit (the Dunelt), and multi-cylinder two-strokes are confined to the Scott, Stanger, and Low, though at least two successful pioneer firms, the Levis and Connaught, have experimented with flat twins. The even torque of the vertical twin two-stroke or the V twin with separate cranks provides similar power impulses to the four-cylinder four-stroke, and the engine is lighter and more compact.

All the drawings which accompany these notes were obtained by our artist direct from sectional engines, and in some cases the sectioning has been carried further in order to reveal their most interesting features.

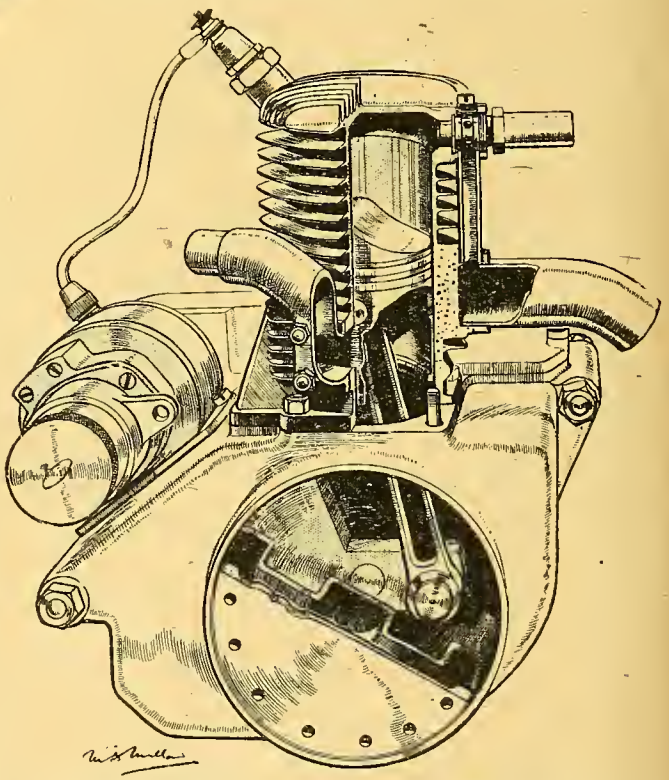


Most of the engines illustrated are chosen because special interest is centred on them at the present time as revealing tendencies in design. For example, the drawing of the Bradshaw oil-cooled engine clearly shows how the cylinder barrels are enclosed by the crank case and are cooled by oil splashed upon them by the mechanical pump. The formation of the valve pockets and the valve gear is clearly shown.

The Stanger V Twin two-stroke is another interesting example of modern design, and a study of the illustration reveals how the crank case is divided to form two separate chambers, while the drawing of the Scott shows another type of two-cylinder two-stroke, which, incidentally, has remained practically unaltered for over a decade.

That mechanically operated valves are now being considered in connection with two-strokes is indicated by the illustration of the Sun engine. The subsidiary drawing is of the rotary valve and crank throw.

Reference has already been made to the Barr and Stroud sleeve valve design, and to the Dunelt, which represents the only engine in the motor cycle field having a two diameter piston.

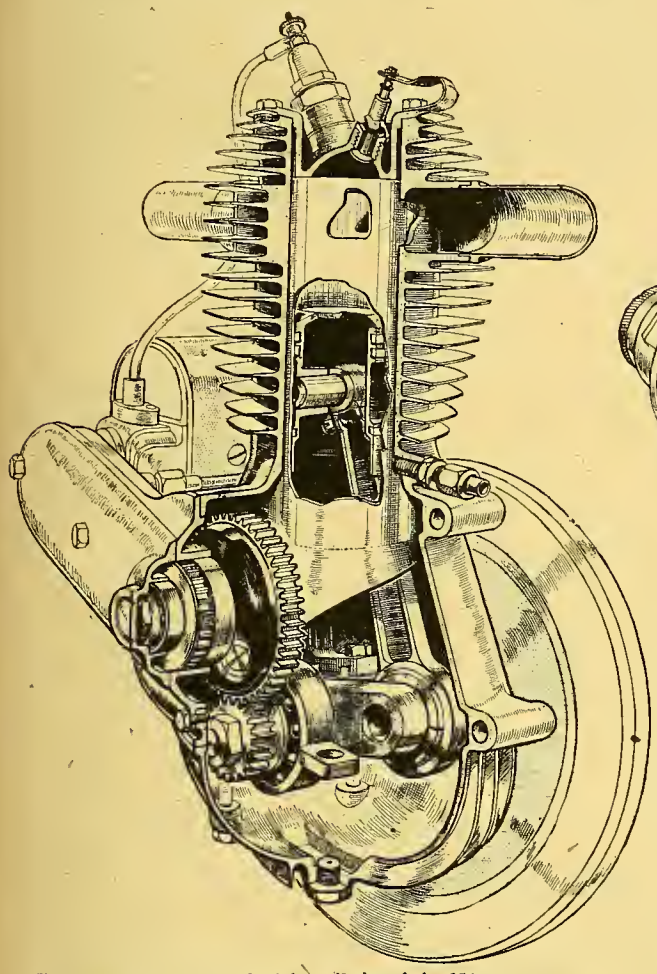


Mechanical lubrication, using a crank-case sump, leaves the Velocette two-stroke a remarkably clean exterior. As may be seen, the magneto is attached directly to the crank case, dispensing with a separate bracket.

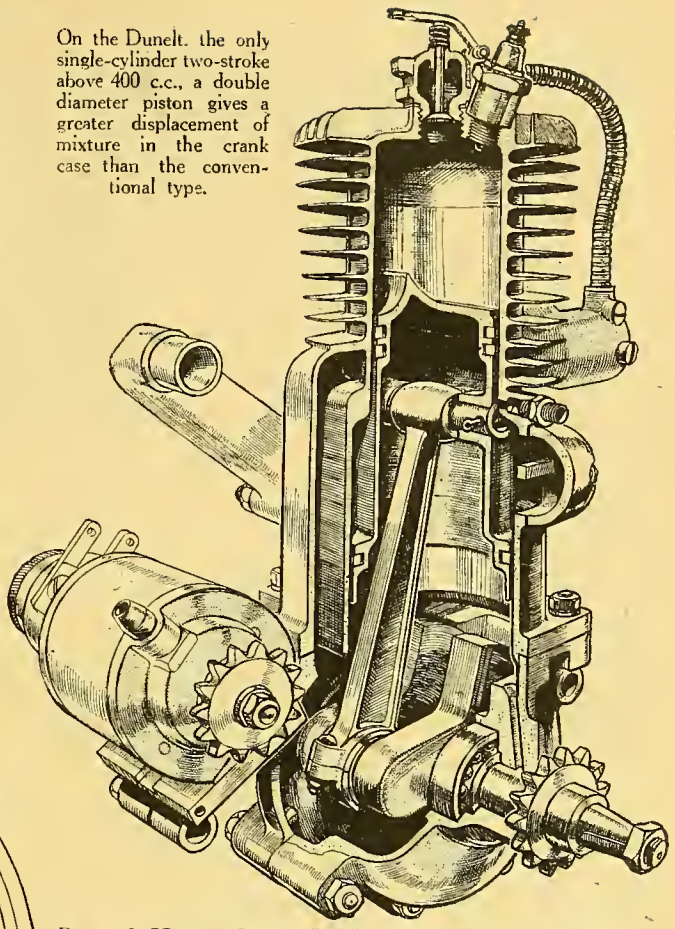
**Modern Practice in Engine Design.—**

Mechanical lubrication is not the only feature of the Velocette unit, which may be regarded as advanced when applied to a small two-stroke.

There are many others which depart from the more commonly used designs in one way or another. The Triumph four-valve single cylinder is not the least important. The o.h.v. Blackburne and the newer J.A.P. power units have points of extreme interest, while lesser known engines such as the C.A.M., the B. and H., and the British Anzani may create for themselves a place in motor cycle history before the year is out. At the present time Tourist Trophy racers are occupying the attention of many designers, and our knowledge in this direction inspires us to say that engine design is undergoing some remarkable changes. One hundred m.p.h. by a 500 c.c. engine has not yet been achieved, but we can prophesy that this is only a matter of time—and perhaps not such a very long time. This is a matter for the "tuning wizard" after the designer has completed his work, for it is certainly true—and we do not think any expert in theory will disagree—that whatever speed can be obtained by means of correct design theoretically, the rider-experts—of whom only a few exist—can improve upon it.



Extending the entire length of the cylinder of the 350 c.c. B. and S. engine is a single reciprocating and partially rotating sleeve actuated through a peg and ball joint in the large timing wheel. Slots at the top cover and uncover the inlets and exhaust ports in proper sequence.



On the Dunelt, the only single-cylinder two-stroke above 400 c.c., a double diameter piston gives a greater displacement of mixture in the crank case than the conventional type.

## BROOKLANDS AS A SOCIAL RENDEZVOUS.

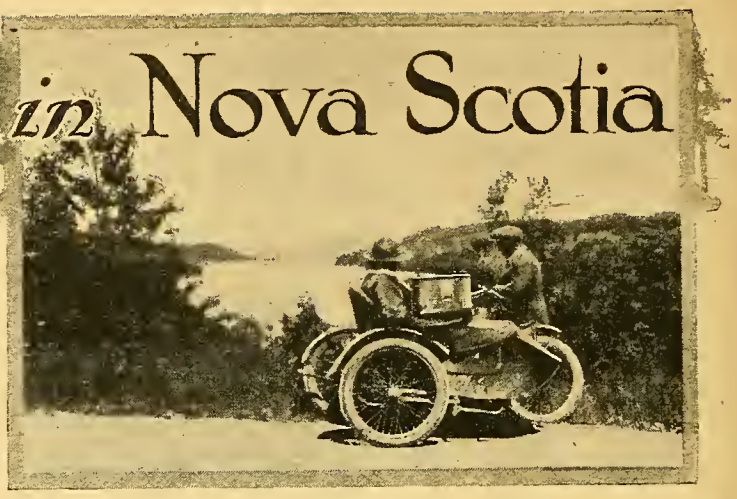
MORE than once has a motor cyclists' country club been suggested, but somehow or other the proposal never goes further than the discussion stage. Southern and London motor cyclists, however, already have an excellent week-end rendezvous in Brooklands, although the attractions of the Weybridge track are by no means generally recognised.

Full advantages, of course, of the facilities of Brooklands may only be reached by becoming a member of the British Motor Cycle Racing Club ("Bemsee" for short), which was founded in 1909 for the encouragement of motor cycle racing, and which, in future, intends, in conjunction with the B.A.R.C., to pay more attention than hitherto to the social possibilities of the picturesquely situated Surrey race-course.

For private motor cyclists the annual subscription is only £3 3s., plus 10s. 6d. entrance fee and 4s. 6d. deposit on the club badge. Trade members pay £2 2s. more. In the case of those who already belong to the B.A.R.C. the subscription is reduced to £2 2s.

Further particulars of the Club, which, incidentally, is affiliated to the A.C.U., may be obtained from the secretary, Mr. T. W. Loughborough, 83, Pall Mall, London, S.W.1.

# Touring in Nova Scotia



Bear River, looking across Annapolis Basin towards the Bay of Fundy.

## A Motor Cycle Ramble through a little-known Province of Canada.

Described by E. B. Holton (U.S.A.).

*"For to admire and for to see, for to behold this world so wide"*

KIPLING said it for us. That was the principal reason why we "cruised" through the Province of Nova Scotia last summer. You do not tour down that way, you cruise. A Nova Scotian looks to the sea for his living, therefore his speech is salty with the tang of it.

The village padre of East Pubnico wondered why we came to his bleak land when we had the White Mountains of New Hampshire and the picturesque Berkshires of Massachusetts far more lovely and nearer home.

But we had already viewed those same scenes, and, while they are magnificent, we had a yearning to go on over the hill to see what is back of beyond.

Nova Scotia is different. Therein lies the charm.

The skyline is different; rugged spire-like pines and spruces, decked in festoons of hoary moss that lend an air of age that cannot be denied. Folks and manners are different. Friendly folk drive oxen yoked to springless waggons and keep to the left. They have time to pass a little gossip with the traveller.

### Customs Formalities.

Nova Scotia is not so far from the United States, but few visit it by motor vehicles. An eighteen-hour boat trip will bridge the gap between Boston and Yarmouth. By land the journey is lengthy and tiresome. Probably the greatest barrier to touring through the maritime provinces of the Dominion of Canada is getting through the United States Customs. We blush for our national pride when we recall the yards of red tape we had to unravel both leaving and returning to the Port of Boston.

Entering the province at Yarmouth, on the southern extremity, there are two post roads that lead towards Halifax, the seat of provincial government. The highway following the Atlantic coast is not so good; still, it could be worse. The route *viâ* the Annapolis Valley and Windsor is wide, and has been improved yearly for the past decade.

Nova Scotia is fully alive to the need of good roads, and has an ambitious programme of highway construction under way. It is planned to spend over £2,000,000 on main routes in the next five years. To understand fully the courage of the citizens of the province in undertaking this constructive work one must realise that Nova Scotia is 350 miles long and 120 miles wide, and that there are but 21,000 square miles of territory, over which 500,000 people are scattered.

Large cities are few and far between, and five miles back of the sea along the Atlantic coast one finds virgin wilderness. While the good roads movement is only beginning, Nova Scotia is far advanced when it comes to highway marking.

### Novel Route-marking.

Due to a group of energetic motorists known as the Nova Scotia Motor League, all the post roads of the province have been marked from one end to the other. A simple system of coloured bands painted on poles, trees, or bridge-abutments guides the traveller on his way through towns or the wilderness. Thus we have the green-band route from Yarmouth to Halifax *viâ* the Atlantic coast, and the red-band route *viâ* the Annapolis Valley and Windsor.

Sign posts erected by the Nova Scotia Motor League, which state clearly the coloured band to follow for various routes.

There are, according to the records, but 137 motor cycles registered in Nova Scotia. This may account for the fact that our Indian and sidecar created a sensation in some localities. At Broad Cove one ancient asked us if the locomotive ever broke down. In Weymouth a man driving a yoke of oxen stopped and volunteered the information that the woman who sat in the cart had

**Touring in Nova Scotia.—**

all the comfort on that "thingamagig." Whole families swarmed out of the house and rushed pell-mell across the front yard to perch upon the fence and have a nearer view as we passed by.

Years ago Judge Haliburton, of Windsor, Nova Scotia, wrote a series of humorous papers of life in the province, and he told of how the good citizens were named Blue Noses. This was the brand of potato raised in the province, and because of its excellence was boasted of by all loyal Nova Scotians.

Leaving Yarmouth, we followed the Atlantic coast side of the province. The roads were not very good, but the charm of the scenery and the hospitality of the people made up for any bumps encountered.

### Fogs from the Icebergs.

During June and July rains are frequent and fogs sift in from the ocean, for icebergs are not far off the land in the early summer. We ran into five days of alternate rain and fog, and were marooned in Lockeport, on the shore of Ragged Island Bay. We were quartered in a hotel that had all the charm of the inns we have read about, but never encountered. The proprietor was a retired sea captain, who could spin marvellous tales of the days of sailing ships, with a delightful Scotch burr. The postmaster and the village Crœsus were nightly visitors for a friendly game of cards.

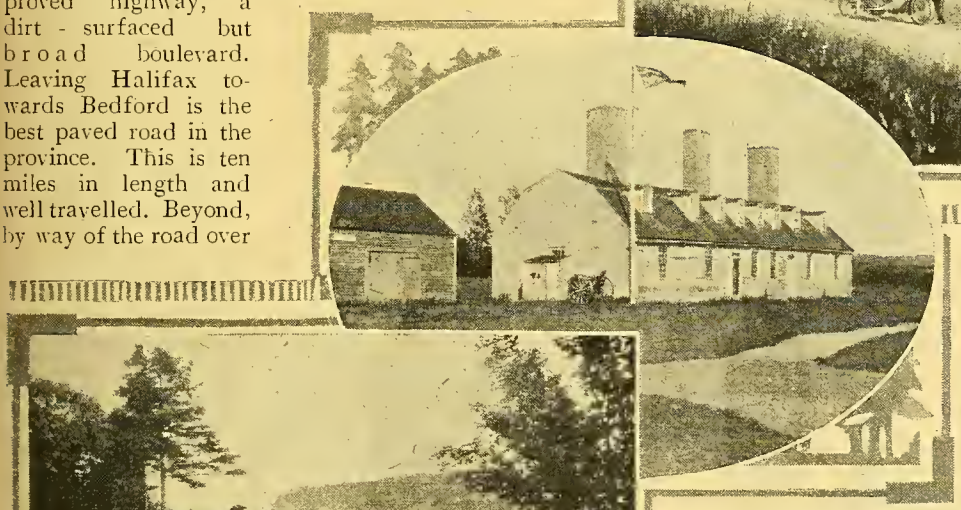
Twenty miles from Halifax we found the first bit of continuous improved highway, a dirt-surfaced but broad boulevard. Leaving Halifax towards Bedford is the best paved road in the province. This is ten miles in length and well travelled. Beyond, by way of the road over the Uniacke Mountains into Windsor, conditions are being bettered by labourers. From that point down through the Annapolis Valley to Digby the main route is good.

Around Windsor is where the highest tides of the Bay of Fundy have been recorded. In Cobequid Bay a rise of 50ft. has been measured during the spring of the year. With the water covering the rivers or bays, many pretty scenes may be noted in Nova Scotia. With the tide out and the slimy red clay exposed and glistening in the sunlight the same views are repulsive.

### A Valley of Sunshine.

On the Bay of Fundy side of the province lies the fertile valley of Annapolis, known as the Garden of Nova Scotia. This is the favoured section, for while rain and fogs envelop other localities, it is uniformly clear and temperate in the "Valley." This valley is sixty miles in length, and wonderful apple crops are picked yearly from the orchards that line each side of the highway for miles.

The Bear River district, famous for scenery and cherries.



Annapolis has been attacked 12 times by pirates, Indians, French, English and New England troops. Here are the barracks erected in 1781, now used as a museum.

Digby Gut, Annapolis Basin. By road it is 50 miles around the basin to the land on the opposite shore.

Sleepy Annapolis Royal is at the head of the vast basin of the same name. It has a history that dates back to 1604, when De Monts, a French explorer, sailed into the bay.

We gave up all hopes of visiting Cape Breton, an island at the north end of Nova Scotia and under the same Government. This section, so 'tis said, is for all the world like the Scottish Highlands.

Such names as Inverness, Ingonish, and Baddeck appear on the maps of Cape Breton—and they beckon.

# ROAD RACING IN IRELAND.

## Five Races held by Ulster Motor Cycle Clubs. Official permission granted. Over 52 m.p.h. Average Speed.

THERE has been much discussion of late regarding road races on T.T. lines, but the matter is usually dismissed as an impossibility. The chief difficulty, of course, is obtaining support from the Government to permit the roads being used as a racecourse. In Ireland this obstacle has been overcome, and during the latter half of 1921 official permission was granted to the clubs of Ulster whereby they were able to add to their programmes several road races.

In these races the starting was on the handicap principle. The reason for this was based, very wisely, on the following factors :

(1.) There were two types of entrants, trade and amateur, and it was only fair to give the latter an advantage, unless he had shown in previous events that he was no mere novice at the game.

(2.) There were machines of different engine power entered, and it was obvious to all who the winner would be if a 500 c.c. or 1,000 c.c. machine started scratch with a 350 c.c. mount. Barring accidents, it usually means a walk-over for the bigger engine.

Thus it can be seen that the handicap was fixed in accordance with the driver's ability and the cubic capacity of his engine.

In the first three of the five races mentioned below the handicapping was done according to the Ulster Motor Cycle Club laws, which club, one might mention, is one of the most up-to-date and go-ahead motor cycle organisations in Ireland.

The 5 mile course situated about 10 miles from Belfast, on which successful Irish road races, organised by the Ulster Motor Cycle Club, took place last year.

### 5 Laps of 5 Miles.

The first race took place on September 3rd of last year at The Temple, which is situated about ten miles from Belfast and about five miles from Ballynahinch. The course was roughly triangular, and was twenty-five miles in length, the laps being about five miles. About nine machines were entered for the event.

The writer was stationed at one of the corners, which was a left-hand one, with a long dropping approach and hump-backed in certain sections. The corner was on the main Belfast-Ballynahinch road, and the continuation of the approach across the main road was used only at the finish of the last lap.

The race was hotly contested, but victory finally rested with a 350 c.c. machine, owned by an amateur, who had ridden with great skill and coolness throughout. The second man home was also an amateur, well known in Ulster competition work. The results were as follows :

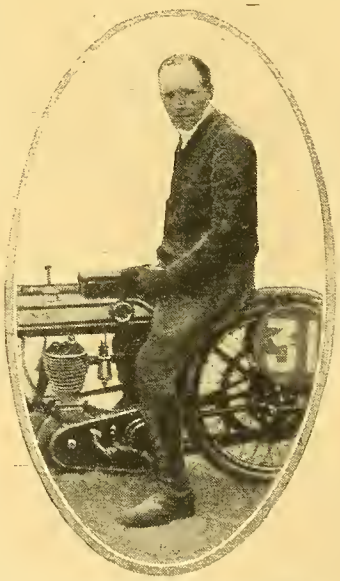
1. T. G. Lindsay (2¾ New Imperial).
2. W. J. White (3½ Norton).
3. Herbert Chambers (2¾ o.h.v. A.J.S.).
4. T. Mallon (3½ Sunbeam).

The presence of three of last year's T.T. riders in these events (J. W. Shaw, a Norton exponent, Herbert Chambers on the wonderful little o.h.v. A.J.S., and T. Mallon, the Irish Sunbeam rider) proved a great attraction. In the opinion of Shaw, the roads were kept as clear as in the I.O.M. This speaks well for the management of, and the interest taken in, the event.

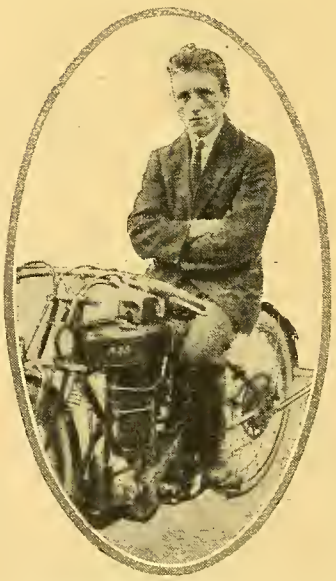
### Lessons in Cornering.

A week later (September 10th) another twenty-five miles race took place at Mill Bridge, Ballynahinch. The course was triangular, as before, in five-mile laps, and with five tricky little corners. One of these corners in particular needed great skill and judgment, as it was only the width of a cart track. The approach was by a fairly fast stretch, which terminated at this left-hand turn.

It was necessary for the riders to change down, as the bend could not be negotiated in safety at a speed of much over 15 m.p.h. Apart from this, once round the corner, the men were confronted by an up gradient, and changing down to bottom was often essential if the revs. were to be kept up satisfactorily.



J. W. Shaw (3½ Norton), winner of the 50 mile road race held on the Ballynahinch course. His average speed was 52.49 m.p.h.



Herbert Chambers (2¾ A.J.S.), who made a great fight for the premier position in the same race, but came in third

**Road Racing in Ireland.—**

I think it would be right to say that more time was lost on this corner by drivers whose skill was not of the best than anywhere else on the course. Those who took it too fast invariably found themselves thrown over to the right of the road on the up grade, and had to do some footwork to get out of the cambered portion and get straightened out again. The man who was following and who changed down, took the corner steadily, and changed up again as the engine took up the revs., gained ten or twenty yards on the man in front. This was most noticeable, and after a lap or two the lesson was learned, and the place treated with more respect.

Before coming up to this corner there was a fast section of road terminating in an extremely deceptive bend. On the approach it seemd to be an easy enough task for a skilled man to get round on half to three-quarter throttle, and it deceived some who perhaps were not too familiar with the course. This section was regarded by a rider whose opinion is not to be despised as the most difficult bit of the route.

### Danger Points Bannered.

The dangerous points were bannered about 100 yards along the approach, and on the corners themselves, as, indeed, all over the course, officials and police were stationed. This race secured twenty-four entrants, about fifty per cent. of whom were amateurs. This time, however, the trade would not be denied, and the results were as follows :

1. H. Chambers (2¾ o.h.v. A.J.S.), handicap 1m.
2. D. Hunter (3½ Scott), handicap 1½m.
3. W. C. Campbell (3½ Norton), handicap ½m.
4. J. W. Shaw (3½ Norton), scratch.

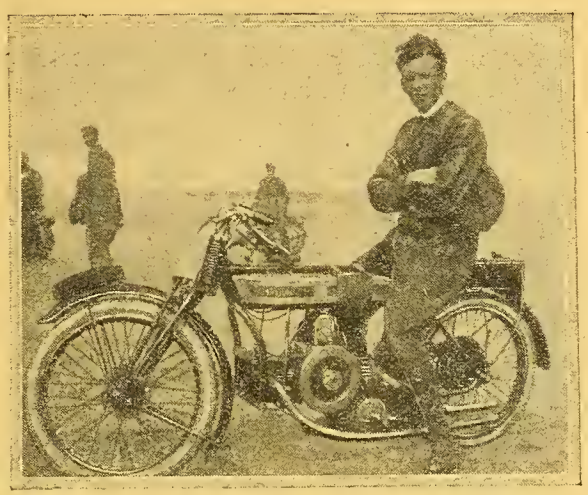
The winner gained the special prize for fastest time.

On October 15th a final road race of fifty miles, under the auspices of the Ulster Motor Cycle Club, was held over the same course as on September 10th. As before it was open to machines of unlimited c.c., and attracted a big entry. The struggle was very keen, and until within ten miles of the finish one could not guess who would get the first place.

On the 20-25 miles lap, Shaw and Chambers had a hot fight for the lead, both coming round the corner on to the up grade with hardly a wheel length between them. At the end of the lap Shaw's time was 5m. 40s. as against Chambers' 5m. 52s.

Fine performances were put up by S. A. Dale (2¾ o.h.v. New Scale) and N. O. Metcalfe (8 Enfield), an amateur. Dale had most wretched luck, as his back mudguard broke at the stand clip, with the result that he rode about twenty miles with his stand trailing. This robbed him of a possible first place, but his ride is worthy of mention as an example of dogged perseverance and pluck.

B. McGivern (3½ Norton), vice captain of the Banbridge and District M.C.C. which body organised several successful road races last year.



T. Stewart (3½ Douglas), winner of the cup given for the fastest time in the one mile open scratch road race, held by the Banbridge and District M.C.C.

R. S. Willis (3½ Norton), captain of the Banbridge and District M.C.C., winner of two of the principal cups last season and prospective amateur entrant for the T.T. races.

### Over 52 m.p.h. Average.

At forty-five miles Metcalfe was leading Shaw by 35s., and was also in the running for the premier award, but unfortunately his petrol supply gave out, and he had to finish fifth. The special prize for the best performance was won by T. Branagh, who made a splendid ride on his 2¼ h.p. Rex-Acme. The prize for fastest time fell to J. W. Shaw (3½ Norton), who made a wonderful lap record, and whose average speed for the entire course was 52.4 m.p.h. The average speed of the T.T. winner last year was 54.49 m.p.h. The results were as follows :

1. J. W. Shaw (3½ Norton), scratch.
2. S. A. Dale (2¾ o.h.v. New Scale), handicap 5m.
3. H. Chambers (2¾ o.h.v. A.J.S.), handicap 1m.
4. J. Kinney (3½ Norton), handicap 3½m.

Two other road races, at which the writer was not present, took place towards the end of the season. A fifty-mile race organised by the Banbridge and District M.C.C. was held at Loughbrickland, which is

**Racing in Ireland.—**

situated about three miles from Banbridge. The course was triangular, and in ten-mile laps. About three miles was clear open road, and the remaining seven very twisty by-roads. Results :

1. J. Finney (3½ Norton).
2. H. Chambers (2¾ o.h.v. A.J.S.).
3. J. W. Shaw (3½ Norton).
4. R. Willis (3½ Norton).

The other race was held by the South Derry M.C.C. at Desertmartin, over a very tricky twenty-one-mile course, with four corners, and laps of 4⅕ miles. After a stiff contest the following men secured the first three places :

1. Jas. Forsythe (2¾ Diamond-Jap).
2. J. W. Shaw (3½ Norton).
3. S. A. Dale (2¾ o.h.v. New Scale).

The use of crash helmets in these races was not enforced, although several of the riders wore them, and the events on the whole were wonderfully free from accidents. The roads were entirely cleared of traffic, and one cannot speak too highly of the management of the races and of the appreciation and interest taken in them by the competitors themselves and the public generally. The latter did everything possible to help the clubs, and harmony prevailed on all sides. A word of praise is also due to the police, who assisted the club officials to make the events successful.

It has been proposed that races for standard motor cycles should be organised on a course near Belfast on June 17th, subject to obtaining permission from the Northern Government. The suggestion is that the motor cycle race should be run in the morning and the car race in the afternoon. SPORTSMAN.

# BRAKING CONSIDERATIONS.

## An Advocate of the Front Wheel Service Brake states his case. Where the Internal Expanding Type Scores.

By G. L. Atkinson.

*The issue for March 2nd contained a long illustrated article on present-day braking systems. Therein the question was raised as to the desirability of having the front and rear brakes of equal power, or whether the rear wheel should be retarded slightly more than the front, or vice versa. Below we give the opinion of a designer who has specialised on motor cycle brake design for many years.*

UNTIL recently brakes have been the least considered and most poorly designed part of a motor cycle, though the necessity for powerful deceleration is of as great if not of greater importance than is rapid acceleration.

My experience proves that during the act of braking on either wheel an increased load is thrown on to the front wheel, thus enabling its tyre to bite hard (through grease) to the solid ground beneath. This increased adhesion and consequent lessened liability to skid should be taken advantage of by fixing the service brake on the front wheel, and using the rear brake in emergency only, or as assistance to the front brake.

This theory can easily be proved by riding a solo machine on a very greasy road when maximum application of a good front brake just short of locking the wheel will effectively retard the machine without skidding or wobble, whereas if the rear brake is powerfully applied, tail wag, if not a skid, will most certainly result; it will be found that the very quickest stop is made by using the front brake at its maximum, and the rear brake not so hard on. I must, however, strongly emphasise the importance of the front brake being so arranged that its maximum effect cannot lock the wheel, which would be worse than no brake at all.

### Unbalanced Thrust.

The dummy rim types have the disadvantage that they exert a heavy unbalanced thrust on the hub bearings, and they also lose efficiency after short usage, by the rim becoming untrue, thus giving a good braking effect in one position of the wheel and little effect in another, which especially on a front wheel will certainly cause a skid to commence. They also —in common with other external brakes—suffer from exposed braking surfaces.

External band brakes in their various forms, including a round section band working on a grooved drum, prove to have a variable braking effect dependent upon whether there is dry dust between the surfaces or liquid mud, mixtures varying between an abrasive and a lubricant, and it is difficult to keep the band clear of the revolving drum when the brake should be off. This type also puts an unbalanced strain on the hub and bearings, but, of course, of lesser magnitude than with the dummy rim type. Car designers used this type extensively, and have now almost abandoned it.

### Careful Design Necessary.

The internal expanding type can, however, be designed to be as powerful as may be needed, yet to be smooth and progressive in action and of constant effect; and, if the return motion is properly provided for, one can be sure it is fully "off" when it should be. It can also be arranged to be almost immediately detachable without a knock-out spindle, or separately detachable hub.

Granted, there is a slight unbalanced thrust even with this type, but it is so slight as to be of little moment, though we have a simple re-arrangement of parts practically to balance the thrust in all directions.

I believe the internal expanding principle is correct, and that this type of brake will eventually supersede all other types at present in use, as has proved the case in car practice; for the problem of effectively braking motor cycles is identical with that on cars.

Readers' experiences and views of different types of brakes should prove interesting, though I would suggest that criticisms of any type be made, not when in a new condition, but after it has been in ordinary use some few thousands of miles. Brakes should wear as well and maintain their efficiency as well as engines.

# IDEAS: USEFUL AND INGENIOUS.

## A Selection of our Readers' Home-made Gadgets, with some Practical Hints on Work in the Garage.

### Preventing Valve Stem Air Leaks.

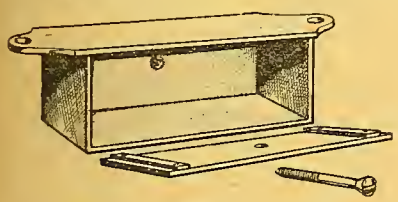
AN engineer reader, Mr. Paul Rea, of Hull, sends this scheme for a valve stem packing gland; it has the merit of simplicity and ease of application. The sketch shows the construction as applied to a 5-6 h.p. J.A.P., but it might be applied to most engines.

A simple valve stem packing gland.

Over the plain valve guide is driven a piece of light brass tubing, about ½in. longer than the valve guide. Felt packing or asbestos string with graphite is forced up for about $\frac{5}{16}$in., and this is followed by a washer which is a sliding fit in the tube. A light spring is interposed between the washer and the valve spring cup. Fresh grease and graphite will be needed every 3,000 miles, but this can be introduced on the point of a knife by pressing down the light spring with a screwdriver when the washer drops.

### Carrying Spare Bulbs.

ALTHOUGH the device submitted by "D.T." (address wanted.—ED.) is constructed of $\frac{3}{32}$in. mild steel plate, no doubt it could be carried out in wood and be equally effective. The top of the box has projecting end lugs, each drilled with a hole, and these holes coincide with the nuts underneath the seat of a Brooks' saddle. On the lid of the box are two locating strips and a screw with a coin

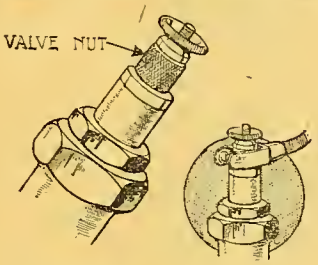


A method of carrying bulbs without risk of breakages.

slot passes through the lid and engages with a nut brazed on the back of the box. A lining of corrugated cardboard is used inside, and a snug space for three spare bulbs is provided. "D.T." does not say on what machine the bulb carrier was used, but he says that there was ample room for it below the saddle as the extreme rear of the latter touched the carrier stays before the box touched the mudguard.

### Snap-on Plug Terminal.

SCOTT machines are fitted with spark plugs having ball terminals, and they have clip-on terminals on the wires. If another make of plug is to be used, it sometimes happens that the brass ball

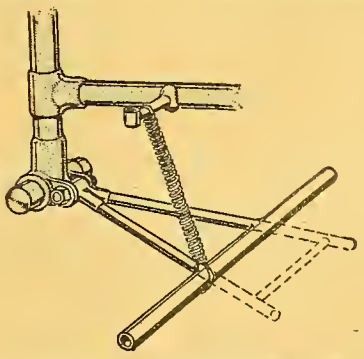


A tyre valve nut as a Scott terminal adapter.

will not screw on to the central electrode. In such circumstances, Mr. A. K. Fitton, a Scott enthusiast, of Dewsbury, uses a tyre valve top nut secured beneath the ordinary terminal nut. The snap-on clip gets a good grip on the knurled surface of the nut.

### Prop Stand for a 2¾ h.p. Douglas.

IN the A.S.C. motor cycle dumps we didn't love the Douglas front stand (did you, reader, ever *have* to drag one of these machines, with buckled wheels and

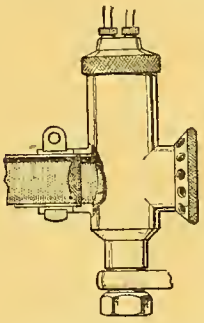


An easily constructed prop stand for Douglas machines.

shell-shattered frame, *backwards* over broken ground?). Therefore Mr. E. S. W Eardley's idea is seized on with joy, having poetic justice in it, for the stick-in-the-ground prongs of the stand are sawn off, the legs shortened, a foot or more of ¾in. tube brazed across the base of the triangle. A coil spring joins the stand cross-bar to the gear-rod bracket. In use the stand is pressed down by the left toe and the machine leaned over on to it. When starting away again bringing the machine into the vertical position allows the stand to spring up.

### Improving Vaporisation.

WITH the idea of preventing blobs of liquid petrol reaching the cylinders, Mr. R. J. Slone, a North London reader, has fitted a very cheaply made vaporising device to his air-cooled Humberette V twin engine. It consists of a piece of coarse wire gauze—taken from an old coffee strainer—cut in a circle ½in. larger than the inlet pipe carburetter stub. This gauze disc is pressed into the recess of the carburetter, where it fits on to the pipe and is dished out towards the engine, and the carburetter tightly clamped in position. This fitting has been found to help starting-up and to improve general running, so never mind the guid-wife's complaints about the coffee strainer. Anyway, gauze can be purchased.



Gauze screen in the inlet pipe to give better vaporisation.

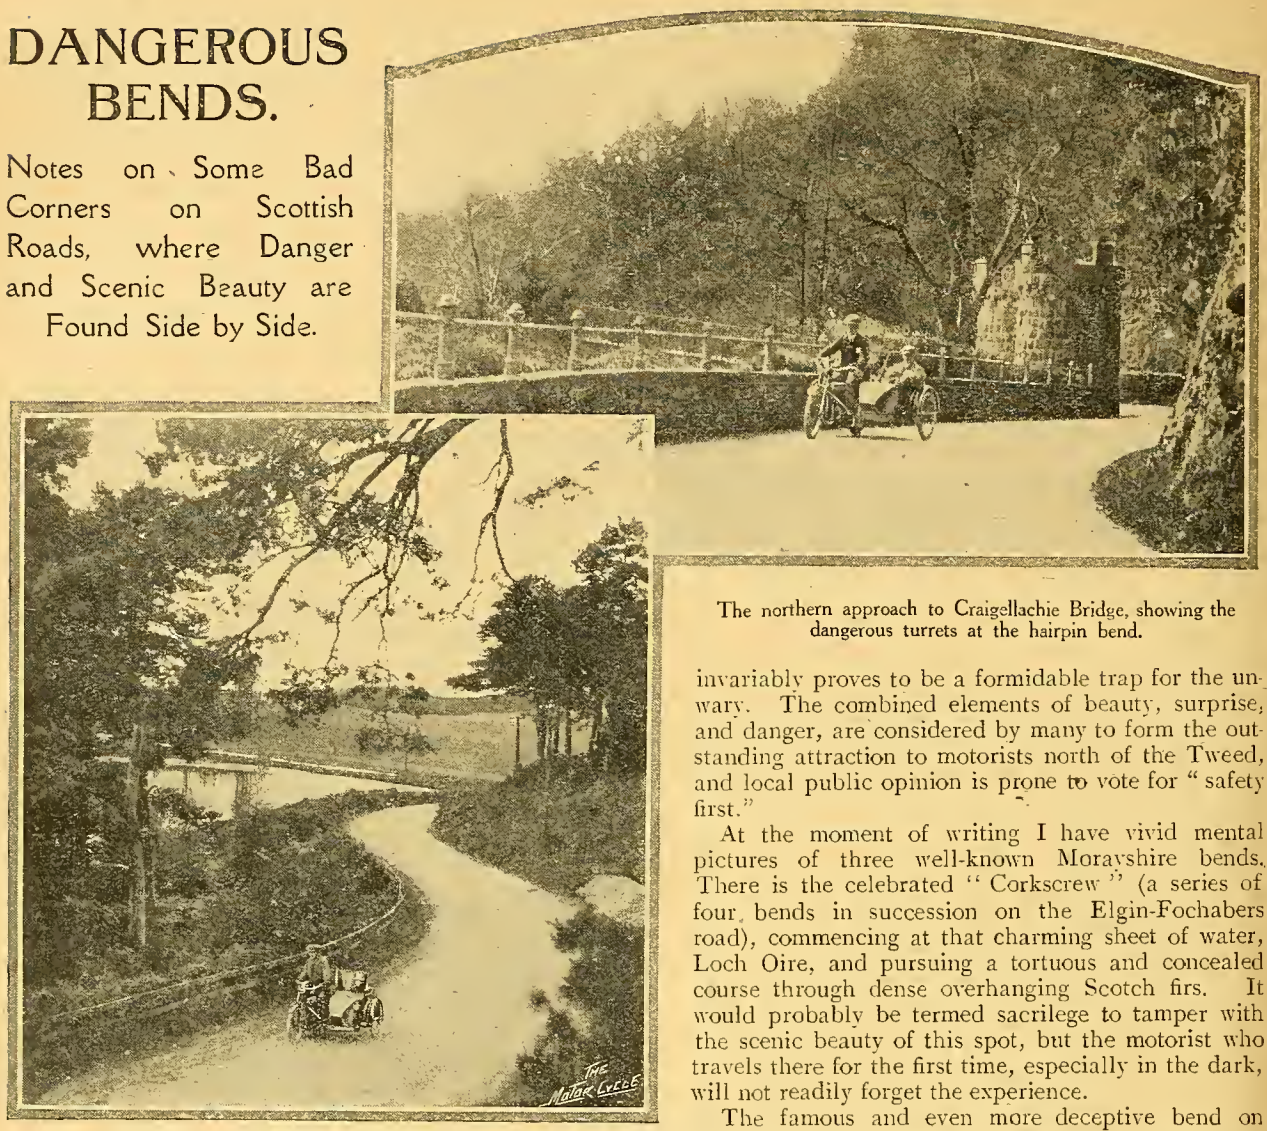
### A Makeshift Contact Breaker Cover.

HERE is a little makeshift idea which might well be adopted permanently on many machines, especially in the case of certain engines with outside flywheels where the magneto contact breaker is so close behind the flywheel rim as to be difficult of access. Our reader, Mr. F. Hoggett, may be allowed to use his own words:

"Having lost the cover for the contact breaker on my C.A.V. magneto, I hit on the idea of using a watch glass. One was chosen which had a good hollow shape. The friction of the metal spring is sufficient to retain it in position. The turning, etc., can easily be seen without removing the cover, which is very useful in wet weather."

# DANGEROUS BENDS.

Notes on Some Bad Corners on Scottish Roads, where Danger and Scenic Beauty are Found Side by Side.



The northern approach to Craigellachie Bridge, showing the dangerous turrets at the hairpin bend.

Loch Oire, Morayshire, and the road near the "corkscrew" bends.

A CAUTIOUS motor cyclist recently expressed the opinion that our official road warning signs are situated too near the points of danger. That view may not be generally accepted, but most tourists will agree that Scotland has more than its share of difficult road bends.

It is a curious coincidence that, in the Highlands in particular, danger and beauty lie side by side. In Glencoe, for example, where so many serious motor mishaps have taken place, it is suggested that the dominating power of the huge mountain masses claims the attention of the driver, it may be at the critical moment when concentration on the handle-bar is absolutely essential.

### Traps for the Unwary.

I refer more particularly, however, to that well-known type of abrupt road bend or bridge crossing entirely concealed from view by its sylvan garb, and which invariably proves to be a formidable trap for the unwary. The combined elements of beauty, surprise, and danger, are considered by many to form the outstanding attraction to motorists north of the Tweed, and local public opinion is prone to vote for "safety first."

At the moment of writing I have vivid mental pictures of three well-known Morayshire bends. There is the celebrated "Corkscrew" (a series of four bends in succession on the Elgin-Fochabers road), commencing at that charming sheet of water, Loch Oire, and pursuing a tortuous and concealed course through dense overhanging Scotch firs. It would probably be termed sacrilege to tamper with the scenic beauty of this spot, but the motorist who travels there for the first time, especially in the dark, will not readily forget the experience.

The famous and even more deceptive bend on bleak Dava Moor near Grantown-on-Spey, has at last been straightened out without materially altering the face of the landscape.

### A Drastic Improvement.

To-day a spirited newspaper controversy rages round the suggestion to remove one of the turrets of Craigellachie Bridge, that elegant and historic structure designed by Telford, and spanning one of the finest reaches of the River Spey. The trouble there takes the form of a vicious turning at the northern approach to the bridge, where one of the turrets obstructs the view of approaching traffic. Excellent arguments have been put forward in support of the removal of this obstruction, but those who advocate "no change" claim that the cure is worse than the disease, and that motorists are tempted to take undue liberties where the danger zone is exposed to view. So our careful motoring friend adds, "Better retain the charm and beauty of our hidden road bends, and encourage safe driving." ALEX. B. BEATTIE.

The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

### *DESIRABILITY OF A 75lb. LIGHTWEIGHT.*

Sir,—Under the heading of "Current Chat" opinions are invited as to the desirability of a miniature motor cycle, of about 75lb. weight, and selling at about £30.

As one of the public I think such a lightweight is wanted, but with the further addition of a free engine and clutch; this, with a low saddle height, say, 27in. or 28in. from the ground, would, with pedalling gear, enable the rider to start already mounted, and to stop in traffic without dismounting. I have a J.E.S. miniature, and it is a splendid little mount, but lacks a free engine, so I have to make a running mount, and this I find dangerous, especially in traffic.

To the rider advancing in years, to ladies, and to the timid, such a lightweight would be a great inducement to take up motor cycling. C. GOFF.

Sir,—I certainly think there is a big market awaiting a *real* lightweight, but I submit that on no account should a clutch be omitted. Elderly men, disabled men, and business men with numerous calls to make, and who want to start easily and quickly, are the most likely buyers. Also most of the customers for this class of machine live in small houses or flats, and "wangling" a machine into an awkward corner and getting it out again is twice as easy if the engine can be declutched. In thick traffic, too, it would be a boon to be able to declutch and pedal. Anyway, the introduction of such a machine spells progress, and should be cordially welcomed. C. G. NEW.

Sir,—I think there are thousands of men who are only waiting for such a production. If the average man who now "push-cycles" to and from work could only obtain a light power-propelled, pedal-assisted cycle, using ordinary push-cycle fittings, such as tyres, tubes, lamps, saddle, etc., especially the first two-mentioned, at a figure around £25, there would be a good market. GEO. R. WILLIAMS.

Sir,—There are no doubt a great number of working men, like myself, who have from ten to twenty miles per day to cycle the year through to and from their employment and require a reliable and trustworthy mount to knock off some of the pedal-slogging of the push cycle, at a price within the reach of one of very limited means. MECHANIC.

Doncaster.

Sir,—I have no doubt that a very large number of prospective motor cyclists will—like myself—read with much interest that a well-known firm of motor cycle manufacturers are contemplating producing a real lightweight about 75lb. in weight, with two-speed gear box, at a price somewhere in the neighbourhood of £30. Such a machine would, I feel sure, "catch on," and I believe there would be a big demand for it. Speaking from a personal point of view, I might mention that I only turn the scale at 5st. 5lb. in weight, and am not fit, physically, to handle the majority of machines at present on the market (not even a Levis), and it seems hard luck not to be able to enjoy the open road on account of the general run of machines being too heavy.

It is to be hoped—in view of the approach of better days—that the manufacturers will bring out the machine at an early date, if they finally decide to manufacture; I think there would be a good response from the public.

C. EVANS.

### *"ONE MAKE OR MANY?"*

Sir,—In the article "One make or many?" the view of the "faithful follower" is very well expressed and is almost convincing so far as it goes—but what a short distance that is!

Perhaps without undue levity we may call the man who season after season remains faithful and constant to one particular type of machine, the staid and respectable much-married member of the motor-cycling brotherhood; he has chosen his one mechanical spouse for better for worse, till death do them part; but we others, who are a little unkindly referred to as "butterflies" are in the more carefree, happy state of single bliss—we flirt and play with many makes, we will finally surrender to none.

Nor is the reason, as might at first sight be supposed, simply our fickleness and changeability; it lies a lot deeper than that. If we may borrow a term from horsemanship, there are men who possess motor cycling "hands"; that is, who have an almost indefinable sympathy with and comprehension of their machines, who can tell by the general feel and tone of an engine just how to coax and humour it, who driving under identical conditions with other riders will manage to get just that little extra power which no engine will yield up but to such as understand it. And such a rider as this can never be content to stick unchangingly to one particular type of machine; no matter that on his new 6 h.p. twin the controls open inwards, whereas on last year's 3½ h.p. single it was outwards; no matter that last season his girl sat on a Tan-sad and that this she lounges in a sidecar; no matter that it's rigid frame and acetylene this summer, perhaps next it will be spring-frame and a dynamo; flat-twins, singles, twins at 60°, chain-cum-belt, all chain, air-cooled, oil-cooled, whatever you will, we must sample them all and know that fine feeling that no matter what its make and peculiarities, we have not to be astride any engine for more than a day or two before we know it, and it knows us, and that we are getting the best out of it. LAURENCE, W. M.

London, W.C.1.

### *ROAD CAPABILITIES OF AN AMERICAN FLAT TWIN.*

Sir,—I quite agree with "Four-up-Solo" in his claim to do 60 m.p.h. on his 4 h.p. Harley-Davidson, as I have attained 55 m.p.h. with a pillion rider on a similar machine. My consumption works out at about 80 m.p.g.

I have covered a little over 12,000 miles (11,000 with a pillion rider) and have not, bar punctures, had a compulsory stop. The original Goodyears are still in service and good for another 1,000 miles. XA-6254.

Birmingham.

### *40 M.P.H., FOUR UP, SOLO.*

Sir,—While not wishing to be rude to any correspondent of *The Motor Cycle*, I really must remark on the letter from "Four-up-Solo." I submit that this writer, who talks of 50 m.p.h. with two adults on the carrier and 40 m.p.h. with three on the carrier is quite out of place on a motor cycle. An asylum is the place for him; not for his own protection but for the benefit of inoffensive taxpayers who desire to use the high road in comparative safety.

Leeds. "RUFF RHODES."

Sir,—Referring to your correspondent "Four-up-Solo," who says that by speedometer he has occasionally exceeded 50 m.p.h. "with two on the carrier" of his 1922 4 h.p. Harley, and also exceeded 40 m.p.h. "with three on the carrier," and this on a main road, will he kindly say how he arranges the straps to keep so many *parcels* on the carrier at such speeds? J. REYNOLDS.

### *THE LURE OF THE FREAK TRIAL.*

Sir,—Your leading article on freak trials will be gladly read by all colonials and touring motor cyclists who are seeking for the machine which will be as docile and reliable as a good car.

One can quite understand riders with racing machines not liking such trials, as speed takes second place.

The machine that will score in a freak trial will be one that has a controllable engine, which is necessary when picking one's way through stones and boulders, washouts, etc.

Good gears (three- or four-speed) and well-designed clutches will also help the rider in climbing sudden rises, negotiating twisty country lanes, etc. The wheel clearance must be ample to prevent wheels catching with mud, grass, etc., likewise the transmission has to be well protected to be free from the same troubles.

We then come to the well-balanced machine with a low centre of gravity and good steering which will gain marks on hairpin turns, twisty roads, etc. This machine will be easy to ride "hands off" on an ordinary road, and steer easily with one hand on rough lanes when changing gears.

Last, but not least, a freak trial is the only sure test for a spring frame or saddle. S. HENDERSON.

### *POSSIBILITIES OF THE WIMSHURST INFLUENCE MACHINE ON I.C. ENGINES.*

Sir,—As you are interested in all matters concerning the advancement of such engines, I feel that the subject of the application of such an instrument as the static electrical machine might very well engage your attention with a view to some suitable instrument being evolved for producing the spark for internal combustion engines.

I have for a very long time studied this branch of science, chiefly in connection with the generation of X-rays, so would like to state my views upon the question of its adaptability or otherwise.

In the first place, it would be quite impossible to use the static machine in its present state of development on account of its very erratic performance due to climatic conditions, but chiefly because there has been no means discovered of satisfactorily insulating the various working parts. It is because of this latter reason that when the influence machine is working at its best (and the presence of the discharge developed is really enormous) it is incapable of giving out more than 5% of its theoretical output.

Could the state of development of the static machine be brought to the same stage of perfection as, say, either the dynamo or magneto, for instance, we should undoubtedly have one of the most powerful instruments possible for obtaining a tremendous secondary or high-tension current, and that with a minimum of energy and simplicity.

The writer has often regretted that more money and time have not been expended in this branch of science, for a perfected static machine would be much superior to the induction coil for all purposes where a high-tension current is needed, and he has often demonstrated the superiority of the current obtained from the influence machine over that obtained from a very expensive induction coil for X-ray purposes, as frequently a tube which a 10in. or 12in. induction coil will not work properly can, in the writer's hands, be made to fluoresce beautifully with a static machine of only 5-6in. spark length. When one compares the effective efficiency with the above results, which is 5% in the case of the static machine and 50% in the case of an induction coil, of their theoretical output, it is surprising and disappointing to find that the work of research and development has been left so long in the hands of a very few keen individual scientific workers.

In conclusion, I would like to point out that I see no reason whatever why a static instrument for internal combustion engines cannot be made and only weigh a matter of, say, 10 or 12 ounces instead of the weighty cumbersome magneto weiging *x* lb. FREEMAN LEE, D.B.O.A.

### *GEAR CHANGING DIFFICULTIES ON A ROVER.*

Sir,—The Rover, though in many ways an excellent mount, is cursed with the dual-purpose blight. This is especially noticeable in the gear ratios employed, which are utterly ludicrous for solo work. I have only once used my first speed, and that was when starting up in the main street of Bridgnorth, halfway up the hill! It wasn't really necessary then.

Thus it is seen that I have cut the Gordian knot by starting off every time in second gear. In order, however, to avoid making a noise like a London taxi driver, I use the dog engagement of low gear to stop the countershaft dead with the clutch out, and then bring the lever smartly forward into second speed (the gear engagement). A little practice will make the change from second to top easy of operation without the use of the clutch.

Changing down to second again should not be done above 18 m.p.h., as the gap between the ratios necessitates a considerable increase in engine revolutions. Here, again, the clutch can be dispensed with. Naturally, the engine is throttled when changing up, and opened out when changing down.

If one must start off in low gear, the secret is to change up the moment the machine has started moving, and not to allow the engine to "rev." too highly before throttling to change.

In passing, I should like to ask Mr. Tourrer what his usual maximum speed is.

LINESHOOTER.

IN THE LAND OF SUNSHINE. Good and well kept roads in and around Alexandria, Egypt, have in a great measure helped to popularise the motor cycle in that city. The fine avenue of palms, with the Ariel in the foreground, is in the Nouzha Gardens.

## EXPERIENCES WITH SOLO BIG TWINS.

Sir,—In throwing myself into print about the 8 h.p. heavyweight, I suppose I ought to state my qualifications. I am an all-weather motor cyclist who has covered 8,000 miles on an 8 h.p. Sports Zenith, and 10,000 miles on a 7-9 h.p. Indian, both ridden solo. In compiling this mileage I have acted as most hard-riding men would—that is, I have given my machines plenty of petrol, oil, adjustments, and last, but not least, hard work. As an average run I might instance one on each machine—Cambridge-Felixstowe, 65 miles, in 1h. 45m. on the Zenith, and Cambridge-Hull, with two up, 120 miles, in 3h. 35m. on the Indian. The last ride was disastrous, as the luggage was carried in a cushion cover, on which 14½ stone of passenger sat, greatly to the disgust of the tooth-paste, toothbrushes, and comb.

The only similarity in the two machines is in horse-power, and in widely differing ways they are as near perfection as possible, except on a wet day, when the Zenith drops 50 per cent. in pleasure-giving, due to belt-slip. The maximum speeds are about the same—65m.p.h. when in good tune—but the methods of obtaining these speeds are at opposite ends of the scale. The Zenith ticks over with a gentle burble, and dead silence of transmission, while the Indian drones like a bumble-bee at 4,000 r.p.m. On average speed I regret to say the Yank wins by miles, owing to its superior acceleration and two excellent brakes. Why do British manufacturers fit one brake and one rim-scratcher? America wins again on steering and steadiness on grease for a reason which I give later concerning centre of gravity. Where the English machine scores is in economy—90 m.p.g. as against the American's 75 at fast touring speeds. Accessibility is also better, as the Indian is tightly packed into the frame, and requires all sorts of wangling and bad language to remove the cylinders. However, the low compression and mechanical oiling of the Indian doubles the decarbonising period, so all is well.

The replacement question, which seems to be the bogey of prospective big-twin buyers, seems to have given me a miss in baulk. They are as follows: 1 belt and 6 piston rings on the Zenith, and 1 kick-starter pinion, 12 rings, cam-wheel bush, and little end bushes on the Indian—total cost £5 7s. 6d., or about 15 miles per penny. The tyres on the Indian are still good for many more miles.

The present-day British 500 c.c. single is a marvellous machine, but having ridden an excellent sample, give me the big twin every time, as pins-and-needles are not really pleasant when having a slight speed burst. Also the real lover of his machine likes to get the best out of it, and "decoking" on the twin is not required nearly so often. I travelled once on the Indian in company with a kindred spirit on a hot-stuff "3½," who could do about five miles an hour more than I, yet he repeatedly had to ask me to slow down, as he was getting bumped to pieces on roads over which I was gliding on my 3in. tyres and spring frame. Also, he was left on every curly hill, as his acceleration was much inferior.

A point which I have not heard put forward in favour of the heavyweight is the lower *total* centre of gravity, which helps it to steer better and hold the road. Assuming the weight of a big twin to be 400lb., and its centre of gravity 15in. from the ground, and the rider's weight 150lb. and his centre of gravity in riding position 35in. from the ground, then the centre of gravity of the whole is $15+\frac{150}{400}\times 20\text{in.}=22.5\text{in.}$ from ground level. Now take a 3½ h.p. machine weighing 250lb. and having its centre of gravity 13in. from ground, while the rider's weight and centre of gravity remain as before. The centre of gravity of the whole is then $13+\frac{150}{350}\times 22\text{in}=24.2\text{in.}$ from ground, or nearly 2in. higher than the twin, although the machine's centre of gravity is 2in. lower than in the previous case. Obviously it is the total centre of gravity which comes into account, since no one wants a machine to be stable unless he is in the saddle.

In conclusion, I may say that for sheer unadulterated pleasure in long-distance high average work, with comfort thrown in, the big twin beats the hot-stuff "3½" by miles, and I hope that it is not quite so doomed as the 500 c.c. brigade would have us imagine.

Luton, Beds. VELOCITAS.

## "BRAKING SYSTEMS OF TO-DAY."

Sir,—From an illustration before me the suggested round section front hand brake mentioned on page 270 ("Braking Systems of To-day") would appear to have been in use on the Phœnix trimo. SOUTHCOMB MAY.

Sir,—I was much interested in the article, "Braking Systems of To-day," and heartily endorse the writer's misgivings about Bowden control for service brakes.

In 1920 I owned a 6 h.p. outfit on which the rear brake was actuated by a stout Bowden cable. This system appeared to be quite satisfactory, until one day, when descending a steep hill, the wire broke clean in half (inside its casing), leaving me brakeless. (The front brake was of the useless horseshoe type.) I just managed to bring the outfit to the bottom of the hill safely in low gear.

W. M. HISLOP.

Sir,—Braking is a matter which does not receive the attention which it should. Since my pedal cycle days I have had a great aversion to front-wheel braking, and my present 2½ h.p. mount has no front brake. Incidentally, but I must lower my voice, it has only one back brake; this, however, is so efficient and works so smoothly that, if it does not satisfy the law, it certainly satisfies my conscience. It is extremely difficult to get efficient and at the same time smooth braking effect on the front wheel. For really efficient braking I would advocate an inside belt-rim brake on the rear wheel and an internal-expanding one on the front wheel.

I hold that when applying both brakes at once, even on a steep gradient, the back brake should be applied more harshly than the front one. I have experimented considerably with different brakes, and I agree with the writer that a light external contracting brake of the type he mentions on the front wheel would be much more satisfactory than the —to me—abominable horseshoe design. Designers just now, I think, are too much concerned about whose production will go fastest to worry about whose machine will stop most quickly. J.M.

Edinburgh.

## REVERSING A TWO-STROKE ENGINE.

Sir,—The letter in your columns under the above heading is very interesting. Of course, any engine of the simple two-stroke type in which the reciprocating motion of the piston is utilised to serve the purpose of a valve for the ingress and egress of the gas, may be run equally well in either direction, as the "timing" of the ports is the same for either rotation.

The only factor which governs the direction of rotation is the timing of the spark. An example of this is to be found in the "Evinrude" outboard marine motor. The earlier models of this engine were fitted with battery ignition, using a plain coil and make-and-break contact breaker, sufficient range of movement being allowed to the timing lever to permit the engine to be run either forward or backward. The engine could be started up, and would continue to run equally well in either direction; it was also possible to reverse the engine direct while it was running slowly. The later models of this engine have a flywheel magneto and a reversing arrangement on the propeller, so possibly the flywheel generator does not permit the engine to be run backward. The writer has had no experience of this generator, but has experimented with an ordinary high-tension magneto, which would not allow the engine to reverse, as it would only spark when running in the direction for which it was intended.

Your correspondent refers to a Maglita set as having been fitted. It is possible that the face cam with which this instrument is fitted will allow it to spark in either direction, as the writer has a Bosch starter magneto, such as was used to start the engines on the big German aeroplanes. This is fitted with a face cam contact breaker, and will spark equally well whether rotated clockwise or anti-clockwise.

It is also mentioned that there is a slight change in the exhaust note. This is probably due to the slight difference in timing due to the contact breaker running backwards, as there does not seem any reason why the exhaust note should differ otherwise. C. E. CLARK.

Cologne.

### THE A.C.U. AND PRIVATE TRIALS.

Sir,—Mr. T. W. Loughborough in his defensive article in this week's issue of *The Motor Cycle* makes a statement that motor cycling in this country is governed not by the trade but by an association of private enthusiasts who have no axe to grind. This being his opinion, it is singular that the organisation which he represents resents the freedom of the individuals it professes to serve. Viewed with an open mind, the policy of the A.C.U. would appear to be *restriction* instead of *expansion*.

Probably 99 per cent. of the motor cycles sold in this country belong to people who are not members of any club or association, and a very small proportion of the remainder ever enter the big trials organised by the leading clubs and the A.C.U.; in fact, the majority of the entrants in these events are from the trade. The salaries, expenses, entrance fees, and other items connected with competitions from a trade point of view amount to a considerable sum in the course of twelve months, and this expense is distributed over the year's output, and eventually paid by the public. The public in turn are asking for reduced prices of machines.

It would therefore appear that there is no useful purpose to be served by the continuance of the A.C.U. in its present form. Relieve the manufacturer of competition expenses and expect a slight reduction in price. This would possibly suit everybody, as the manufacturer would be saved the trouble inseparable from these events, and at the same time would derive considerably more publicity over a larger area by the large number of local competitions held throughout the country, and participated in by people who have bought and entered their machines in events framed for their requirements, and within their capabilities. The failures would be far fewer than in the ultra severe trials of the present day, and the general public throughout the country would hear of successes everywhere. This is just what the trade wish for. Lots of publicity and no expense.

CLIFFORD WILSON.

[Our correspondent evidently uses "99 per cent." as a figure of speech. Out of 370,000 British motor cyclists, about 50,000 are members of the Auto-Cycle Union alone. —Ed.]

### "VALVE BOUNCE MADE VISIBLE."

Sir,—I read with some interest the description of the oscilloscope in your issue of February 16th.

This is surely not such a revolutionary invention as might be imagined, for it is only another phase of the Stroboscopic method.

In fact, by utilising a rotating shutter with an aperture, such as is used in a cinematograph, rotated at 101 per cent. the speed of the half-time shaft of a four-stroke engine, and constructing it so that the aperture on the rotating shutter registers with one in a stationary disc once per revolution, the necessity for introducing electricity as an agent and that for darkness are avoided.

The two discs can be incorporated in a miniature telescope on a rigid stand, and a flexible drive taken from any convenient point on the engine.

Again, by having the apparatus independent of the engine and driven by an electric motor governed by a suitable rheostat, any effect can be produced, apparent motion backwards or forwards at any speed, or a complete synchronisation when the mechanism under observation will appear to be stationary.

R. A. DENNE.

### COMPARATIVE COMPRESSION RATIOS.

Sir,—A few weeks ago a query was raised in your Correspondence columns regarding the marvellous claims *re* compression ratios made by several correspondents of the "hot-stuff 'bus" order. I believe 5.9 was claimed as being standard on the Sports Sunbeam. I was informed quite recently that the B.S. Norton had a compression space of 100 c.c., and my informant was a well-known competition rider. I hate to appear a "doubting Thomas," but these claims seem rather tall, and I was hoping that some correspondence on the subject might result from the afore-mentioned correspondence.

CURIOUS.

Petit-Quevilly.

### WHICH SIDE DO YOU FALL ON?

Sir,—Having just sustained a tumble, resulting in sundry damage to the *left-hand* side of my machine, I am reminded of the well-known fact that in nine cases out of ten it is the left-hand side of the unlucky motor cycles which needs repair after such mild accidents as skidding, falling over, etc. In support of which, note that most solo machines have all their expensive and vulnerable details attached to the right-hand side.

I have also had three sideslip tumbles on pedal cycles, a friend of mine also having three of these to his credit. In every case the fall was on the *left-hand* side.

On reflection, it would seem obvious that the camber of the road would cause a fall on the *right* side in cases of sideslip. But the usual result is just the opposite!

I suggest that involuntary, reflex, or instinctive action, as you like to call it, makes one wrench the machine over to the right to correct a left-hand slide, the result being that one has gone too far, and the fall on the left side follows.

LESLIE LYONS.

### IS THERE AN AGE LIMIT?

Sir,—I am 58 years of age, fairly active, but not very robust. I used to own a motor car before the war, but cannot afford to keep one now. I have recently come to live in the country, and badly want some mechanical means of locomotion for myself and wife, and am thinking of buying a sidecar outfit. We should not be going in for long tours, but should like to see something of the countryside. The question is, am I too old for this sort of sport? I do not want to expend £100 or more on a machine only to find that I cannot use it without getting too tired or suffering from backache.

Would some of your elderly readers advise?

R. E. PALMER.

[Fifty-eight is certainly not the age limit for motor cycling, as many of our readers can testify. A well-known rider in last year's T.T. race has nearly reached this age. —Ed.]

### SUMMARY OF CORRESPONDENCE.

Three accessories are recommended as the result of considerable experience by Capt. A. D. Pryor; they are the Cuthby tyre, the Best mechanical pump, and the Derricott spring saddle-pillar, all of which are fitted to his 3½ h.p. Sunbeam.

Referring to "Ixion's" request for a "perfect goggle," Mr. Geo. T. Dalton puts forward the claims of an article he produces. On the same subject, Mr. A. T. Perrit asks for a really satisfactory "anti-fogging" paste for glasses.

Chain troubles on a Scott, according to Mr. R. H. Playfoot, are entirely eliminated by substituting Coventry silent chains and sprockets for the standard primary drive.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

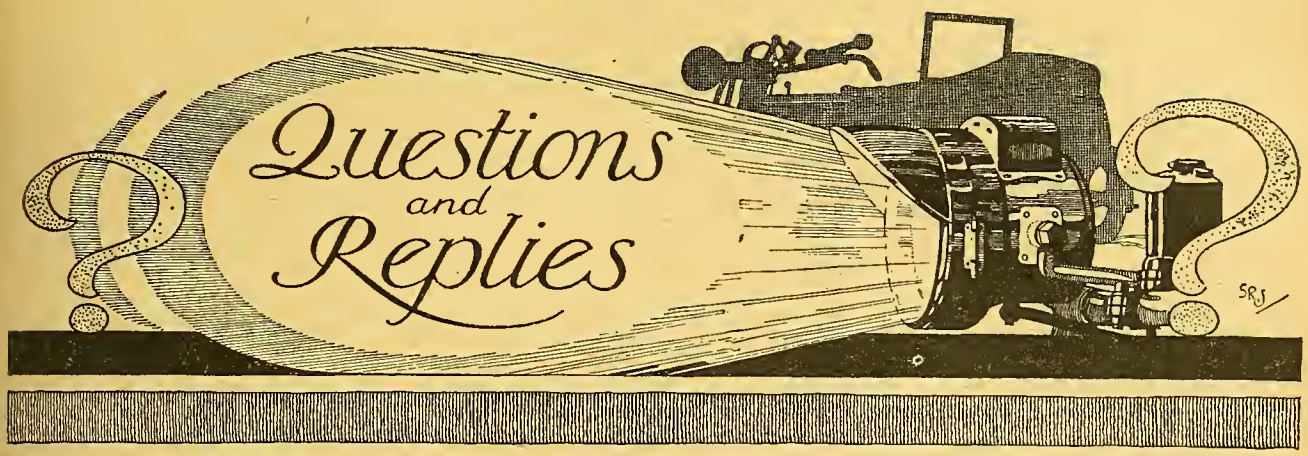
**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Price net, 5/-. By post, 5/3.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### TECHNICAL DATA WANTED.

What is the approximate average cubic capacity of explosive mixture burnt per explosion in a two-stroke engine of 211 c.c. gross at the following different speeds on the level: 10, 20, 30, and 40 m.p.h.?—E.H.

It is quite impossible to give you the figures which you require relating to any particular engine unless we know the gear ratio and also the volumetric efficiency of the engine at all speeds; it is doubtful if even the engine manufacturers themselves could give you the figures.

### METAL PLATE CLUTCH IN GEAR BOX.

My B.S.A. 1918 countershaft gear box, three-speed, is difficult to use in traffic, as the clutch plates do not disengage when running, and it also throws out oil.—E.H.H.

The clutch trouble may be due to wear in the operating mechanism or clutch push rod, or it may be that the splined clutch shaft has worn unevenly and so that the clutch plates bind on it. You will appreciate, however, that this type of clutch is never so free as a high-speed dry-plate clutch of large diameter, and it is specially susceptible to the gumming action of thick oils. Carefully wash with paraffin and use clean oil. Regarding the oil leakages from the gear box, we cannot ascribe a cause to this, unless, of course, the bearings are worn.

### METALLIC CLATTER IN ENGINE.

My Brown twin developed a metallic clang. I fitted a new big-end bush (there was about $\frac{1}{32}$ to $\frac{1}{16}$ play), new piston rings and balanced engine, but there is still the metallic clang. I took the engine down again and fitted washer to the driving shaft, reducing the side play to $\frac{1}{32}$. Although the engine is improved on balance and running, I still get this clang. It is more pronounced when starting up on free engine and running light, but almost disappears when taking a stiff hill at about 15 to 20 m.p.h. on top gear.—E.H.H.

From your description there is no apparent reason as to why the metallic noise arises from your engine, but such a trouble, especially when it disappears as the load on the engine increases, is usually associated with badly worn bearings, very slack fitting pistons, or some other loose or worn part in the mechanism.

## Important Dates.

**Sat., Mar. 18th—Victory Cup Trial.**
**Sat., Mar. 25th—East Midland Centre A.C.U. Open Reliability Trial.**
**Sat., Mar. 25th, to Sun., April 9th—Tour de France.**
**Sat., April 1st—Western Centre A.C.U.—Open Reliability Trial.**
**Sat., April 8th—B.M.C.R.C., Members' Meeting at Brooklands.**
**Fri., April 14th, and Sat., April 15th.—M.C.C. London-Land's End Run.**
**Sat., April 22nd—N.-Eastern Centre A.C.U. Open Reliability Trial.**
**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 mile sidecar race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish twenty-four hour Open Reliability Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**

### MAIN ROAD TRAFFIC RIGHTS.

(1.) It is generally understood that main road traffic has the "right of way." (2.) Does this mean that side road (not main road) traffic entering or crossing main roads must give way to main road traffic before doing so? (3.) In the latter case, would it be held that main road traffic has priority over side road traffic.—KNUTSFORD.

(1 and 2.) There is no legal ruling which gives main road traffic the right of way, for the very good reason that there is no universal legal definition of main roads or main road traffic. If an accident results in a legal action, the merits of the case are usually settled on local estimation of the comparative importance of the roads involved. (3.) There is no legally recognised priority, and it appears extremely doubtful that any action in which the defence was based solely upon the assumption that so-called main road traffic had a right of way would be successful.

### HUB GEAR TROUBLE.

A few weeks ago I had a new part fitted to an Armstrong hub gear, and since then I have been unable to declutch on second and bottom gears without a screeching noise proceeding from the hub. On letting in the clutch again it does not engage unless I almost stop the engine. All the parts, etc., appear to be in quite good order, and the trouble, in my opinion, lies in the clutch, for when pushing the machine with clutch out and the exhaust valve lifted, it still drives the engine. The gears act all right when the clutch is in properly, except, perhaps, for a very slight inclination to slip when running in second gear on an incline.—W.M.W.

It would appear that the trouble is due to the fact that the clutch is not completely disengaged. This may be due to faulty adjustment of the withdrawing mechanism or to excessive wear in some of the control parts. Possibly a longer push rod through the hub axle would put matters right.

### MISSING AT LOW SPEEDS.

Misfiring occurs on my 1917 5-6 h.p. Enfield. The magneto (Dixie) has been recently overhauled, the timing is correct, the plugs are both fairly new and in good condition; the trouble only occurs at low speeds on the front cylinder. When the engine is under load no misfiring occurs whatsoever.—L.A.W.

In all probability the misfiring in the front cylinder at small throttle openings is due to a small air leak either at the induction pipe joints or as a result of the inlet valve guide and stem being worn; we assume, of course, that the ignition is in perfect order.

### UNSILENCED STANDARD MACHINES.

I should be much obliged if you could tell me what is really the law regarding open exhausts on motor cycles. I understand they must be "reasonably quiet." Can one be prosecuted for riding a standard sports machine (fitted with long exhaust pipe) if the police consider it *not* reasonably quiet.—B.K.

The law requires that motor cycles shall be reasonably silenced by having the exhaust gases passed through an expansion chamber, or "other device" suitable for the purpose. If the police consider that a standard sports machine is not reasonably silent, it is quite likely that a rider of a machine of this type might be summoned on this account and lose the day. If you are involved in a case of this description, you should write to the makers of your machine, as they may have contested similar summonses previously.

### PITTED PLATINUM POINTS.

Lately my machine (1915 4¼ h.p. L.M.C.) commenced misfiring badly. Thinking that something had got into the jet, I cleaned out the carburetter, but found the engine still misfired as badly as ever. I then suspected magneto trouble, and took off the make and break of the magneto, which I thoroughly cleaned, and polished the platinum points, which were badly pitted. After replacing, the machine ran very well for about twenty miles, but at the end of this distance developed the same trouble. This time I washed out the contact breaker of the magneto with petrol, and cleaned the platinum points by putting petrol soaked rag between them. I found that this banished the trouble *pro tem.*, but at the end of another twenty or thirty miles the misfiring again caused me to examine the magneto, and I found that the platinum points were again badly pitted. (1.) Should the platinum points be pitted after this small mileage, say 100 to 150 miles? (2.) What is the probable cause of misfire?—W.T.McM.

(1.) The platinum points should show no signs of burning even after 2,000 or 3,000 miles running; therefore, 150 miles should not affect them at all. (2.) The trouble is in all probability due to the condenser of the magneto being defective in some way (it may be either internally or externally short-circuited), and your best plan is to return your magneto to the makers for examination and repair.

### RATIOS OF N.S.U. GEAR.

What gear reductions are possible on the N.S.U. or Bradbury engine shaft gears?—A.W.P.

The top gear ratio of the N.S.U. type of gear can be altered to some extent by means of the adjustable variable pulley, which is incorporated in the design. Probably the range of ratios obtained lies between 4⅜ and 5¼ to 1 with a 19in. belt drum and 1in. belt. The actual reduction of the gear is approximately 35%, so that with a top gear of 5 to 1 the low ratio is about 7 or 7¼ to 1.

### INTERMITTENT LOSS OF POWER.

My 4 h.p. Triumph (1919 model) is erratic in running. It starts easily from cold, and runs easily on middle gear, but on getting on to top gear the trouble commences. I have a light sidecar, and sometimes I can get any amount of power and speed out of the engine. After running for about a half-hour it suddenly loses power, and I have to drop into second (I am, of course, speaking about riding on a level road). After a while the engine will pick up, and is as fast and speedy as one expects. The engine has been examined, and it is in perfect condition. The valves are correctly timed and properly adjusted. The timing is correct and I get a good spark. I have fitted a new belt, which is of the correct tension. The carburetter is clean, and is fitted with a No. 26 jet. To all appearances the machine is perfect, so will you advise me as to where the fault lies?—J.W.

The trouble you describe is probably due to partial stoppage in the petrol supply, due to impurities in the petrol or an air leak in the petrol tank, or to a faulty plug which occasionally short-circuits internally, thus causing a similar effect to a retarded spark.

### VALVE LIFT.

Please inform me the correct lift for the valves of the 7-9 h.p. Indian motor cycle (1915 model), as mine lift ⅛in., and I doubt if it is sufficient.—W.H.P.

The valve lift is certainly insufficient. The correct valve lift is ¼in. for both inlet and exhaust valves. Probably the rockers are worn. This can be ascertained by removing the cam cover. It is possible, though not probable, that the cams, too, may need renewal.

### POLICE COURT PROCEDURE.

Some weeks ago I was stopped by a police constable for having the rear number-plate of my motor cycle obscured by the coat of my pillion passenger, and I also failed to produce my driving licence when asked. Three policemen came afterwards to my house to ask various questions and to examine my new licence, and in a week or so I received the summons. I replied stating that I could not appear and that I was guilty of the offences mentioned; I have not heard anything since. One of the policemen, upon hearing this, told me the other day that I had better call at the court to look into the matter, or they may issue a commitment against me. I shall be glad of your advice.—F.P.B.

It is not part of the duty of the police court officials to acquaint a person who is summoned with the result of the case, if he does not appear, as he should attend and then would know what happened. You therefore run the risk of being arrested in default of payment of the fine, and it would be wise to attend at the police court to see what it is, and to pay. Of course, you could write to the Chief Constable or Superintendent of Police, enclosing a stamped addressed envelope, and asking what the amount is.

A HAUNT OF THE GRAYLING—DOVEDALE, DERBYSHIRE. The motor cycle provides the best possible means of reaching inaccessible fishing waters or prospecting hitherto untried districts.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned.*

"J.L." (Dunstable).—Morgan, family model with air-cooled engine: Climbing, stability in grease and tyre wear.

"B.G." (Dublin).—3 h.p. 1921 A.B.C. (solo): General experiences.

"W.H.M." (Belfast).—Any make of folding sidecar.

"W.DeL." (West Green).—Any make of folding sidecar.

"F.E.B." (Newcastle).—3½ h.p. T.T. Norton: Economical jet sizes for Binks carburetter. Philipson pulley or Pneu Auto pulley.

"E.D." (Cambridge).—8 h.p. Enfield sidecar: Gear control in traffic, reliability, oiling system, sidecar comfort, etc.

"C.L." (Maghull).—7 h.p. F.N. with sidecar.

F. C. WALLIS (Ryde, I.O.W.).—3½ h.p. Rudge Multi: Hilly district; pillion passenger.

"A.W." (Cleethorpes).—3¾ h.p. Scott 1921-22: Speed, climbing, and consumption, Amac or other carburetter.

"A.J.C." (Ampthill).—4 h.p. Triumph with 28in. × 3in. cover on 26in. rim. Webb front hub brake. W.S.R. variable jet. Flexekas airtight springs.

"F.Z.E." (St. John's Wood).—4½ h.p. Quadrant: Oiling system, etc.

"R.M." (Maxwelltown).—3½ h.p. Rudge Multi and sidecar: Ease of starting, hill-climbing, belt wear, etc.

"C.H." (Wednesbury).—2¾ h.p. A.J.S. standard sports; also 3 h.p. Raleigh sports.

"G.K." (Norwich).—1¾ h.p. McKenzie.

"H.Q." (Bradford).—2¾ h.p A.J.S. standard sports model.

"G.J.G." (Cambridge). — 2¾ h.p. Douglas: Adjustments for most economical running, etc.

"C.T.F." (London N.13). — 2¾ h.p. Massey-Arran or similar machine fitted with o.h.v. Blackburne engine.

"M.M." (Merton Park).—Tube protectors, steel mail: Resiliency; possible damage to cover, etc.

"G.G.B." (Barnet).—Tynesider pillion seat, Model 64, with adjustable springs and Tan Sad: Side sway, general comfort, etc.

"E.H." (Batavia). — 4 h.p. Harley-Davidson: Speed, comfort, economy, etc.

"B.W.D.L."—W.S.R. variable jet on Amac carburetter for 8-10 h.p. twin engine.

"P.L.E." (Walton-on-Thames).—2¾ h.p. standard A.J.S. and 2¾ h.p. three-speed Raleigh: 300 miles per week all weathers.

"T.W." (Bicester).—W.S.R. variable jet on Triumph carburetter.

"E.D.H.T." (Malpas).—W.S.R. variable jet on 1920 Amac; also 3½ h.p. Rudge Multi solo.

"L.W." (Stockport). — Alldays-Allon: Maximum speed on level; petrol consumption; suitability for light sidecar.

"K.K.H." (Harrow).—W.S.R. variable jet on B. and B. carburetter, P. and M. motor cycle solo: Whether vibration tends to alter the jet.

### Prices Down.

Auto-wheels have been reduced from £35 to £30.

### Single Cylinder Sidecar in Colmore Trial.

Instead of the 6-8 h.p. Rex-Acme sidecar outfit, as in the programme, F. H. Brown rode the new 4 h.p. outfit in the Colmore Cup Trial, and was awarded a gold medal.

### A Change Over.

The well-known competition rider A. C. Robbins, who has, until recently, been associated with Wooler motor cycles, will in future be mounted on an Edmund, for which he is now London representative.

### Changed Hands.

The Birchfield Leather Co., 46, Arcade Chambers, Northampton, has bought the business of the College Leather Co., of the same town. All the latter concern's popular specialities will continue on the market.

### Adding Insult to Injury.

Driving the only air-cooled cycle car in the Colmore Cup Trial, G. W. H. Goodall (8 Morgan) claims that he was baulked on Sudeley Hill owing to the failure of another three-wheeler credited with a clean ascent.

### Makers of the Cygnet Motor Cycles.

In our issue of the 23rd ult. a motor cycle with a sheet steel frame was described, the makers concealing themselves behind the *nom de plume* of "Cygnet." They now ask us to publish the patent numbers, etc., which are: Provisional patent No. 34198, 1921; registered No. 686470. Messrs. F. Allcott and L. Jones, 14, Daniels Road, Bordesley Green, Birmingham, are the designers.

### Enterprise.

With the idea of falling into line with other places of business during the "brighter London" week, Maudes Motor Mart dressed their window so as to represent a jolly motor cycle picnic party. The two machines employed to help out the scheme were a Matchless double-seated sidecar outfit and an Ivy motor bicycle. The window succeeded in attracting quite a number of visitors.

### Goggles.

*Apropos* of letters appearing recently under the heading "Wanted: Perfect Goggles," we are informed that in all probability the Triplex Aviation Mask goggle would suit our correspondents' requirements. These goggles are no longer manufactured, but a stock of Government surplus is held by the Service Co., Ltd., 289, High Holborn, London, W.C.1, who have a limited supply to offer at 11s. 9d. The original price was 42s. 6d.

### Illumination of Speedometers.

It is often inconvenient to employ an external agent for the purpose of illuminating the speedometer dial, and it is interesting to know of a firm undertaking to render the hand, numbers, and points of the speedometer dial luminous so that they can be easily read at night, whether in twilight, moonlight, or in pitch darkness. Most makes of speedometers can be rendered luminous with the best quality paint at a cost of 10s.; this work is carried out by Stanley's Motor Cycle Co., Ltd., 173, Railway Approach, Shepherd's Bush, London, W.12.

### A New Motor Spirit.

A new brand of petrol, to be known as White Cross motor spirit, will shortly make its appearance upon the British market. It will be sold in gilded cans marked by white crosses, and a million and a quarter gallons will be delivered per month. So far as quality is concerned, it will be of from 0.725 to 0.730 specific gravity, and will compare favourably with the best known brands of motor spirit. At the present time the price to the public will be the same as for other brands of petrol. It is being handled by Mr. Howard F. Eldridge, 7, Lower Seymour Street, London, W.1.

### Catalogues Received.

Cedos Motors, Northampton: A folder describing all models of the popular Cedos lightweight two-stroke.

Dunhills, Ltd., 359-361, Euston Road, London, N.W.1.: Dunhills illustrated catalogue of motor cycle accessories.

The Toronda Manufacturing Co., Ship Yard, Weybridge: A well got up catalogue of two patterns of Toronda sidecars.

Cheltenham Works, Ltd., 86-88, Acre Lane, Brixton, London, S.W.2: A catalogue of Relmac lathes and accessories.

The Tyrus Cycle and Motor Co., Johnstone Street, Birchfields, Birmingham: A series of leaflets dealing with the firm's motor cycles.

Jeff Patent Tube, Ltd., Pembroke Road, Walthamstow, London, E.17: Folder describing and illustrating the Jeff patent puncture-proof tube.

P. L. Cearns, 8, Plaistow Park Road, Plaistow, London, E.13: Folder describing the Cearns patent aluminium non-chafe case for inner tubes.

The Coventry Victor Motor Co., Ltd., Coventry: A catalogue giving details and prices of the three Coventry Victor flat-twin engined motor cycles.

The Cleveland Motor Cycle Manufacturing Co., 90, Cannon Street, London, E.C.4.: A useful book containing a full list of parts for Cleveland machines. Parts are illustrated and numbered, so can be easily identified in the list.

Burney and Blackburne, Ltd., Atlas Works Bookham, Surrey: A folder giving a list of manufacturers of motor cycles using Blackburne engines, and a well-illustrated booklet containing a full description of the Blackburne engine.

Goodyear Tyre and Rubber Co. (Great Britain), Ltd., 162, Shaftesbury Avenue, London, W.C.2: Leaflet giving new retail prices of Goodyear tyres; two sizes (27in. × 3½in. and 29in. × 3½in.) are given as oversizes for 26in. × 3in. and 28in. × 3in. respectively.

# CURRENT CHAT

## Times to Light Lamps.

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Cheaper Petrol?

A new fuel company has been formed as a rival to the petrol combine. It is to be wondered if petrol will be cheaper in consequence—"a consummation devoutly to be wished!"

### More Firemen Motor Cyclists.

The Cape Town Fire Brigade is one of the latest to include a motor cycle among its fleet. This is a Harley-Davidson sidecar outfit with a box body, emergency fire tackle, and the usual brass bell.

### Hill Climb for Second-hand Machines.

Next Saturday second-hand machines entered for the Used Motor Vehicles Show at Crystal Palace from March 27th to April 8th will be tested under A.C.U. supervision on Fountain and College Hills, which adjoin the exhibition hall. Intending sellers who find it impossible to turn up then may do so on the following Saturday.

### An Australian Six Days.

Wet weather was experienced during the greater part of the Australian Six Days' trial organised by the Motor Cycle Club of New South Wales. In one place three miles from Bathurst, a channel was washed clean across the road. The first three in the solo class were H. Hulford (3½ Douglas), Cootamundra Club, absolute winner, 600 points; 2, F. Roberts (4 Indian), 598 points; 3, E. White (7 Harley-Davidson), 506 points. In the sidecar class P. Williams (7 Excelsior sc.), J. Miles (7 Harley-Davidson sc.), and A. J. Dennis (7 Indian sc.) tied for the first place with 600 points.

### Delay at the L.C.C. Licensing Dept.

With the removal of the L.C.C. licensing office from the makeshift premises in Charing Cross Road to the new palatial County Hall across the river, we naturally expected a little speeding up in the matter of serving out licences. It was hoped that one would obtain them with the same ease as getting a gallon of petrol. Apparently, however, it is not to be. These hopes have been severely shattered, for on Monday last, to obtain a new licence, a reader wasted an hour and three-quarters. In the room devoted to registration there are nine inquiry windows. Of these, despite the fact that there was a queue of at least forty people, only two were in use. Surely, now that the authorities have a building costing the ratepayers about £2,000,000, London motor cyclists and motorists are entitled to an improved service.

When daffodils begin to peer,
With heigh! the doxy over the dale,
Why, then comes in the sweet o' the year;
For the red blood reigns in the winter's pale
The Winter's Tale
Sydney R. Jones

### Friction-Driven Dynamos.

There have been several dynamos in the past which have been driven by a friction wheel working from one of the motor cycle tyres, but these have not been particularly satisfactory. However, the simplicity of the drive is justifying its retention, and some improved forms are being placed on the market. The modern tendency is to attach a friction plate to the rim or spokes of the wheel. One well-known Continental firm of magneto manufacturers has lately brought out a lighting set in which this system of drive has been incorporated.

## Special Features.

MODERN PRACTICE IN ENGINE DESIGN.

TOURING IN NOVA SCOTIA.

ROAD RACING IN IRELAND.

### French National Fuel.

The French national fuel, the ingredients of which have hitherto been kept secret, consists of high-grade petrol, alcohol, cyclo-hexanol, and phenol. Naturally, petrol forms the greater part of the mixture.

### The Grand Prix de France.

There are several races in France called "The Grand Prix," but what we know in England as *the* Grand Prix is the race bearing the title in the caption of this paragraph. This will take place on July 12th, and not on the 2nd, as previously announced by the organisers.

### First Brooklands Meeting.

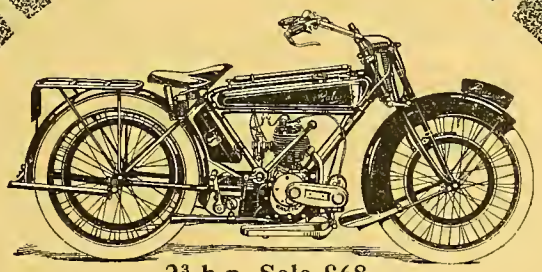
Details are to hand for the first meeting of the B.M.C.R.C. at Brooklands on Saturday, April 8th. Racing will begin at 2 p.m., and there will be five three-lap handicap races for motor bicycles up to 350 c.c., 500 c.c., and from 500 c.c. to 1,000 c.c.; also for passenger machines up to 600 c.c. and up to 1,100 c.c. There will also be three three-lap scratch races for machines up to 350 c.c. 500 c.c., and 1,000 c.c. The final event of the afternoon will be the all-comers' handicap for private owner members, who will be asked to produce their registration books at the starting line as a proof of their *bona fides*. The B.A.R.C. season opens on Easter Monday (April 17th).

### Tourist Trophy Entries.

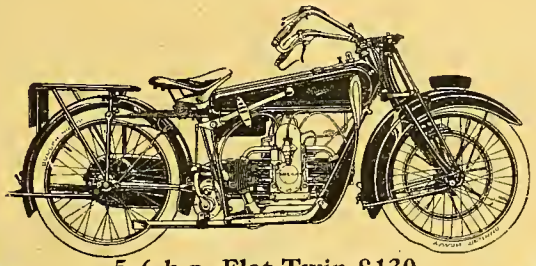
Entries are already beginning to flow in for the Tourist Trophy races. For the Senior event V. Anstice has entered a 3½ h.p. Douglas; W. Hollowell and R. M. Knowles have each entered a 3½ h.p. Norton, while Norton Motors, Ltd., will be directly represented by five similar machines. The winners of last year's race, A. J. Stevens and Co., Ltd., in addition to their Junior entry, have entered two machines for the Senior event, and Mr. W. H. Wells three 3½ h.p. Indians.

For the Junior race D. Hall will ride a 2¾ h.p. New Scale, while the A.J.S. firm will defend the Junior Trophy with six machines. In the Lightweight Race (250 c.c.) F. W. Applebee will again be riding a 2¼ h.p. Levis, C. Edwards a 2¼ h.p. New Imperial and C. W. Johnstone a 2¼ h.p. New Imperial.

Dr. Hopwood, who rode a Levis in last year's event, has again entered for the race on a similar machine. One rider, J. Joynson, has sent in an entry, but no machine is specified.



2¾ h.p. Solo £68.



5-6 h.p. Flat Twin £130.

# Do you realize why

such a mighty success has been achieved by the

# RALEIGH

## THE MOTOR-CYCLE

with Dunlop tyres and Sturmey-Archer Countershaft Gear ? There must be some reason for it. Here's one. The material for every part has been carefully selected and subjected to the most strenuous tests. For instance, the exhaust valve is made of very expensive tungsten steel and the inlet of heat-treated nickel steel—thus giving valves practically unbreakable. This is but one illustration, but notwithstanding that no question of expense has been considered, the Raleighs are sold at

**2¾ h.p. £68. 5-6 h.p. £130.**

*Send for the Raleigh catalogue. It will give you more details.*

THE RALEIGH CYCLE CO., LTD., NOTTINGHAM.

*The G.N. has won the majority of Small Car Events, including the 200 miles Race.*

## LESS SPECTACULAR, BUT JUST AS WONDERFUL.

IN THE DAILY ROUND, throughout the years, countless G.N. owners continue to be happy motorists.

FREE FROM the usual worries, they use their cars as a matter of course—like healthy men, they forget their 'insides'

THERE ARE thousands of these users, disabled men, ladies, business men, and just plain, ordinary motorists, finding happiness and fresh air in the country-side.

LOTS HAVE given up their bigger cars, others have been 'promoted' from motor cyclists.

MANY *never had anything* before.

JOIN THEM, and enjoy happy, comfortable, and *economical* motoring.

A WELL ILLUSTRATED catalogue will tell you many interesting things about the G.N. It is ready to send, may we have your address?

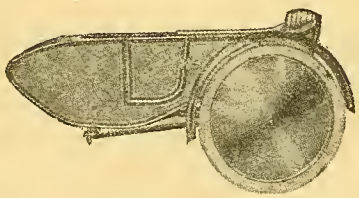
# HENDERSON SIDECARS

**For Quality and Comfort they cannot be surpassed.**

MODEL "A" (shown with disc wheel).

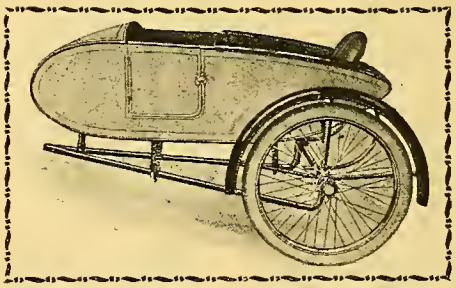


PRICE £19:10

Models to suit every taste and purpose.
Prices ranging from £19 10 to £40.
Delivery of all models can be given from stock.

*Illustrated Art Catalogue on request from:—*

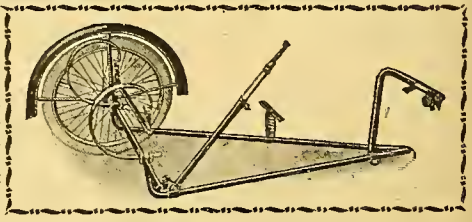
**HENDERSON SIDECARS**
**AERO WORKS, FITZWILLIAM ST., SHEFFIELD.**
'Phone: Cent. 3119. 'Grams: "Aero."



THIS is the Dunhill Featherweight, selling, less tyre, at only £16 : 16 : 0 The Chassis alone is illustrated below. It is an adaptation of the Dunhill patent Triangular-frame design which gives the safest Chassis on the road,—a chassis in which maximum strength and rigidity are combined with minimum weight. Frame distortion is totally impossible. We are the patentees of this design, correct in theory and proved in practice, and will gladly send you full details on request. If you are a present or prospective sidecar user, write us to-day.

**Dunhills Limited**
**359-361, EUSTON ROAD, LONDON, N.W.1**
**GLASGOW DEPOT: 72, ST. VINCENT STREET**

Send to-day for a catalogue illustrating and describing Dunhill Patent Chassis & Sidecars. Simply tear out and post this advertisement with your name and address written in the margin. Send to-day and make sure.



### Early Entries for Scottish Six Days.

Fifty-four entries have already been received for the Scottish Six Days' Trials, which start on May 1st, and it is confidently expected that last year's list of 130 competitors will be considerably exceeded before the closing date (April 15th). Mr. Campbell McGregor's (the secretary) address is 6, Castle Terrace, Edinburgh. The route has not yet been announced.

### Open Trial in Devon.

Signs are not lacking that the open trial to be held by the S.W. Centre A.C.U. on May 29th will be a most interesting event. Beggar's Roost and several new hills in the same neighbourhood will be included in a sporting course starting at Exeter, the lunch stop being at Barnstaple. Fuller particulars may be obtained from Mr. Herbert Pike, Taunton.

### In this Issue.

Large-scale illustrations of well-known engines in section appear on pages 324-327.

A tour in a little known province of Canada is described by an American contributor (pages 328-329).

On page 352 will be found a guide for those who are contemplating purchasing a second-hand motor cycle.

Several successful road races held in Ireland are described on pages 330 to 332.

### The Engineering Lock-out.

Owing to the unfortunate labour dispute, work in certain engineering factories is likely to be held up. Readers requiring their machines overhauled before Easter should write the manufacturers beforehand to ascertain whether the repairs can be undertaken. All motor cycle firms are not affected, however; neither are all engine and gear manufacturers. For example, the "lock-out" is not interfering with the J.A P. factory.

### One Day Trial in Worcester and Somerset.

Arrangements for the Western Centre (A.C.U.) one-day trial are in the hands of Mr. J. B. Freston, 32, Strode Road, Clevedon, Somerset, who is joint acting trials secretary for the event. Entry forms should be obtained from him and returned by Saturday, the 25th inst. The trial starts from Clent, near Stourbridge, and touches Cheltenham, Bristol, Bath, Stroud, Gloucester, Malvern, and Worcester. The course of 220 miles is to be stiff but fair. Observers are required.

### A Pioneer Passes.

It is with deep regret that we have to record the death of Mr. Charles Binks, who passed away on Tuesday, March 7th, at his home at Eccles. Mr. Binks, who is familiar to most motor cyclists, is best known in connection with his three-jet carburetter, but his activities in the engineering trade were wide, and old-time riders will remember a four-cylinder air-cooled motor cycle bearing his name.

At the time of his death Mr. Binks was 58, and carried his years lightly. He was a keen fisherman, and was apparently in good health until the Saturday preceding his death.

### A Famous Continental Rider.

Readers of *The Motor Cycle* often see the name of L. Psalty, a well-known competitor in Continental trials. Psalty is a Greek, now resident in France, who is agent for a number of well-known English motor cycles. In 1912 *The Motor Cycle* described a long Continental tour that he made on his Triumph of that year, which is acknowledged and quoted in a current issue of our contemporary *La Revue Motocycliste*.

### A New Sporting Model.

We are in a position to state that a new sporting twin will be ready for the market in the near future. Messrs. Bradbury, of Oldham, have decided to list an entirely new model, details of which are not yet available for the public. We may state, however, from a personal inspection of the detail work that the latest light twin Bradbury will be a machine in every way suited to those who require a handy twin with a high performance.

### Highland Rights of Way in Danger.

All lovers of the Scottish Highlands, especially those who ramble over the passes, will learn with something akin to consternation that an electricity company in the Grampians is seeking to obtain powers to close certain rights of way. In the plans proposed footpaths beside Lochs Ericht, Garry, and An Duin will be submerged, while roads will be closed in Glen Tilt, Glen Tromie, and the Minnikaig Pass. Mr. Percy Donald, B.Sc., A.M.I.C.E., 36, Leamington Terrace, Edinburgh, points out that similar powers granted in other parts would quickly close the Highlands entirely, and urges that deviation of rights of way only should be permitted.

### Observers Wanted on Saturday.

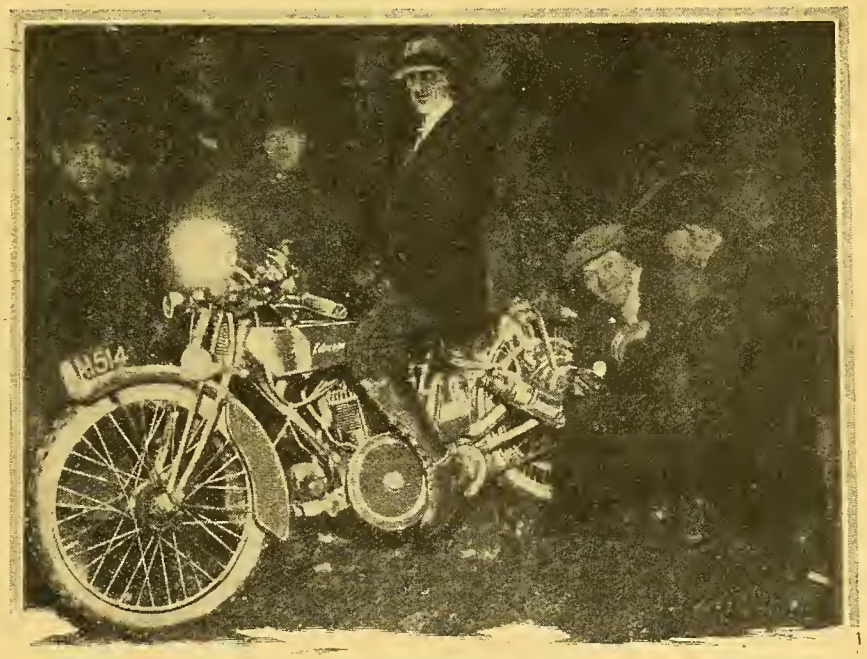
Additional observers are wanted for next Saturday's Victory Cup Trial; those willing to act in this capacity should communicate with Mr. Lawson Clarke, 43, Leyton Road, Handsworth, Birmingham.

### Trial in the Peak District.

A one-day open trial, covering about 140 miles, including the Peak District and traversing Leicester, Loughborough, Derby, and Nottingham, will be held by the East Midland Centre (A.C.U.) on Saturday, March 25th. The premier award is the £100 (pre-war) Raleigh Challenge Cup for the best individual performance. Posters will be exhibited along the route showing times of the competitors passing. Entries close on Saturday, and must be sent to Mr. H. J. Woodgate, 62, High Street, Leicester.

### Tynesiders' Premier Motoring Event.

The Travers Open Trial, which has been allocated this year to the Newcastle and District Motor Club by the newly-formed North-Eastern Centre (A.C.U.), will take place on April 22nd, and arrangements are now well in hand. The route will include part of last year's Travers course, but it is going to be a much more difficult proposition. Several new "discoveries" in the way of hills have been introduced. The principal award for the trial is the Travers Challenge Trophy valued at 200 guineas and a special prize of £50 presented by Messrs. Travers, Ltd., Newcastle. The club desires observers for the day of the trial, and anyone willing to serve in this capacity should apply to Mr. H. Gillies Wicks, c/o Coopers, Ltd., Westgate Road, Newcastle.

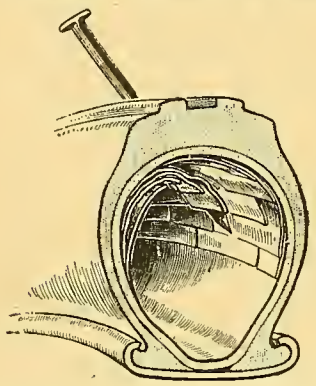


CLIMBING ALTY-BADY IN THE DARK. J. Westwood Wills, who last week ascended the notorious Welsh hill, Alty-Bady, under A.C.U. observation, twelve times on a 2¾ h.p. Edmund-Blackburne. This flashlight photograph was taken immediately after Wills' successful climbs.

# PUNCTURE PROOFING.

## Two New Tubes which are Claimed to Give Immunity from Tyre Trouble.

PNEUMATIC tyres made motor cycling possible. Unfortunately, they also made punctures possible, and, although the larger and better tyres of to-day are not so susceptible to these annoying occurrences as were the diminutive covers of yesterday, the bogey is always with us. But perhaps it will not be ever thus; for several very promising "unpuncturable" tyres (or tubes) are making an appearance. We illustrate two new inventions.



When a nail penetrates the Jeff tube it simply pushes aside the flaps which on withdrawal of the puncturing agent automatically seal up the hole.

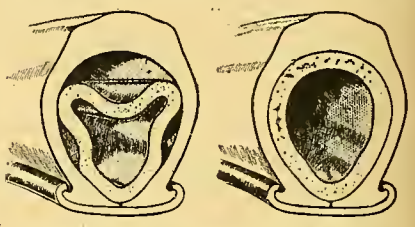
The Jeff patent tube has passed the experimental stage, and is now available to the public in the following motor cycle sizes: 26in.×2¼in., 26in.×2¾in., 26in.×3in., and 28in.×3in.—a hopeful sign for the doubters. It is quite different from anything of the kind attempted before, and consists of what externally looks like an ordinary air chamber, but inside is a series of rubber flaps overlapping one another, with the result that any foreign object which penetrates the outer cover and tube merely pushes the flaps to one side, and when this object is withdrawn the hole is immediately sealed by the flap beneath it being forced upwards by the pressure of air.

### Standing a Test.

Mr. H. F. S. Morgan, the well-known exponent of the three-wheeler which bears his name, has recently put this tube to a very severe trial, when, after driving seven nails through the cover, he found the tyre quite hard. He then penetrated the cover with several ordinary nails, a bradawl, a strong needle, a sharp scriber, and one or two blunt file ends, and the tube still retained air. The manufacturers are Jeff Patent Tube, Ltd., Pembroke Road, Walthamstow, London.

On quite another principle the Compression puncture-proof tube is of considerably greater thickness than one of standard pattern and the circumference of the outer cover which it fits. In its deflated form it is moulded with deep corrugations on the sides, but when inflated the corrugations straighten out, thus conforming to the internal contour of the cover. When inflated, instead of stretching the tube, the air pressure compresses the rubber, so that, if punctured, the holes made by nails or other puncturing agents are closed automatically.

It is claimed that it is more resilient than the ordinary tube, and requires 25% less air pressure. At the present moment it is only made in the 28in.×3in. size, but other sizes are in course of preparation, and will be ready in a few weeks' time. Bramco (1920), Ltd., St. Nicholas Street, Coventry, the concessionnaires, state that if the tubes are fitted to their Tulsa cord tyres they will be guaranteed against punctures and all defects of manufacture for 10,000 miles.



Deflated the Compression tube takes the shape shown on the left; inflated, it is forced to conform to the outer cover, the rubber being in compression.

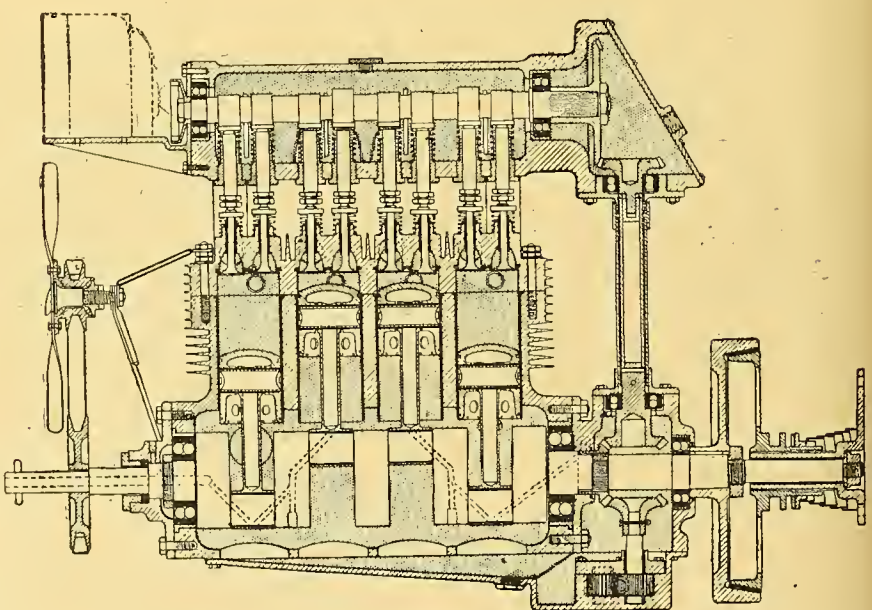
# O.H.V. FOUR CYLINDER ENGINE.

## Aluminium Monobloc Construction. Forced Lubrication. Overhead Camshaft.

ORIGINALLY designed for light car work, but suitable also for motor cycles, the four-cylinder engine which we are about to describe has been designed by Mr. A. Elverson, the originator of the Oscilloscope. Having a bore and stroke of 70 mm. (=1,077 c.c.), the cylinders are cast with the single aluminium crank case body. Steel cylinder liners are pressed in from the top, and a casting of aluminium, forming the four cylinder heads, definitely retains these liners.

Cast iron valve seats are cast into the head, and the valves, which are in line, are operated by an overhead camshaft through adjustable plunger tappets. The camshaft is driven by a vertical shaft and bevel gear from the rear end of the crankshaft, and the magneto, mounted high up, is driven from the front of the camshaft.

With the exception of the big ends, which are lubricated under pressure from a gear pump at the rear of the crank case, and the small end bearings, all bearings throughout the engine are of the Skefko double row type.



Section of the o.h.v. air-cooled Elverson four cylinder engine.

Two heavy races support the massive crankshaft, and these races are of such a diameter that the whole crankshaft can be passed into the crank case through the bearing housings.

**O.H.V. Four Cylinder Engine.—**
Aluminium pistons with very large hollow gudgeon pins and two rings in a single groove, are attached to the crankshaft by tubular connecting rods with white metal big ends. Below the crank case proper is an oil sump and pump body, which can be detached to provide access to the big ends, and this sump slopes rearwards so that the gear type oil pump is constantly flooded.

Longitudinal ribs are provided to cool the cylinder block, but the head ribs lie transversely.

The camshaft case is mounted on legs cast on the cylinder head block, and the engine is reasonably accessible. In view of the interest which is being exhibited in air-cooled four-cylinder engines at the present moment, this design is worthy of careful study.

# FOUR-SPEED CHAIN GEAR BOX.

## Great Simplicity, Minimum of Working Parts and Adaptability of the Caton Gear.

USING chains instead of pinions, the Caton gear box provides four speeds in a design as simple as the average three-speed gear. Naturally, in order to achieve this minimum of parts, all the gears are indirect, but with chains running under ideal conditions, *i.e.*, in oil and over favourably sized sprockets at close centres, the loss in transmission efficiency may be regarded as negligible.

In the gear box are two double and two single sprockets, the latter arranged at opposite corners, and all normally revolving loosely on the two shafts, one of which carries the clutch and the other the rear chain sprocket. A dog clutch on the exposed portion of each shaft is so arranged that either the single or the double wheel may be dogged to the shaft.

The various combinations of position—four in number—which these dogs may take up give the required different ratios. On three gears the drive is simply taken by one of the three chains from one shaft to another, the other two running idle. For the remaining ratio the drive crosses and recrosses the box *via all three chains*.

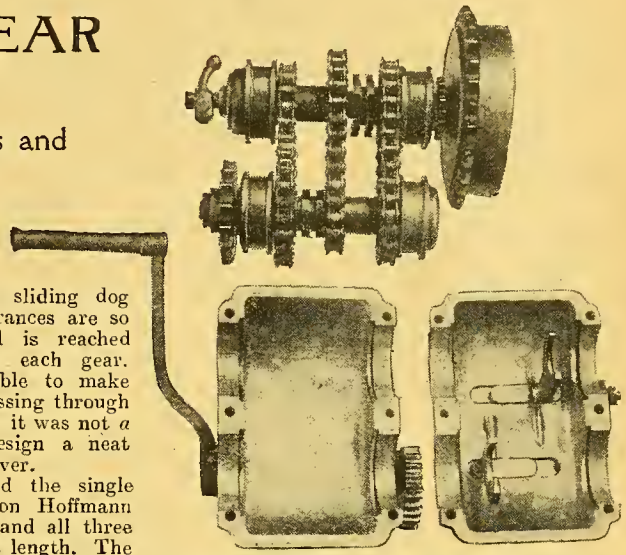
Two forks, operated by a simple arrangement on the top of the box, control the movement of the sliding dog clutches, and the clearances are so arranged that neutral is reached automatically between each gear. Since also it is possible to make any change without passing through the intermediate ratios, it was not *a* difficult matter to design a neat gate for the control lever.

Both the shafts and the single wheels are mounted on Hoffmann journal ball bearings, and all three chains are of the same length. The final drive may be changed from left to right or *vice versa* without structural alteration to the box.

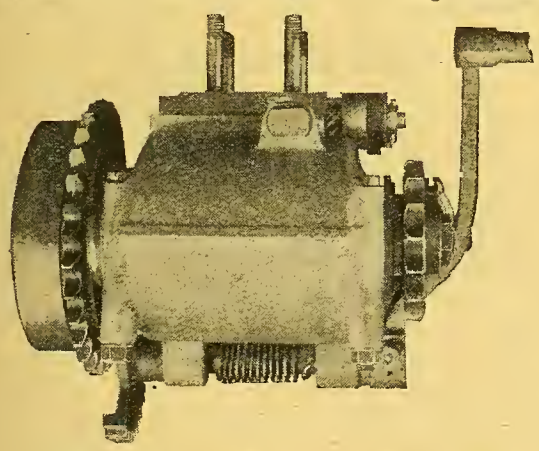
The kick-starter shaft passes under the box and acts directly on to the clutch, which itself is of conventional design.

On the whole the design is very simple, both to manufacture, and, in particular, to assemble, and once the knack of gear change has been learned must be almost foolproof. The actual ratios of the four speeds are respectively : 0.68, 1.0, 1.46, and 2.14 to 1.

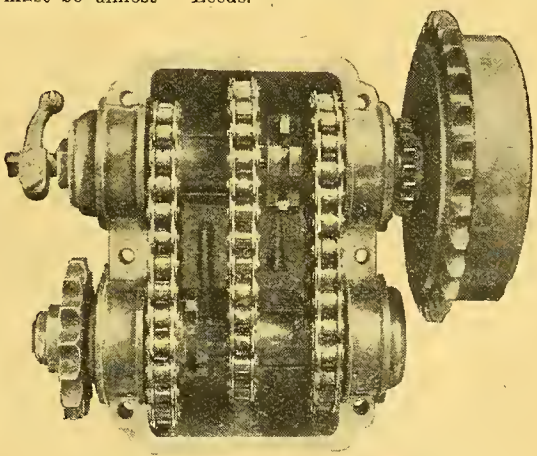
It is claimed that the box may be fitted to any machine. The designer is Mr. Chas. Caton, 6, St. Ives Mount, Armley, Leeds.



Main component parts of the gear. The actuating forks are inside the top half of box (right).



The Caton four-speed gear box. In the final model the kick-starter mechanism will be enclosed.



View of the box from below with the lower half of the casing removed.

## CONTROL OF THE SPORT IN IRELAND.

OWING to the war and the recent troubles in Ireland, there was no conference between the Ulster and Southern Centres of the Motor Cycle Union since 1915 until Saturday last, when delegates met to discuss affairs of mutual interest.

One of the most important matters to engage the attention of the conference was the question of road racing, mainly arising out of the number of road races held in Ulster last year. After considerable discussion, it was agreed that in future no permit should be issued by the Union for a speed competition on the road (other than a hill climb) unless the promoting body procure permission from the properly constituted authority.

The Southern Centre was asked to obtain from the Royal Irish Automobile Club permission for clubs holding motorcycle trials to include in such events four-wheeled vehicles with engines not exceeding 1,100 c.c.

# THE PARIS-NICE TRIAL.

## Success of British Motor Cycles. French Miniatures Complete the Course. 25 m.p.h. Schedule.

THIS year's Paris-Nice Trial attracted forty-five two-wheelers and fourteen cycle cars. On arrival at Nice the motor cycles had been reduced to twenty-five and the cycle cars were only eight in number. The trial was rendered difficult by reason of the high average of twenty-five miles an hour which had to be maintained, any rider failing to maintain this being automatically eliminated To differentiate further between the competitors, points were given for early arrival, but these were only of minor importance.

The first stage of 197 miles from Paris to Dijon proved trying for machines and riders. To avoid delay the start was given well outside the city of Paris, but the road surface proved to be very bad for the first hundred miles, and heavy rain, hail, and a gale of wind made the going exceedingly hard.

From Dijon into Lyons, a distance of 184 miles, was another hard stage, with several miles of *pavé* into the Silk City which made it impossible for a rider who had lost time to regain anything at the end.

### Better Weather Conditions.

Down the Rhone Valley, from Lyons to Avignon, a distance of 139 miles, was marked by brilliant sunshine, which came as a welcome compensation after the rain and cold of the first two days. Part of this road was excellent, and some was terrible. The easiest stage was the 164 miles from Avignon into Nice. With weather such as can only be found in the South of France in the month of March, and with excellent roads, the run was made to the mid-day stop at Brignoles without incident, and the afternoon journey over the Esterel was delightful. The climb through gorgeous scenery called for a lot of attention, while the run down the opposite side to Cannes had to be undertaken with caution by reason of the innumerable turns, but the surface being perfect, it was much preferred to the rough roads of the North.

### 25 m.p.h. Average.

Under the rules, the same average of twenty-five miles an hour had to be maintained by the motor-assisted bicycles and the scooters as by the 1,000 c.c. solo machines. The error of this was revealed by the great difficulty the small machines experienced in keeping to schedule. On two occasions it was decided to extend the time by one hour in order to make it possible for these little machines. to remain in the trial.

Even with this concession, only two motor-assisted bicycles—a Griffon, ridden by Baudelaire, and an Evans, handled by Trouche, finished within the time limits. Durand's Monet-Goyon scooter finished without penalisation, but a second machine of this make had to drop out.

The following were successful:

250 c.c. SOLO.

1. Alger (Terrot).
2. Clech (Motosolo).
3. Vachey (Terrot).
4. Dagorno (Moto-Bijou).
5. Berte (Moto-Bijou).

500 c.c. SOLO.

1. Naas (A.B.C.).
2. Borgotti (A.B.C.)
3. Chappaz (Sunbeam).
4. Zind (Motosacoche).
5. Pinney (Triumph).
6. Cuzeau (Terrot).

750 c.c. SOLO.

1. Rolly (A.B.C.).
2. De Neuville (Triumph).
3. Vattier (B.S.A.).
4. Vincotte (B.S.A.).

Two Motosacoche machines, ridden by Robert and Lapallud, finished with clean scores in the 1,000 c.c. solo class, and Guiguet on an Orial was the only one out of three 600 c.c. sidecars of the same make to reach the finishing point.

1,000 c.c. SIDECAR.

1. Verdy (Harley-Davidson)
2. Gex (Motosacoche).
3. Porci (Harley-Davidson).
4. Wood (B.S.A.)

### Few British Riders.

This year comparatively few English riders took part in the trials, although English machines with French riders were fairly well represented. In the mountains between Bourg and Lyons, Wood overturned with his B.S.A. sidecar, but the machine suffered no damage of importance, and came into Nice without the loss of points.

Immediately after arrival all the motor cycles were placed in a special exhibition hall, and there remained on view for four days.

(Left.) The Terrot team of French lightweights, two of which completed the journey within the time limits. (Right.) A motor scooter rider, Durand (Monet-Goyon), who finished without penalisation is shown in the centre of the right-hand group.

## SATURDAY'S BIG TRIAL.

NEXT Saturday's big Midland event, the Victory Cup Trial, has attracted 218 entries.

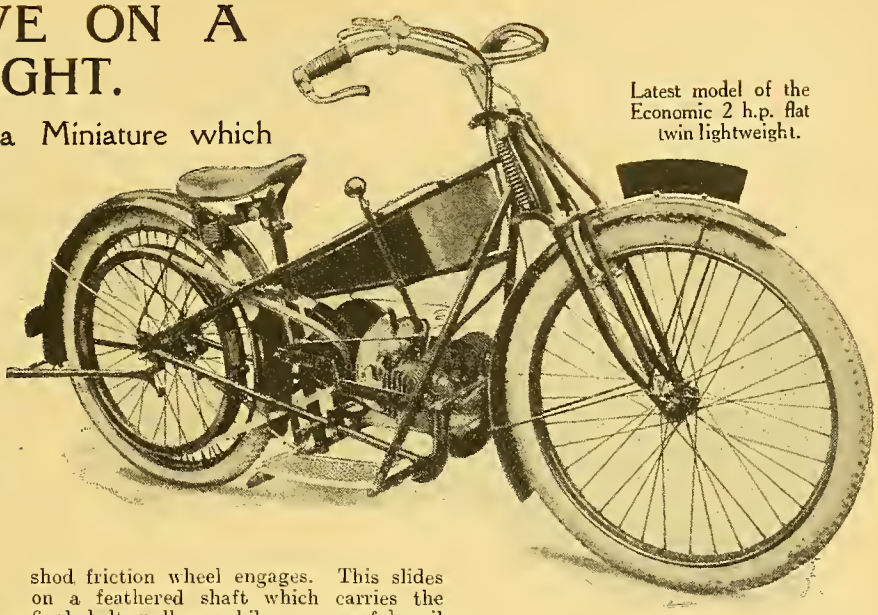
Starting at the works of the James Cycle Co., at Greet, Birmingham (first two men away at 8.1 a.m.), the route covers much new ground, but never gets far away from the starting point. For the benefit of those who desire to watch the performance of the competitors, the approximate times of the vanguard at various points of interest are appended:

Swan's Hill, 8.19 a.m.
Gravel Pit Hill, 8.24 a.m.
Bromsgrove.
(Acceleration test; venue not decided.)
Hagley Wood Hill, 9.15 a.m.
Cleut.
Holycross
Harplebury.
Stourport.
Noah's Ark Hill, 10 a.m.
Buckridge.
Clow's Top, 11 a.m.
Bickbrook.
Flagstaff Hill, 11.45 a.m.
LUNCH: The Hundred House, 12.1 p.m. (one and a half hours).
Tedstone Delamare.
Knightwich.
Alfrick.
Sandy Lane, 2.5 p.m.
Suckley Hills.
Mill Lane Hill, 2.45 p.m.
Cradley
West Malvern.
Crost's Hill.
Malvern Link
Droitwich.
Bromsgrove
Rubery
Beacon Hill, 3.50 p.m.
FINISH: Austin Works, 4 p.m.

Thus the last man should finish well before lighting-up time.

# FRICTION DRIVE ON A LIGHTWEIGHT.

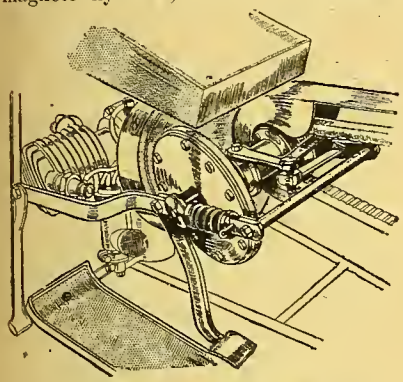
## Redesigned Transmission on a Miniature which made its Debut at Olympia.



Latest model of the Economic 2 h.p. flat twin lightweight.

IN the recently introduced 2 h.p. lightweight Economic motor cycle there is a good deal to attract those who want a small, handy machine. Since the Show in November this miniature has undergone several changes. The flat twin two-stroke engine (52.5 × 38.5 mm. = 165 c.c.) is now placed across the frame, the cylinder heads are bolted to the sub-frame, which carries engine and countershaft, and a further stay is connected from the crank case to the front transverse member of the frame.

A friction disc has been bolted to the magneto flywheel, with which a Fibrax-shod friction wheel engages. This slides on a feathered shaft which carries the final belt pulley, while a powerful coil spring serves to keep the friction wheel in close contact with the friction disc, disengagement being effected by means of a heel pedal. There is no reason why the "clutch" operation should not be from the handle-bar by means of a Bowden lever, which can be left permanently in engagement if it is desired to wheel the machine about with the engine at rest.



Details of the variable gear friction drive.

The action of this clutch pedal is to move the friction wheel about $\frac{1}{16}$in. away from the disc, and, of course, as soon as this is done the power is disconnected from the road wheels, and the friction wheel is also free to slide across the face of the friction disc, thus varying the gear ratios, which range between 6 and 19 to 1.

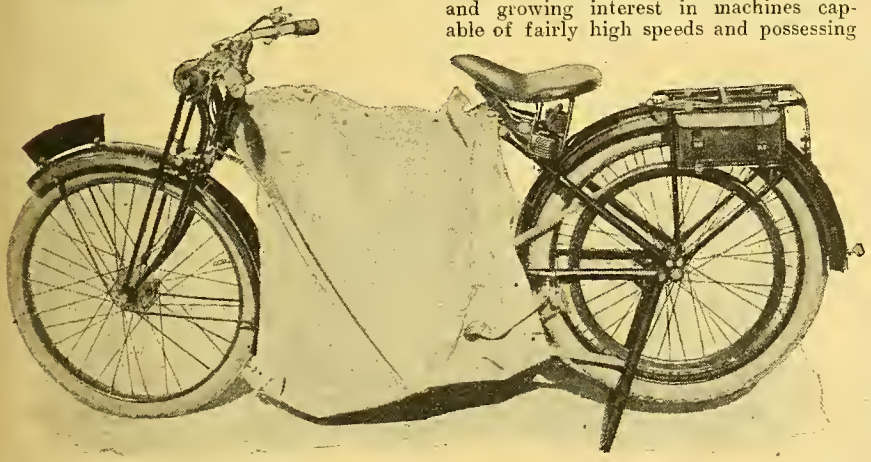
The final model will be fitted with Druid forks, a front wheel rim brake, and a belt rim brake on the rear wheel. The rider's comfort has been well studied, and 26 × 2¼in. Avon tyres are fitted.

Sold at £34, and weighing 110lb., the little five-speed Economic should be a very attractive proposition. Economic Motors, Ltd., 62, East Castle Street, London, W.1, are the manufacturers.

# THE BRUSSELS SHOW.

## Belgian, French and British Machines Staged in One Exhibition. Motor-Assisted Bicycles a Feature

MOTOR cycle manufacture in Belgium is confined to a limited number of makers, and the nature of the roads does not tend to the almost universal use of motor cycles which is apparent in this country. Nevertheless, there is a steady and growing interest in machines capable of fairly high speeds and possessing good road-holding and vibration absorbing qualities.

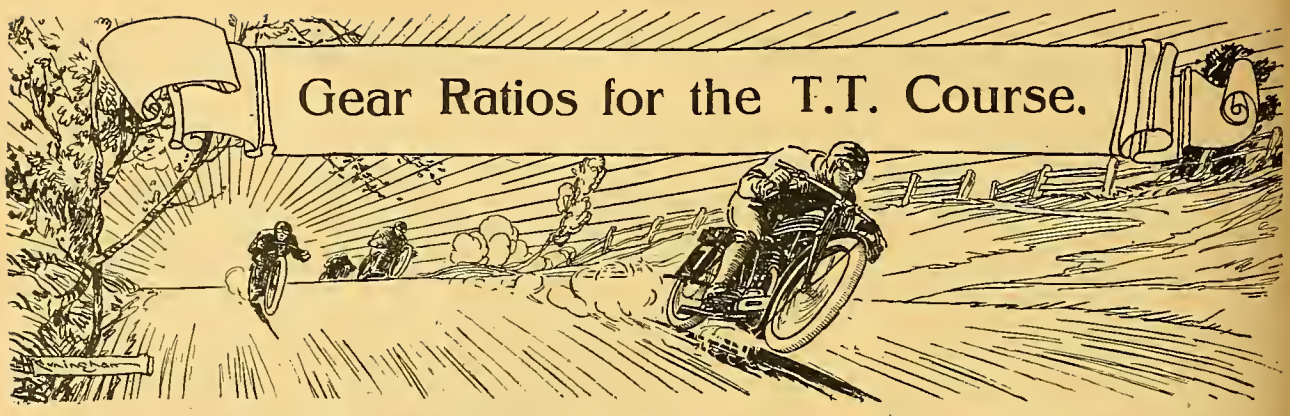


JUST AS YOU CAN BUY! A stock 2¾ h.p. O.K. Junior, which competed in yesterday's A.C.U. trial, sealed in an ex-army ground sheet. The cover envelopes the whole of the mechanism and practically every eyelet is sealed; no vital part of the machine can be touched and yet it can be conveniently wheeled from place to place.

A representative display of machines was recently staged in Brussels in a former ducal palace, and it included the principal manufactures of Belgium and France, together with a number of the leading British machines; unfortunately the construction of the building caused many exhibits to be scattered in small rooms and corridors.

### Motor-Assisted Bicycles.

Generally speaking the number of motor-assisted bicycles was the most noticeable feature of the show, the power in most cases being provided by a miniature engine of 1 or 1½ h.p. Among the bigger machines it is obvious that 6 or 8 h.p. models are preferable in Belgian eyes, and 28in. × 3in. or 27in. × 3½in. tyres and heavy frames are in demand. The Jeecy-Vea, a machine produced in Brussels, is outstanding for its finish, but the British machines which were shown were mostly at the forefront in this respect. Cycle cars, chiefly of French make, are well represented, and there appears to be considerable development in this class of vehicle.



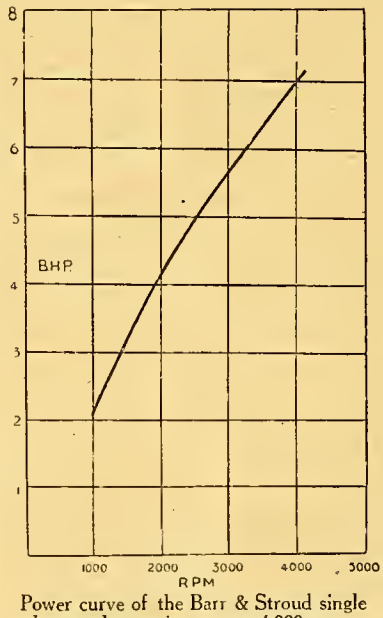
# Gear Ratios for the T.T. Course.

## Some Notes on the Importance of a Careful Selection of Ratios to Suit the Engine.

IT is a well-known fact that there is one speed, and one speed only, at which a petrol engine will give its greatest horse-power. This speed is not the same in every make of engine nor even in every individual engine of the same make and size.

A motor cycle engine owes its capacity for producing a large power output principally to its ability to revolve at a very high speed, but this is not the only thing to be taken into consideration. If it were so the highest possible speed of the engine would be also the speed at which it gave out its highest power. In actual practice the power curve rises quickly with the speed up to a certain point, then it begins to rise more slowly, and soon after reaching its critical speed it begins to drop again.

It is the ambition of designers to produce a power curve which shall approximate as nearly as possible to a straight line, and in this they have been wonderfully successful up to a certain point, but no one has yet produced an engine of which the power curve continues to rise right up to the extreme limit of its speed when running light.



Power curve of the Barr & Stroud single sleeve valve engine up to 4,000 r.p.m.

### Mean Effective Pressure.

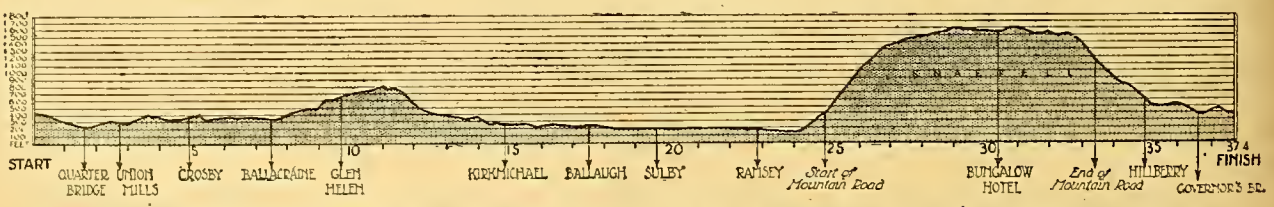
This is because r.p.m., though immensely important, are not the only *desiderata* which have to be considered in the design of a petrol engine. The mean effective pressure, sometimes known as $\eta$ (eta) P. or M.E.P. must also be taken into account, and when the engine speed increases beyond a certain point the M.E.P. begins to fall off until presently the extra power gained by the increased "revs." is more than counterbalanced by the falling off of the pressure on the piston. The cause of this is the impossibility of getting a full charge of gas into the cylinder in the very limited time during which the inlet valve is open.

It is possible to increase the mean effective pressure at high speeds by enlarging the induction passages and inlet valves, and the power curve of the Barr and Stroud engine is a very excellent one largely because the inlet and exhaust ports open very quickly, and when open are of large area in proportion to the size of the engine.

### Maintenance of Power.

For touring purposes a slight falling off of power under certain conditions of road and gradient does not very much matter so long as the rider has sufficient power at his disposal to climb the steepest hills at a reasonable pace and to indulge in an occasional speed burst when a suitable opportunity occurs. It is very seldom that a motor cyclist on tour keeps his throttle wide open for many minutes at a time or even desires to do so.

In the Tourist Trophy races, however, a different set of conditions is to the fore; the laws are, some of them, in abeyance for the time. An open throttle is then the rule rather than the exception and, other things being equal, the engine that maintains the



Contour of the T.T. course. It will be seen there is a rise to 1,600 ft. in five miles between Ramsey and the Bungalow Hotel.

**Gear Ratios for the T.T. Course.—**

greatest power will be successful. We have already seen that the extreme power output necessitates the maintenance of a certain engine speed which differs in different engines. This can only be done to perfection by the provision of an infinitely variable gear and a very skilful use of it.

Now, although a machine so fitted has won the T.T., this type of gear and transmission has lost some of its popularity; chain drives were very much in evidence last year, and no doubt will be again this year.

### Choosing the Gears.

When a manufacturer is choosing the gears for the machines, which he purposes to sell to the general public, he is beset with many difficulties. He knows, of course, the power of the engine and the weight of the bicycle, but he does not know the weight of the rider, the nature of the country in which it will be used, the steepest hill that it will be required to climb, nor even whether or not a sidecar will be attached.

With so many unknown quantities the choice of gears must be very much in the nature of a compromise. One of the gears must be low enough to climb practically anything with the machine heavily loaded. This means a really low bottom gear and large steps between the different ratios, say 15, 10, and 5 to 1. An alternative is sometimes allowed which takes the form of a gear box having closer ratios somewhere in the neighbourhood possibly of 10, 7½, and 5 to 1, and this is most certainly an advantage to the sporting solo rider who does not intend to fit a sidecar to his mount.

In the case of the T.T., however, some of these difficulties disappear. The manufacturer knows not only the power of the engine and the number of "revs." per minute at which it will develop its greatest horse-power, but he knows also the weight of the rider, the course over which the machine has to run, and the speeds which he wishes to obtain over different parts of the course, and he can therefore proceed to set out his gear ratios accordingly.

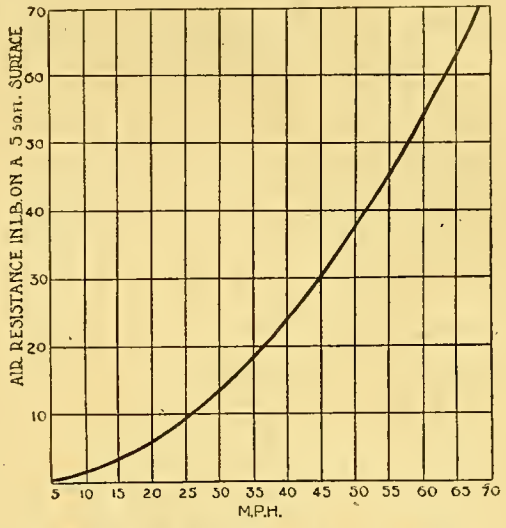
### Some Simple Calculations.

There is in "Motor Cycles and How to Manage Them" a useful and simple formula designed to give the most suitable gear ratio for a touring machine climbing a 1 in 10 gradient, which is as follows:

$$\left(3 + \frac{0{\cdot}05 \times \text{weight of machine and rider}}{\text{b.h.p.}}\right) \text{ to 1.}$$

To give an example, a 4 h.p. motor weighing 250lb. and carrying a 150lb. rider will need a gear of $3+\frac{0{\cdot}05 \times 400}{4}$ to 1, that is 8 to 1, and if the speed be 30 m.p.h. the number of "revs." per minute will be 3,120, provided that 26in. wheels are used, as can be readily obtained by reference to a table of engine "revs." and miles per hour in the same book.

The manufacturer can, however, approach this problem in a more scientific manner. We will suppose that a T.T. rider and his machine oppose about 5 sq. ft. to the resistance of the air and that the Eiffel formula $R = {\cdot}003\,AV^2$ will meet the case, as a motor cycle and its rider are not a good example of streamlining. Combining these in a single formula we get $R=\frac{3}{2}\left(\frac{V}{10}\right)^2$ which is plotted out in the accompanying graph.



Curve showing the air resistance on a surface of 5 sq. ft. to a speed of 70 m.p.h.
$\left(\text{Formula: } R=\frac{3}{2}\left(\frac{V}{10}\right)^2\right)$

Reference to this graph will show that at 60 m.p.h. the air resistance $R=54$lb. The road resistance may be taken as 50lb. per ton, and, if we again assume that the machine and rider weigh 400lb., this works out to nearly 9lb. or a total of 63lb. resistance on a level road. The power needed for this is $\frac{63 \times 88}{550}=$ 10.08 h.p., and if the engine is capable of exerting 15 h.p. at its best speed we have 4.92 h.p. available for hill-climbing. Suppose the gradient to be 1 in $x$, then $x=\frac{88 \times 400}{4.92 \times 550}=13$, and therefore 1 in 13 may be climbed at 60 m.p.h., and the gear ratio may be determined from the table to which I have referred. Supposing the critical engine speed be 3,900 r.p.m., then a 5 to 1 gear will give the required speed.

On a steeper gradient a lower gear will give a better result although a much steeper hill could be climbed on the 5 to 1 gear. It must be noted that 60 m.p.h. is not necessarily the limit of the machine's speed capabilities on the above gear, for 3,900 r.p.m. is not the limit of engine speed but merely that speed at which the greatest h.p. is developed.

The same sort of reasoning can be applied to the steeper gradients, remembering that here the greater part of the available horse-power will be required for climbing and less for overcoming wind resistance. For instance, when climbing a 1 in 4 ascent at about 40 m.p.h., 11 h.p. is needed for climbing and about 3½ h.p. for overcoming air resistance and tractive effort. On the other hand, about 70 m.p.h. will be the absolute limit of this machine on the level, and this would require a gear of 4.3 to 1. On a down grade the speed might rise to 80 m.p.h. and the engine revs. to upwards of 5,000.

### Stockport and District M.C.

The club is holding a 50-mile reliability run on Saturday, the premier award being the "Fildes" Challenge Trophy.

### East London M.C.C.

All applications for membership of this club should now be made to Mr. R. Van Boolen, 63, Baron Road, Chadwell Heath, London.

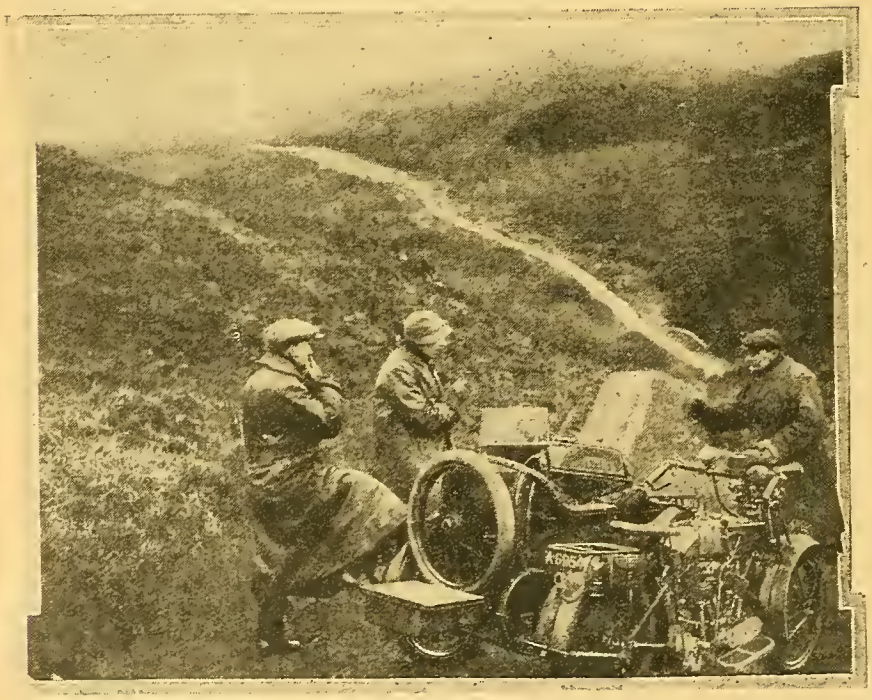
### West Kent M.C., Canterbury and District M.C.C. and Rochester M.C.C.

At a joint meeting of these clubs it was decided to combine for the purpose of holding various competitions during the coming season. The programme of fixtures includes hill climbs, reliability trials, and a race day at Brooklands, thus catering for all tastes.

### Eccles and District M.C.C.

Not often do motor cyclists enjoy punctures, but on the occasion of the recent annual dance of this club the bursting of many balloons provided considerable amusement. The event followed the annual dinner, and, altogether, the evening was a great success.

An appreciative reader of "The Motor Cycle" who appropriately disguised himself as a letter "T" to attend the recent masked ball organised by the Manx Motor Club to assist the fund for the T.T. races.



The trials committee of the Western M.C.C. (Glasgow) has spent much time arranging a route for the club's Two-Day Easter Trial. Much of the course embraces new ground. Mr. W. N. Simpson, president of the club, and two members inspecting one of their "finds."

### Western M.C.C. (Glasgow).

On April 15th and 17th the club will hold a two-day reliability trial. The course is one which has not been included in any previous reliability trial, and is through magnificent loch and mountain scenery.

### Proposed Saltash M.C.C.

Abont a dozen enthusiasts attended a meeting at the Y.M.C.A., Saltash, to form a local club. Those interested should communicate with the acting secretary, Mr. S. H. Squires, 90, Fore Street, Saltash.

### St. Albans and District M.C.C.

With headquarters at St. Peter's Institute, Hatfield Road, St. Albans, a new local club has been formed as above. Runs will be arranged for Tuesdays, Thursdays, and Saturdays. Fuller particulars may be obtained from the hon. secretary, Mr. A. Branfield, "York House," 1, Approach Rd., St. Albans.

### Larkhall and District M.C.C.

At the annual general meeting the office-bearers for 1922 were appointed as follows:—President, Mr. John Ireland, Longlea, Netherburn; vice-president, Mr. Robt. Brown, Skellyton Farm, Larkhall; captain, Mr. Robert Thomson, Cherryhill, Larkhall; vice-captain, Mr. Robert Kirkwood, Hillsview, Larkhall; secretary, Mr. W. R. Gold, Hareleeshill, Larkhall. A committee of ten was also appointed.

### Eastern Counties M.C.

Club secretaries and others interested are asked to note that at the annual general meeting Mr. J. W. Percival, 5, Ruby Road, Walthamstow, E.17, was appointed the secretary of the club. The club was founded by him and others in 1914 as a social body, the only stipulation being that for membership one is not a professional competition rider or a direct representative of the trade for advertising purposes. Lady members are also admitted.

### Cardiff M.C.C.

On Monday of last week a very successful general meeting was held at the club's new headquarters, the Motor House, Wood Street. Several new members were enrolled, and a comprehensive programme of events was arranged for the season 1922. Owing to the number of applications from members whose half-day is Wednesday, for events to suit them, a "Wednesday Sports Committee" was appointed, under the supervision of Mr. E. R. Mitchell, hon. sports organiser, 29, Llanfaen Road, Canton, Cardiff.

### Waterloo and District M.C.C.

A club, as above, has been formed in Waterloo, near Liverpool, for motor cycles and light cars. Communications should be addressed to Mr. G. Marmion, Rossie, Crosby Road, Waterloo, Liverpool.

### Burton M.C. and L.C.C.

*Broken gudgeon* fish, biscuits (*Palmer Cord*), and cheese (*U-nead-it*) were among the items on the menu of the recent annual dinner at the Queen's Hotel; the Mayor of Burton took the chair in the absence of Col. John Gretton, M.P.

### North Cheshire M.C. and L.C.C.

At a recent meeting of the members it was decided that a slight alteration be made in the name of the club, the title to be as above. Further fixtures in the way of runs and contests are to be arranged, and there is every prospect of the club having a successful season.

### Wellingborough, Rushden, and District M.C.C.

There was a good attendance, which included members of the Peterborough Club, at a recent meeting at the Exchange Hotel. The hon. secretary (Mr. W. A. Fathers) presented his annual report, which, he said, was one of which any club might be justly proud. He also introduced the matter of the formation of a county club, and explained that considerable feeling was in favour of such a step.

### Western Centre A.C.U.

Followed by the annual dinner, the annual general meeting was held at the Plough Hotel, Cheltenham, on the 4th inst. The usual routine was gone through, and officers were elected to the Centre Board for 1922.

About eighty members and friends attended the dinner, Mr. C. T. Pearce, president, being in the chair, supported by Major Dixon Spain, Major Vernon Brook, and the officers of the Western Centre Board.

### Essex County and Southend A.C.

Deplorable weather attended the opening paperchase on the 4th inst., but the majority voted against postponement.

M. Cotgrove (3½ Douglas) and G. Duncan (3 A.B.C.) were first and second respectively.

### Ilford M.C.C.

A half-day trial will be held on April 1st. The course, entirely in Essex, will be three laps of a twenty-mile route, starting and finishing at Abridge. Acceleration, slow running, and easy starting tests are included. Further particulars may be obtained from the competition secretary, Mr. A. E. Sweetingham, 25, Christchurch Road, Ilford.

### Ilkley M.C. and L.C.C.

With the elimination of the present sections into which the wide area covered is divided, a distinct change in the future policy of the club was decided upon at the annual meeting held in the Lister's Arms Hotel, Ilkley, on Monday, the 27th ult. The section system has been carried on for two years, but it has been realised for some years that it was not working out as successfully as had been hoped.

Mr. J. N. Longfield, who presided, in introducing this subject, said he was the one responsible for the idea of forming the club into districts, for he, and the committee at that time, had thought that it would lead to greater keenness in the competitions, and, by establishing district secretaries, would relieve the general secretary of much of his work. In practice, after two years' trial, they found that the system had not achieved either of these objects. Some of the district secretaries had worked very hard as members of the committee, others had not worked at all, and they had come to the conclusion that the only way to continue the club successfully was to get back to the old idea of a single club and a working committee which would do the work.

A proposal to return to the old system, made by Mr. G. Clapham, and seconded by Mr. K. Dawson, was only carried after a good deal of discussion.

### Ealing and District M.C.C.

The dates of the London-Holyhead Trial have been definitely fixed as April 21st and 22nd. This event will be open to any member of the South-eastern Centre A.C.U.

### Derby and District M.C.

An appreciative audience of nearly 200 was present at the Technical College on Tuesday, the 28th ult., to hear a lecture by Mr. R. Smurthwaite, of Binks and Co., Eccles, on "Carburation," Mr. R. W. Reid, O.B.E., M.I.Mech.E., occupied the chair.

### Wallington and District M.C. and L.C.C.

On Saturday next a half-day sporting trial will be held, starting from the Triangle, Wallington, at 2.30 p.m. Entries must be received by the trials secretary, Mr. Arthur Houghton, Woodcote Parade, Wallington, accompanied by an entrance fee of 5s., not later than to-morrow.

### Bradford M.C. and L.C.C.

Over one hundred members were present at the very cordial general meeting held at the Belle Vue Hotel, Bradford, on the 2nd inst., the President (Mr. J. E. Fearnley) occupying the chair.

Mr. T. G. Bullus (trials hon. secretary) briefly outlined the competition programme for 1922, which will comprise all the popular events, including the usual freak hill-climb at Rosedale Abbey Bank. Miss Pickles (Morecambe) will present a cup to be won outright for lady riders only in the annual London and back run, and the club will offer at least ten other trophies, to be won outright, all presented by members. A special effort will be made to cater for lady motor cyclists; the club has fourteen at present, and two, Mrs. Appleton (Bradford) and Miss D. B. Sayles (Barnsley), were enthusiastically added to the committee. The Hon. Treasurer (Mr. W. J. R. Lee) presented a balance sheet showing £300 credit, and, needless to say, all the officials, including the committee, were unanimously re-elected *en bloc*.

As this picture of the start of a recent Midland run proves, blustering March gales do not prevent the keen member from attending his club's opening event.

# MOTOR CYCLES FOR ALL PURSES.

## Second-hand Prices Arranged in Order of Value. "Bargain Sale Figures" Popular: A Curious State of Affairs.

POTENTIAL buyers of motor cycles will be interested in the following table of second-hand prices culled from the classified advertisements in *The Motor Cycle* of last week. Machines are available at prices ranging from £10 to £210, and by glancing at the subheads the reader may find out just what type (and date) of vehicle is available at any predetermined figure.

Most remarkable is the way in which practically *all* the machines priced at over £50 are offered at more than £5 in excess of round figures. Thus £55, £56, £57, £58, etc., are common, but not £51, £52, £53, etc. This would indicate that the seller who thinks his machine is worth, for example, £52, either brings it down to £50, or £48-£49, which, at a glance, looks much less, or up to £58-£59, which does not seem much more!

### £10 to £20.

| | | |
|---|---|---|
| £10 | | 3½ h.p. Minerva. |
| £12 | | 3½ h.p. Rex. |
| £16 | 1913. | 2¾ h.p. Enfield Twin. |
| £17 | 1920. | 1¾ h.p. J.E.S. |
| £18 | | 3½ h.p. Triumph. |
| £18 | | 3½ h.p. Triumph. |
| £18 | 1912. | 3½ h.p. Brown. |
| £20 | | 5-6 h.p. F.N. |

### £21 to £30.

# If your thoughts are turning to a small car

**All types of small and economical cars** are fully and prominently dealt with in 'The Autocar.'

Not only does it give detailed illustrated descriptions of new small cars, and accounts of road tests of both new and established models, but also hints on running and maintenance, costs of running and upkeep, and news of general interest to owners or prospective buyers of light cars.

"Small Car Talk" by "Runabout" —a special article by a well-known private owner appears each week.

**you cannot do better than study the pages of**

The Autocar
FOUNDED 1895

*The Leading Motoring Journal*

"The Autocar" is the *complete* journal; it embraces every phase and aspect of motoring, dealing in an equally thorough manner with light, medium and large cars, each issue being attractively illustrated.

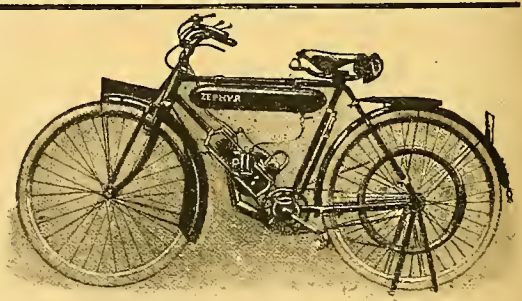
# THE "ZEPHYR" Motor Cycle

The King of Lightweights. - - - - - Weight under 70 lbs.
Strong. - Elegant. - Absolutely reliable. - Fully guaranteed.



**PRICE 25 GUINEAS**

Can be used as Pedal Cycle or Motorcycle at will. Will carry a rider of average weight up all but freak hills without pedalling, and do over 20 miles per hour on level if required.

The retention of Pedal gear gives the rider absolute confidence in traffic and when negotiating awkward corners.

Chain cum Belt drive. Ball Bearings to Crankshaft and Countershaft. Engine 1¾ h.p. two-stroke, the power of which is ample for the purpose.

"*The Proof of the Pudding is in the eating*" says "The Motor Cycle" of March 2nd, 1922, in describing a novel Tricar which has been propelled "*8,000 no trouble miles*" by one of these wonderful little Engines. Mr. H. A. D. Joseph of London and his 3 children were the passengers. Mr. Joseph is an ordinary Cyclist, not a professional rider.

# *The* "ARGUS" SILENCER

## for open exhaust pipes

THE patent silencer is made of aluminium, on account of its lightness and heat dispersing qualities.
DELIVERIES can be made 7 days from receipt of order.
Full satisfaction guaranteed or money returned.
Guaranteed no loss of power.

Price **20/-** each *delivered.*

Silence your Engine without loss of power by purchasing one of our Patent Silencers.

*Agents wanted.*

**Copies of Testimonials received *re* PATENT ALUMINIUM "ARGUS" SILENCER.**

"*Re* the Silencer supplied to me some time ago I must say I am more than satisfied with it as I am the possessor of a particularly noisy type of 550 single machine and have previously experimented with numerous silencing arrangements. Except for mechanical noises, valves, c/s chain, etc., when travelling there is no appreciable sound at all, nor does the power appear to be in any way affected. In conclusion I must state I never got better value for my money."

"With reference to the Silencer with which you supplied me I can assure you that it has given every satisfaction. With regard to its silencing powers they are all that could possibly be wished for. The most commendable point is that there is no noticeable loss of power through back pressure."

"I am entirely satisfied with the 'Argus' Silencer you have supplied to me, and your claims as to silencing and elimination of back pressure without loss of power are quite true. The bike runs very well at high speeds—in fact better than with the Standard Silencer as supplied with my machine and there is apparently no back pressure at all. This is rather remarkable and gives much credit to the design, as with so many baffles one would expect inefficient running. The absence of noise is extremely gratifying and I am recommending the 'Argus' to my friends with every confidence." LEICESTER.

"I have fitted your Silencer to a Jap, and up to now it has given me every satisfaction. It has accounted for no loss of power—I should say it has increased the power somewhat, or it seems so. It makes quite an improvement to the machine and I shall certainly recommend it to my friends in the Motor Club. I shall probably give you an order for another Machine which I am overhauling."

LITTLE CHEVERELL.

"Referring to the 'Argus' Silencer that I ordered from you, I now take the pleasure in letting you know that it is everything in the way you claim for it, and I am highly pleased with it, and it is giving every satisfaction. I will recommend to anyone with whom I come in contact."

# Engineering Production

**THE future of the British Engineering Industry lies largely in the hand of the young Engineer now training for his life's work.**

For many years Great Britain was the workshop of the world, and in the height of her industrial supremacy the demand for British-made Goods came from all parts of the Globe. Quality was the secret of this success.

In the Industrial World to-day many nations have acquired special proficiency in the production of high class Engineering specialities, and it is essential for the future well-being of the British Engineering Industry that, while quality should be maintained, production costs must be reduced, in order to enable our industry to compete with the Engineering industries of other countries.

It is essential therefore that the British Engineer of to-day should be trained on two parallel lines, i.e., to realise that success comes only from maintaining quality, and to aim at producing that quality at the lowest possible cost.

**The rôle of "ENGINEERING PRODUCTION" is to indicate to the Engineer the best means of producing the highest class of goods at the lowest production cost, and, therefore, this Publication is of great value to the young Engineer.**

**By the assimilation of practical information this Engineer will acquire right ideas respecting modern Works Practice, Administration and Control. Material assistance is rendered him by this Journal in acquiring the right angle from which to look at his work.**

**"ENGINEERING PRODUCTION" is obtainable from all Bookstalls and Newsagents at 6d. weekly.**
